## SECTION 1: INTRODUCTION

This Consistency Checklist and attached supporting documents have been prepared to determine whether and to what extent the City of Pleasanton 2023-2031 (6th Cycle) Housing Element Update Program Environmental Impact Report (State Clearinghouse No. 2022040091) addresses the potential impacts of the proposed Vineyard Avenue Residential Project (proposed project), and whether the proposed project qualifies for an exemption from additional environmental review due to its consistency with the development density and land use characteristics established by the City as required under the California Environmental Quality Act (CEQA) (Public Resources Code [PRC], § 21000, *et seq.*).

The proposed project consists of the subdivision of the approximately 10.64-acre project site, identified by Assessor's Parcel Number (APN) 946-4619-1, into 27 residential lots and one park lot. Each residential lot would be developed with a single-family residence with a two-car garage and a one-car garage each, a porch, and a patio, as well as an accessory dwelling unit (ADU). The proposed project would also include amenities, such as a three-acre publicly accessible, privately maintained park/open space area located in the northern three acres of the project site. The park area would include a gathering space, open play turf area, and tot lot. In addition, a bioretention area would be located along the northern site boundary. Primary site access would be provided by a new driveway off Thiessen Street and would connect to an internal roadway system.

### 1.1 - CEQA Assessment

Pursuant to California Environmental Quality Act (CEQA) Guidelines, (Public Resources Code [PRC] § 21000, *et seq.*), an Environmental Impact Report (EIR) and a Mitigation Monitoring and Reporting Program (MMRP), was prepared and certified by the City of Pleasanton (City) on January 26, 2023 (City of Pleasanton 2023-2031 (6th Cycle) Housing Element Update Program Final Environmental Impact Report, State Clearinghouse No. 2022040091). This document will be referred to as the Housing Element Update FEIR throughout this consistency checklist. The Housing Element Update FEIR considered 25 sites for rezoning, and 20 of those sites were included in the Housing Element Update adopted by the City of January 26, 2023. Because the Housing Element Update FEIR analyzed all 25 sites, some of those sites are referred to in the discussion below even though they are not included in the Housing

Element. The proposed project considered herein is located on the site identified as PUSD-Vineyard (Site 27), the southern seven acres of which would be developed with residential uses. The following Consistency Checklist has been prepared pursuant to CEQA Guidelines Section 15183 (Projects Consistent with a Community Plan or Zoning) to determine whether the proposed project requires additional environmental review. CEQA Guidelines Section 15183 mandates that projects that are consistent with the development density established by existing zoning, community plan, or general plan policies for which an FEIR was certified (in this case the Housing Element Update FEIR) shall not require additional environmental review, except as might be necessary to examine whether there are project-specific significant effects that are peculiar to the project or its site. Section 15183 specifies that examination of environmental effects shall be limited to those effects that: (1) are peculiar to the project or the parcel on which the project would be located, and were not analyzed as significant effects in a prior EIR on the zoning action, general plan, or community plan, with which the project is consistent, (2) are potentially significant off-site impacts and cumulative impacts which were not discussed in the prior EIR prepared for the zoning action, general plan, or community plan, or (3) are previously identified significant effects which, as a result of substantial new information which was not known at the time the EIR was certified, are determined to have a more severe adverse impact than discussed in the prior EIR.

Section 15183(c) further specifies that if an impact is not peculiar to the parcel or to the proposed project, has been addressed as a significant effect in the prior EIR, or can be substantially mitigated by the imposition of uniformly applied development policies or standards, then an additional EIR need not be prepared for that project solely on the basis of that impact.

## **1.2 - Summary of Results**

As illustrated by the following Consistency Checklist, the proposed project is found to be in conformance with the analysis and conclusions of the Housing Element Update FEIR. This determination is based on the following criteria:

1. There are no new significant effects peculiar to the proposed project or its site;
2. There are no new significant effects that were not previously evaluated in the Housing Element Update FEIR;
3. There are no new significant off-site or cumulative impacts that were not analyzed in the Element Update FEIR, and

4. There are no adverse impacts that are more severe than those previously identified in the Element Update FEIR.

The following mitigation measures identified in the Housing Element Update FEIR are applicable to the proposed project, as described in each environmental topic:

- Mitigation Measure AIR-1a and AIR-1b
- Mitigation Measure GEO-6
- Mitigation Measure NOI-1
- Mitigation Measure NOI-2

This evaluation concludes that the proposed project qualifies for an exemption from additional environmental review under Section 15183 because it is consistent with the development density and land use characteristics established by the City, as analyzed by the Housing Element Update FEIR. Further, the Housing Element Update FEIR adequately anticipated and described the impacts of the proposed project, identified applicable mitigation measures necessary to reduce project-specific impacts, and the proposed project would implement these mitigation measures.

The Housing Element Update FEIR is available at:

City of Pleasanton  
200 Old Bernal Avenue  
Pleasanton, CA 94566-0802

## **SECTION 2: PROJECT DESCRIPTION**

### **2.1 - Project Details**

#### **1. Project Title and Number**

Vineyard Avenue Residential Project (P24-0596)

#### **2. Lead Agency Name and Address**

City of Pleasanton  
Community Development Department  
200 Old Bernal Avenue  
Pleasanton, California 94566-0802

#### **3. Contact Person and Phone Number**

Emily Carroll, (925) 931-5608

#### **4. Project Location and Assessor's Parcel Number (APN)**

1 Vineyard Avenue  
Pleasanton, CA 94588  
Assessor's Parcel Number (APN) 946-4619-1

#### **5. Project Sponsor's Name and Address**

Trumark Homes  
3001 Bishop Drive, Suite 100  
San Ramon, California 94583

#### **6. General Plan Designation**

Other Public Institutional with a Housing Elements Sites Overlay (HEO)

#### **7. Zoning and Density**

Planned Unit Development (PUD) – Elementary School; 3.6 dwelling units per acre (du/acre)

#### **8. Description of Project**

The proposed project would include subdividing the southern seven acres of the project site into 27 residential lots ranging in size between 8,513 to 15,591 square feet (sf). Each lot would be developed with a single-family residence, each with one two-car garage, one one-car garage, a porch, and a patio, as well as an ADU. Each single-family residence would range between 3,386 to 3,390 sf and would follow one of two floor plan types, while each ADU would range between 583 and 611 sf in size. The proposed project would also include amenities, such as a park/open space area located in the northern

portion of the project site, adjacent to Vineyard Avenue. The park area would include a gathering space, open play turf area, and tot lot. The proposed project would also include a bioretention area located along the northern site boundary. Primary site access would be provided by a new driveway off Thiessen Street, which would connect to an internal roadway system.

## **9. Requested Permits/Approvals**

The proposed project would require City approval of a Vesting Tentative Subdivision Map and Design Review.

## **2.2 - Project Location and Setting**

### **2.2.1 - Location**

The approximately 10.64-acre project site, identified by APN 946-4619-1, is located at 1 Vineyard Avenue in the City of Pleasanton, California (see Exhibit 1).

### **2.2.2 - Existing Environmental Setting**

#### **Project Site**

The site is currently undeveloped and includes grasses and forbs that are regularly disked, shrubs, and 10 on-site trees. The site is bound by Vineyard Avenue to the north, Manoir Lane to the east, Thiessen Street to the west, and Old Vineyard Avenue to the south.

#### **Surrounding Land Uses**

Surrounding existing land uses include open space to the north, across Vineyard Avenue, and the Cemex-Pleasanton Eliot Aggregates Quarry further to the north; a vineyard and single-family residences to the east, across Manoir Lane; single-family residences to the south, across Old Vineyard Avenue; and a vineyard and single-family residences to the west, across Thiessen Street (see Exhibit 2).

### **2.2.3 - Land Use Designation and Zoning**

The City of Pleasanton General Plan designates the project site as Other Public Institutional with an HEO and the site is zoned as PUD – Elementary School. The project site is located within the Vineyard Avenue Corridor Specific Plan area.

## **2.3 - Project Background and Previous Environmental Review**

### **2.3.1 - General Plan Housing Element**

Concurrent with adoption of the Housing Element Update on January 23, 2023, the City Council also adopted the necessary General Plan amendments to allow residential development at the prescribed density on the various potential housing sites. These sites are included as Housing Element Sites Overlay in the General Plan Land Use Map and development on the sites must comply with the site-specific densities set forth in the Housing Element. These sites would be subject to the applicable design standards established by the City with the intent of ensuring well-designed and attractive projects that minimize aesthetics impacts.

The City has adopted Objective Design Standards (ODS) to implement development consistent with the Housing Element, applicable to each of the potential sites for housing which, among other components, include standards that regulate height, setbacks massing, site planning, lighting, landscaping and building design to ensure that projects will be compatible with their surroundings, attractively designed and landscaped, and minimize impact to aesthetic resources. Each project would be required to comply with the adopted ODS. The City's Housing Element Update and the associated EIR anticipated the project site to be built out with residential uses under the HEO at a density of three to four du/ac, for a total unit count between 21 and 28 units.

### **2.3.2 - Housing Element Update Final Environmental Impact Report**

The City prepared a Program EIR for the Housing Element and related General Plan amendments and certified the Housing Element Update FEIR on January 26, 2023. The Housing Element Update FEIR identified significant environmental effects that could result from implementation of the Housing Element as well as ways the impacts could be reduced to less than significant through implementation of applicable regulations and mitigation measures. It also identified significant and unavoidable environmental impacts related to vehicle miles traveled (VMT) and water supply and adopted a Statement of Overriding Considerations for each significant and unavoidable impact prior to approving the project. The Housing Element Update FEIR's conclusions are summarized in Section 4 of this document.

## **2.4 - Project Characteristics**

The following provides a description of the proposed project components.

### **2.4.1 - Development Summary**

The proposed project would include subdividing the project site into 27 residential lots and one park lot (see Exhibit 3). Each residential lot would be developed with a single-family residence, each with one two-car garage, one one-car garage, a porch, and a patio, as well as an ADU (see Exhibit 4). Each single-family residence would range between 3,386 to 3,390 sf and ascribe to one of two floor plans, while each ADU would range between 583 and 611 sf in size. Of the 27 proposed single-family residences, 14 would have four bedrooms and 3.5 bathrooms, and 13 would have five bedrooms and 4.5 bathrooms. The proposed project would also include on-site amenities, such as a park/open space area located in the northern portion of the project site, adjacent to Vineyard Avenue. The park area would include a gathering space, open play turf area, and tot lot on approximately one acre. The remaining two acres would include a combination of fruit trees, vineyards, lavender, and landscape planting intertwined with natural walking trails as a buffer between the proposed park area and Vineyard Avenue. In addition, the proposed project would include a bioretention area located along the northern site boundary.

### **2.4.2 - Design and Appearance**

The architectural character of the proposed homes would be a contemporary French style intended to compliment and blend with the two existing adjacent residential neighborhoods. Each building would be two-story and range between 29 feet, five inches and 30 feet, nine inches in height. In addition, the proposed project would include fences between each of the proposed residences along the proposed lot subdivision boundaries, including a combination of four-foot wood rail fencing, retaining walls, six-foot neighbor fences, and neighbor fences on retaining walls (see Exhibit 5).

### **2.4.3 - Landscaping**

Landscaping would be provided along the project frontages, as well as along the proposed internal roadway system. On-site landscaping would include various new trees, including blue oaks and valley oaks (see Exhibit 6). In accordance with Section 17.14.006 of the City's Municipal Code, on-site landscaping shall be required to incorporate water efficient landscaping. Decorative buffer landscaping would also be provided between the residential portion of the site and the proposed park/open space area (see Exhibit 7).

## **2.4.4 - Access and Circulation**

### **Vehicular Circulation**

Project site access would be provided by a new 56-foot-wide driveway from Thiessen Street. From the site entrance, 56-foot-wide public streets, labeled in Exhibit 3 as A Street and B Court, would provide access to the residences not fronting existing streets. Of the proposed lots, nine would front Manoir Lane, one would front Thiessen Street, and the remaining 17 would be served by the two new internal streets.

### **Alternative Transit**

The bus stop nearest the site is located at the intersection of Vineyard Avenue and El Capitan Drive/Montevino Drive, located approximately one mile west of the site.

### **Pedestrian Access**

Pedestrian access would be provided by way of new sidewalks along both sides of the proposed internal streets. The new sidewalks would connect to existing sidewalks where possible, such as along Thiessen Street. In addition, concrete sidewalks would form walking paths throughout the proposed park area in the northern portion of the project site.

## **2.4.5 - Parking**

Each single-family residence would include a two-car garage and a one-car garage, for a total of 81 garage parking spaces. Each home is designed to include two additional off-street parking spaces on private driveways. Therefore, the proposed project would provide 135 total parking spaces associated with the proposed single-family residences. Furthermore, the nearby streets would allow for an additional 79 on-street parking spaces. Finally, the proposed project would include six bicycle parking stalls within bike racks at the proposed park area.

## **2.4.6 - Utilities**

### **Water and Wastewater**

Water and sewer service would be provided by the City through connections to the existing infrastructure in the project vicinity (see Exhibit 8). Specifically, the proposed project would connect to the existing 12-inch water and eight-inch sewer mains in Thiessen Street, the existing eight-inch sewer mains in Manoir Lane, and the existing eight-inch water line in Old Vineyard Avenue. New eight-inch water and sewer lines would be installed within the new

internal roadways to provide service to each of the proposed residential buildings.

### **Storm Drainage**

As shown in the Preliminary Stormwater Treatment Plan prepared for the proposed project, the project site would be divided into two drainage management areas (DMAs), generally defined as the southern and northern portions of the project site, respectively (see Exhibit 9). Stormwater runoff from the on-site impervious surfaces within the southern DMA (DMA 1) would be directed through a network of 10- to 18-inch storm drain lines to the proposed on-site bioretention basin at the northern site boundary. Stormwater runoff within DMA 2 would flow towards the northern project site boundary and pond three inches before entering a catch basin. The treated on-site stormwater would ultimately be routed to the existing 24-inch storm drain line within Vineyard Avenue.

### **Natural Gas and Electricity**

The proposed project would receive natural gas and electricity services from the Pacific Gas and Electric Company (PG&E). On-site gas and electricity infrastructure would connect to the existing infrastructure in the project vicinity.

### **Telecommunications**

Telephone services would be provided through AT&T and cable television services would be provided by Comcast. Such services would be provided to the project site through connections to existing infrastructure in the project vicinity, such as overhead phone lines.

## **2.5 - Discretionary Approvals**

The City of Pleasanton has discretionary authority over the proposed project and is the CEQA Lead Agency for the preparation of this Section 15183 Checklist. In order to implement the proposed project, the following City approvals would need to be granted:

- Vesting Tentative Subdivision Map.
- Design Review.

## **SECTION 3: CEQA GUIDELINES SECTION 15183: PROJECTS CONSISTENT WITH A COMMUNITY PLAN OR ZONING**

CEQA Guidelines Section 15183 establishes that projects that are consistent with the development density established by existing zoning, community plan, or general plan policies for which an FEIR was certified shall not require additional environmental review, except as might be necessary to examine whether there are project-specific significant effects that are peculiar to the proposed project or its site. Section 15183 streamlines the review process by providing a statutory exemption for consistent projects and reduces the need to prepare repetitive environmental studies.

### **Proposed Project Qualifies for No Further Environmental Review Under CEQA Guidelines Section 15183**

CEQA Section 15183 applies to the proposed project since it is consistent with the General Plan, as amended in conjunction with the 6th Cycle Housing Element Update, for which an EIR has been certified.

The City of Pleasanton adopted the Housing Element Update and certified the Housing Element Update FEIR on January 26, 2023. The southern seven acres of the project site is included in the Housing Element Update FEIR as PUSD-Vineyard (Site 27).

The General Plan designates the project site Other Public Institutional with an HEO, which allows a maximum of three to four du/acre. The project site is approximately 10.64 acres, of which approximately 7.64 acres would be developed with a total of 27 single-family residences. As a result, the proposed project's 3.6 du/acre density is within the allowable use of the Other Public Institutional with an HEO designation. The project site is zoned PUD – Elementary School. While the project site was not rezoned as part of the Housing Element Update, because the proposed residential development would occur within the HEO area, the proposed project would be consistent with the City's anticipated on-site development.

## SECTION 4: CONSISTENCY CHECKLIST

CEQA Guidelines Section 15183(b) states that:

In approving a project meeting the requirements of this section, a public agency shall limit its examination of environmental effects to those which the agency determines, in an initial study or other analysis:

- (1) Are peculiar to the project or the parcel on which the project would be located;
- (2) Were not analyzed as significant effects in a prior FEIR on the zoning action, general plan, or community plan, with which the project is consistent;
- (3) Are potentially significant off-site impacts and cumulative impacts which were not discussed in the prior FEIR prepared for the general plan, community plan or zoning action, or
- (4) Are previously identified significant effects which, as a result of substantial new information which was not known at the time the FEIR was certified, are determined to have a more severe adverse impact than discussed in the prior FEIR.

The following pages of this document contain a Consistency Checklist that examines the proposed project's potential environmental effects within the parameters outlined in CEQA Guidelines Section 15183(b). The "Prior FEIR" used for comparison is the Housing Element Update FEIR certified by the City of Pleasanton on January 23, 2023, including all impact determinations and significance thresholds utilized therein.

Environmental Issue Area	Housing Element Update FEIR Determination	Effect Peculiar to Project or Site?	New Significant Effect?	New Significant Off-site, Cumulative Impact?	New Information, More Severe Adverse Impact?
<p><b>I. Aesthetics</b>                      Except as provided in Public Resources Code Section 21099, would the project:</p>					
a) Have a substantial adverse effect on a scenic vista?	Less than significant impact	No	No	No	No
b) Substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic building within a State Scenic Highway?	Less than significant impact	No	No	No	No
c) In non-urbanized areas, substantially degrade the existing visual character or quality of public views of the site and its surroundings? (Public views are those that are experienced from publicly accessible vantage point). If the project is in an urbanized area, would the project conflict with applicable zoning and other regulations governing scenic quality?	Less than significant impact	No	No	No	No
d) Create a new source of substantial light or glare which would adversely affect day or nighttime views in the area?	Less than significant impact	No	No	No	No

**a) Scenic Vista**

Would the project: *Have a substantial adverse effect on a scenic vista?*

**Summary of Housing Element Update FEIR**

The western edge of the City is composed of the Main and Pleasanton Ridges, which provide views of wooded hillsides and ridgelines. Additionally, the Arroyo de Laguna runs along the western edge of Interstate 680 (I-680). The City's arroyos and canals are considered defining features that open up vistas to distant hills and provide open spaces. The southern edge of the City is primarily characterized as rural, and the views of the undeveloped hillsides to the south of the City are considered important visual resources by the General Plan. The eastern edge of the City is considered largely undeveloped with the exception of quarry lands that host sand and gravel operations; however, views of lakes, arroyos, and canals are available to the east of the City, including Arroyo las Positas, Arroyo Mocho, and Arroyo del Valle. Interstate 580 (I-580) creates a distinct northern boundary of the City. Views of scenic resources available to the north of the City include background views of the Blackhawk Hills, part of the Diablo Range, and Mount Diablo.

Views of the scenic resources surrounding the City could be visible from the potential sites for housing,<sup>1</sup> and the Housing Element Update FEIR indicated that development consistent with the Housing Element Update could result in increased intensity, increased height, and greater bulk and mass of buildings, which could partially or fully obscure a presently visible scenic vista, resulting in a potentially significant impact to scenic vistas. Three potential sites for rezoning (Sites 1 [Lester], 22 [Merritt], and 27 [PUSD-Vineyard]), have the greatest potential for visibility from scenic resources, but compliance with Land Use Objectives, Municipal Code requirements, and General Plan and Specific Plan policies would ensure potential impacts are reduced, as discussed below.

The Housing Element Update FEIR concluded that compliance with the applicable goals, policies, and programs included as part of the General Plan, zoning requirements, design guidelines, Objective Design and Development Standards, the design review process, the Vineyard Avenue Corridor Specific Plan, and the Hacienda Design Guidelines, would ensure that the City's scenic resources, including hillsides and ridgelines, would largely be protected from impacts resulting from development facilitated by

---

<sup>1</sup> Consistent with the approach in the Housing Element Update FEIR, potential sites for housing (as opposed to potential sites for rezoning) includes the Dublin-Pleasanton Bay Area Rapid Transit (BART) station property.

the Housing Element Update and impacts would be less than significant with respect to scenic vistas.

### **Proposed Project Analysis and Conclusion**

The City's General Plan generally recognizes hillsides, ridgeland, ridge views, vast open spaces, valleys, arroyos, canals, and City entryways as scenic resources. The eastern edge of the City, where the project site is located, is considered largely undeveloped with the exception of the quarry lands, which host sand and gravel operations. However, views of lakes, arroyos, and canals are available to the east of the City, including Arroyo las Positas, Arroyo Mocho, and Arroyo del Valle. Furthermore, according to the Housing Element Update FEIR, Vineyard Avenue is in a semi-rural area bordered by hills and open space. The vineyard planting and local wineries, including the Ruby Hills Winery at the intersection of Vineyard Avenue and Isabel Avenue, reinforces the existing "wine country" character of the area.

Given that the proposed project would be consistent with the land use designation of the project site, development of the site with residential uses and associated improvements have already been anticipated by the City and considered as part of the Housing Element Update FEIR analysis. The Vineyard Avenue Corridor Specific Plan also establishes standards to preserve the unique environment. Because the proposed project would be subject to the design standards within the Vineyard Avenue Corridor Specific Plan, including the provision of vines within the proposed park, the project would be consistent with Land Use Objective 8 and would ensure that the development emphasizes the rural character of the area. In addition, the proposed project would include trees, shrubs, and other landscaping elements consistent with the City of Pleasanton standards. Such landscape development would contribute to project consistency with Land Use Objective 9 of the Vineyard Avenue Corridor Specific Plan, which requires the establishment of unified site planning, architectural, and landscape development that draws from the character of the area.

Furthermore, the proposed project would not conflict with any General Plan policies related to the preservation of scenic resources. By including landscaping along the proposed internal streets, the proposed project would comply with Community Character Element Policy 9, which requires projects to enhance landscaping along City streets. The proposed project would be consistent with the surrounding existing residential uses and, thus, would not conflict with Community Character Element Policy 17, related to protecting the quality, character, and distinctiveness of residential neighborhoods. The

proposed project would also include a park in the northern portion of the project site, thereby preserving the on-site area with the most potential for existing scenic views and complying with Open Space and Conservation Element Policy 8. The project site is identified within the Housing Element Update FEIR as a site with high potential for views of scenic resources, most likely to the north of the project site where views of hills, ridges, lakes, arroyos, and canals located east of the City could be available. However, development of the proposed project would include the preservation of open space within the northern portion of the project site, thereby preserving any views of scenic vistas north of the project site that currently exist.

Based on the above, effects on scenic vistas have been adequately addressed in the Housing Element Update FEIR and effects peculiar to the project or project site do not exist. Thus, the criteria for requiring further CEQA review are not met.

#### **b) Scenic Highways**

Would the project: *Substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic building within a State Scenic Highway?*

#### **Summary of Housing Element Update FEIR**

The California Department of Transportation (Caltrans) identifies I-680 through the city limits as an officially designated State Scenic Highway. Caltrans identifies I-580 along the northern boundary of the City as eligible for designation as a State Scenic Highway (see Exhibit 3.1-2 in the Housing Element Draft EIR).

The City is surrounded by various scenic resources, including hillsides, ridge views, vast open spaces, valleys, arroyos, and canals. Many of these resources are visible from I-680 and I-580. For instance, views of the Pleasanton Ridgeland are visible to travelers along I-680, as well as westbound passengers along I-580. A significant impact would occur if future development consistent with the Housing Element Update would impact or obstruct views of the City's scenic resources from the eligible or officially designated State Scenic Highways.

The Housing Element Update FEIR indicated that, of the potential sites for housing, Site 22 (Merritt) is located directly adjacent to and west of I-680. There is a 10-foot-tall sound wall on the eastern property line of Site 22 (Merritt) abutting I-680 that would partially obstruct development on Site 22 (Merritt), therefore development would only be partially visible. Sites 1 (Lester)

and 2 (Stoneridge Mall) are located west of I-680 between the highway and the Pleasanton Ridgeland; therefore, development on Sites 1 (Lester) and 2 (Stoneridge Shopping Center, Mall) that is consistent with the Housing Element Update could partially obstruct views of this scenic resource. Additionally, Sites 9 (Metro 580), 11 (Old Santa Rita Area), 12 (Pimlico Area), and 29 (Oracle) and the Dublin-Pleasanton Bay Area Rapid Transit (BART) station property are located adjacent to I-580, and development consistent with the Housing Element Update would be fully visible from the highway, which could damage scenic resources within a State Scenic Highway. All of the sites adjacent to I-580 would be designated as high-density sites, which represents an increase in intensity at each of these sites from existing conditions.

The Housing Element Update FEIR concluded that development applications for subsequent development consistent with the Housing Element Update would be reviewed by the City for compliance with the goals, policies, and programs of the General Plan, applicable specific plans, applicable zoning requirements, design guidelines, and the Scenic Highway Plan, and compliance with these standards would ensure development consistent with the Housing Element Update would not substantially damage scenic resources within view of a State Scenic Highway and impacts would be less than significant.

#### **Proposed Project Analysis and Conclusion**

The project site is located approximately 3.35 miles east of I-680, an officially designated State Scenic Highway, and approximately 2.74 miles south of I-580, which is eligible for designation.<sup>2</sup> Urbanized portions of the City intervene between the project site and I-680, preventing views of the designated Scenic Highway. The project site was not identified by the Housing Element Update FEIR as visible from I-680. Therefore, development of the proposed project would not damage any scenic resources such as trees, rock outcroppings, or historic buildings visible from I-680.

#### **c) Consistency with Scenic Quality Regulations and Visual Character**

Would the project: *In non-urbanized areas, substantially degrade the existing visual character or quality of public views of the site and its surroundings? (Public views are those that are experienced from publicly accessible vantage point). If the project is in an urbanized area,*

---

<sup>2</sup> California Department of Transportation. *California State Scenic Highway System Map*. Available at: <https://caltrans.maps.arcgis.com/apps/webappviewer/index.html>. Accessed January 2025.

*would the project conflict with applicable zoning and other regulations governing scenic quality?*

**Summary of Housing Element Update FEIR***Consistency with Scenic Quality Regulations*

The potential sites for housing, aside from Site 1 (Lester), are located in urbanized areas. The Housing Element Update FEIR indicated that the potential sites for housing are mostly vacant or underutilized parcels, currently developed with a mix of uses including surface parking lots, restaurants, hotels, office buildings, retail, industrial, and warehouse and distribution. The existing land use designations for these sites include residential, commercial, industrial, office, mixed use, community facilities, agriculture, public health and safety, parks and recreation, and public and institutional. The existing zoning designations include agriculture, residential, commercial, office, mixed use, industrial, and public and institutional.

Several of the sites are within the Planned Unit Development (PUD) district, or not otherwise zoned for residential use. As part of the Housing Element Update, the potential sites for rezoning would be rezoned to allow for residential development. To the extent any projects may be subject to review through the PUD process, the PUD zoning would provide flexibility in residential development standards and housing types, in conjunction with the applicable design standards established by the City with the intent of ensuring well-designed and attractive projects that minimize aesthetics impacts.

The Housing Element Update FEIR concluded that compliance with the applicable goals, policies, and programs included as part of the General Plan, zoning requirements, design guidelines, Objective Design and Development Standards, the design review process, the Vineyard Avenue Corridor Specific Plan, and Measures PP and QQ would ensure that future development projects consistent with the Housing Element Update are cohesive, appropriately designed in terms of potential aesthetic impacts, and reflect the character of the City.

On a programmatic level, development consistent with the Housing Element Update would have a less than significant impact related to scenic quality regulations.

### *Visual Character*

The Housing Element Update FEIR indicated that the majority of the potential sites for rezoning are already developed or are partially developed with urbanized uses, or are relatively small sites completely surrounded by urbanized uses. Development of such sites would not conflict with or diminish the existing scenic quality. However, Sites 1 (Lester), 3 (PUSD-Donlon), 14 (St. Elizabeth Seton), 21a and b (Kiewit), 22 (Merritt), 26 (St. Augustine), 27 (PUSD-Vineyard), 29 (Oracle), and portions of Site 24 (Sonoma Drive) are vacant. Introduction of new residential uses would have the potential to alter the visual character of these potential sites for housing.

The Housing Element Update FEIR concluded that compliance with General Plan policies and programs and adherence to development and design standards in the Municipal Code and Vineyard Avenue Corridor Specific Plan and Hacienda Design Guidelines would ensure that future development projects consistent with the Housing Element Update are cohesive, appropriately designed in terms of potential aesthetic impacts, and reflect the character of the City. At the programmatic level, aesthetic impacts to the quality of public views in non-urbanized areas would be less than significant.

### **Proposed Project Analysis and Conclusion**

As noted above, the project site is currently undeveloped. However, existing single-family residential development is located to the east, west, and south of the site. Therefore, the proposed project would be located in an urbanized portion of the City, and development of single-family residences on-site would be consistent with the visual character of the surrounding area. In addition, the proposed project would be consistent with the City's anticipated on-site development and would comply with all applicable development standards required by the City and the Vineyard Avenue Corridor Specific Plan, including standards related to building height, lot area, setbacks, and building design. Furthermore, as shown in Exhibit 6, the proposed project would incorporate landscaping and new trees throughout the project site, thereby complying with City standards related to such. The proposed project would also be subject to a Design Review by the City, which would allow the review of all proposed development, signs, buildings, structures, and other facilities. Therefore, the proposed project would not result in any new or peculiar impacts related to conflicting with applicable zoning and other regulations governing scenic quality.

Based on the above, impacts related to conflicting with applicable zoning and other regulations governing scenic quality were adequately addressed in the Housing Element Update FEIR, and the project would not result in more severe impacts beyond what was identified therein.

**d) Light and Glare**

*Would the project: Create a new source of substantial light or glare which would adversely affect day or nighttime views in the area?*

**Summary of Housing Element Update FEIR**

The Housing Element Update FEIR indicated that development consistent with the Housing Element Update could introduce artificial light from new development and outdoor parking areas, which could result in potentially significant impacts with respect to light and glare.

The Housing Element Update FEIR concluded that all future development would be required to comply with the applicable light and glare standards in the Municipal Code and California Energy Code. Compliance with the applicable lighting and energy requirements elucidated in the Municipal Code and California Energy Code would ensure that light and glare associated with future development would not spillover onto adjacent land uses and impacts would be less than significant.

**Proposed Project Analysis and Conclusion**

The project site is undeveloped; therefore, development of the proposed project would introduce sources of light and glare to a site where such sources do not currently exist. However, because the proposed residential development would occur within the HEO area, the proposed project would be consistent with the City's anticipated on-site development and, thus, would be consistent with the conclusions of the Housing Element Update FEIR. In addition, the proposed project would be subject to Sections 18.88.040(J) and 18.96.020 of the City's Municipal Code, which would serve to limit glare and spillover light from signs, as well as limit interior and exterior illumination. Compliance with the aforementioned provisions would ensure that the light and glare created by the proposed project would be consistent with the levels of light and glare currently emitted in the surrounding environment. Furthermore, the proposed project would undergo the City's Design Review process, which would ensure that significant impacts related to new sources of light and glare would be avoided.

Based on the above, impacts related to creating a new source of substantial light or glare which would adversely affect day or nighttime views in the area

were adequately addressed in the Housing Element Update FEIR and the proposed project would not result in any peculiar effects. Thus, the criteria for requiring further CEQA review are not met.

### **Conclusion**

With regards to Aesthetics, the consistency checklist demonstrates that:

1. No peculiar impacts related to the proposed project or its site have been identified.
2. There are no potentially significant off-site and/or cumulative impacts which were not discussed by the Housing Element Update FEIR.
3. No substantial new information has been identified which results in an impact which is more severe than anticipated by the Housing Element Update FEIR.
4. No mitigation measures are necessary because the proposed project's specific impacts would be less than significant.

### **Mitigation Measures**

None.

Consistency Checklist

Environmental Issue Area	Housing Element Update FEIR Determination	Effect Peculiar to Project or Site?	New Significant Effect?	New Significant Off-site, Cumulative Impact?	New Information, More Severe Adverse Impact?
<p><b>II. Agricultural and Forest Resources</b> <i>Would the project:</i></p>

<p>b) Conflict with existing zoning for agricultural use, or a Williamson Act Contract?</p>	<p>Less than significant impact</p>	<p>No</p>	<p>No</p>	<p>No</p>	<p>No</p>
<p>c) Conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resources Code Section 12220(g)), timberland (as defined by Public Resources Code Section 4526), or timberland zoned Timberland Production (as defined by Government Code Section 51104(g))?</p>	<p>No impact</p>	<p>No</p>	<p>No</p>	<p>No</p>	<p>No</p>
<p>d) Result in the loss of forest land or conversion of forest land to non-forest use?</p>	<p>No impact</p>	<p>No</p>	<p>No</p>	<p>No</p>	<p>No</p>

Environmental Issue Area	Housing Element Update FEIR Determination	Effect Peculiar to Project or Site?	New Significant Effect?	New Significant Off-site, Cumulative Impact?	New Information, More Severe Adverse Impact?
e) Involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland, to nonagricultural use or conversion of forest land to non-forest use?	Less than significant impact	No	No	No	No

**a, e) Conversion of Important Farmland to Nonagricultural Use and Other Changes to Convert Farmland to Nonagricultural Use or Forest Land to Non-Forest Use**

- Would the project:
- a) *Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to nonagricultural use? or*
  - e) *Involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland, to nonagricultural use or conversion of forest land to non-forest use?*

**Summary of Housing Element Update FEIR**

The Housing Element Update FEIR indicated that Site 22 (Merritt), which is the only potential site for rezoning with any mapped Important Farmland, is not currently utilized for agriculture nor has it been recently irrigated or used for crops. Furthermore, as indicated by Site 22’s residential land use designation, the City has planned the site for low density residential uses since the 1986 General Plan. The Housing Element Update would redesignate the site PUD-LDR, which is consistent with the low density residential designation. Therefore, any potential loss of Unique Farmland would likely occur with or without implementation of the Housing Element Update.

Site 27 (PUSD-Vineyard) is within the Vineyard Avenue Corridor Specific Plan. Therefore, in compliance with Section V(E) of the Specific Plan, at the time of

subdivision map recordation for urban development projects within Site 27 (PUSD-Vineyard), a payment of a one-to-one ratio (agricultural mitigation fee) between the cost per acre for agricultural easements and the net acreage of potentially cultivable soils less than 25 percent in slope lost to development would be paid to the South Livermore Valley Agricultural Land Trust.

The Housing Element FEIR concluded that none of the other potential sites for rezoning are mapped as Important Farmland, which precludes an impact related to conversion of Prime Farmland, Unique Farmland, or Farmland of Statewide Importance to nonagricultural uses. Therefore, the impacts are less than significant.

In addition, the Housing Element Update FEIR indicated most of the potential sites for rezoning are urban infill sites that are surrounded by development; several of them are currently developed. The land to the east of Sites 1 (Lester) and 22 (Merritt) is urbanized and/or designated for urbanized uses. With respect to Site 1 (Lester), the land designated for agriculture is outside of the Urban Growth Boundary, which would preclude development on that land. With respect to Site 22 (Merritt), the land to the west of that site is designated as rural residential, and the development of housing on Site 22 (Merritt) would not result in conversion of the surrounding land to nonagricultural uses.

There is no forest land within the City's Sphere of Influence (SOI). This condition precludes the possibility of the Housing Element Update converting forest land to non-forest uses.

Therefore, the Housing Element Update FEIR concluded impacts related to the conversion of Farmland to nonagricultural use or forest land to non-forest use would be less than significant.

### **Proposed Project Analysis and Conclusion**

The project site is currently undeveloped and is located within the vicinity of existing development. According to the Department of Conservation's (DOC) California Important Farmland Finder, the project site is currently designated as "Grazing Land."<sup>3</sup> Grazing Land is defined by the DOC as land on which the existing vegetation is suited to the grazing of livestock. The Grazing Land category is used only in the State of California and was developed in cooperation with the California Cattlemen's Association,

---

<sup>3</sup> California Department of Conservation. *California Important Farmland Finder*. Available at: <https://maps.conservation.ca.gov/dlrp/ciff/>. Accessed January 2025.

University of California Cooperative Extension, and other groups interested in the extent of grazing activities. The project site does not contain, and is not located adjacent to, Prime Farmland, Unique Farmland, or Farmland of Statewide Importance. Nonetheless, as discussed above, because the proposed project is within the Vineyard Avenue Specific Plan, the project may be subject to payment of an agricultural mitigation fee at a one-to-one ratio to the South Livermore Valley Agricultural Land Trust to compensate for the loss of any potentially cultivable soils less than 25 percent in slope located on-site, pursuant to Section V(E) of the Specific Plan. Payment of such fees would contribute to the preservation of agricultural land, thereby ensuring sufficient agricultural land remains in the area.

Based on the above, impacts related to the conversion of important farmland to non-agricultural use or forest land to non-forest use were adequately addressed in the Housing Element Update FEIR and the proposed project would not result in any peculiar effects. Thus, the criteria for requiring further CEQA review are not met.

**b) Conflict with Existing Zoning for Agricultural Use or Williamson Act Contracts**

Would the project: *Conflict with existing zoning for agricultural use, or a Williamson Act Contract?*

**Summary of Housing Element Update FEIR**

The Housing Element Update FEIR indicated that none of the potential sites for rezoning have existing zoning designations that would allow for agricultural uses, aside from Sites 1 (Lester), 14 (St. Elizabeth Seton), and 26 (St. Augustine).

In regard to Site 1 (Lester), its proposed pre-zoning designation is Planned Unit Development: Low Density Residential, Agriculture, Open Space. This pre-zoning designation would allow for agricultural uses on-site, consistent with the existing zoning.

The Housing Element Update would redesignate Site 14 (St. Elizabeth Seton) as High Density Residential (HDR) with a Planned Unit Development: High Density Residential (PUD-HDR) zoning and would redesignate Site 26 (St. Augustine) as Medium Density Residential (MDR) with a Planned Unit Development: Medium Density Residential (PUD-MDR) zoning. These redesignations and rezonings would rectify the current inconsistencies between the General Plan land use designations as Medium Density Residential for Site 14 and Public and Institutional for Site 26 with the zonings

of agricultural uses for both Sites 14 (St. Elizabeth Seton) and 26 (St. Augustine).

The Housing Element Update FEIR concluded that, because none of the other potential sites for rezoning are zoned for agricultural uses, the Housing Element Update would not conflict with existing zoning for agricultural uses on those sites. Therefore, the impacts are less than significant with respect to conflicts with existing zoning for agricultural use.

The Housing Element Update FEIR concluded that none of the potential sites for rezoning are encumbered by a Williamson Act Contract, which precludes an impact related to conflict with an existing Williamson Act Contract. Therefore, there is no impact.

#### **Proposed Project Analysis and Conclusion**

The project site is zoned PUD – Elementary School and is consistent with the type of development anticipated for the site by the City under the approved HEO. As the site is zoned for development of an elementary school and is currently anticipated for residential development, the project site is not zoned for or anticipated for agricultural uses. In addition, the project site is not under a Williamson Act Contract.<sup>4</sup> As such, the proposed project would not result in any peculiar effects, and the criteria for requiring further CEQA review are not met.

#### **c, d) Conflict with Existing Forest Land Zoning and Conversion of Forest Land to Non-Forest Use**

Would the project: c) Conflict with existing zoning for forest land or timberland zoned Timberland Production (as defined by Government Code Section 51104(g))<sup>4</sup>? or

d) Result in the loss of forest land or conversion of forest land to non-forest use?

#### **Summary of Housing Element Update FEIR**

The Housing Element Update EIR indicated that none of the potential sites for rezoning contain any forest land or timberland, as defined by Public Resource Code Section 4526, nor do they contain any timberland zoned Timberland Production, as defined by Government Code Section 51104(g), and concluded that this precludes the possibility of the Housing Element

---

<sup>4</sup> California Department of Conservation. *California Williamson Act Enrollment Finder*. Available at: <https://maps.conservation.ca.gov/dlrp/WilliamsonAct/App/index.html>. Accessed December 2024.

Update to conflict with forest zoning of forest land or timberland. No impact would occur.

The Housing Element Update FEIR further indicated that, aside from Site 1 (Lester), the potential sites for rezoning are adjacent to urbanized land uses and do not contain any forest land. Site 1 (Lester) is surrounded to the northwest, west, and southwest by open space. However, that land is outside of the Urban Growth Boundary, and development would not be allowed in those areas even with the approval of the Housing Element Update. The Housing Element Update FEIR concluded that this condition precludes the possibility of the development consistent with the Housing Element Update converting forest land to non-forest use and concluded no impacts would occur.

#### **Proposed Project Analysis and Conclusion**

Woodlands are not located on the project site and the project site is not considered forest land or timberland. The proposed project is zoned PUD – Elementary School and is anticipated for residential development by the City; therefore, the site is not zoned Timberland Production. As such, the proposed project would not result in any peculiar effects, and the criteria for requiring further CEQA review are not met.

#### **Conclusion**

With regards to Agriculture and Forestry Resources, the consistency checklist demonstrates that:

1. No peculiar impacts related to the proposed project or its site have been identified.
2. There are no potentially significant off-site and/or cumulative impacts which were not discussed by the Housing Element Update FEIR.
3. No substantial new information has been identified which results in an impact which is more severe than anticipated by the Housing Element Update FEIR.
4. No mitigation measures would be required because the proposed project's specific impacts would be less than significant.

#### **Mitigation Measures**

None.

Environmental Issue Area	Housing Element Update FEIR Determination	Effect Peculiar to Project or Site?	New Significant Effect?	New Significant Off-site, Cumulative Impact?	New Information, More Severe Adverse Impact?
<p><b>III. Air Quality</b> Where available, the significance criteria established by the applicable air quality management district or air pollution control district may be relied upon to make the following determinations. Would the project:</p>					
a) Conflict with or obstruct implementation of the applicable air quality plan?	Less than significant impact with mitigation incorporated	No	No	No	No
b) Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is nonattainment under an applicable federal or State ambient air quality standard?	Less than significant impact with mitigation incorporated	No	No	No	No
c) Expose sensitive receptors to substantial pollutant concentrations?	Less than significant impact with mitigation incorporated	No	No	No	No
d) Result in other emissions (such as those leading to odors ) adversely affecting a substantial number of people?	Less than significant impact	No	No	No	No

The project-specific analysis presented herein is based primarily on an Air Quality and Greenhouse Gas Assessment (AQ/GHG Assessment) prepared for the proposed project by Illingworth and Rodkin, Inc. (I&R) (see Appendix A).<sup>5</sup>

<sup>5</sup> Illingworth and Rodkin, Inc. *The Vineyards Air Quality and Greenhouse Gas Assessment*, Pleasanton, California. September 25, 2024. Revised November 15, 2024.

**a, b) Consistency with Air Quality Management Plan and Cumulative Criteria Pollutant Emissions Impacts**

- Would the project:
- a) *Conflict with or obstruct implementation of the applicable air quality plan? or*
  - b) *Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is nonattainment under an applicable federal or State ambient air quality standard?*

**Summary of Housing Element Update FEIR**

*Support Primary Goals of the Air Quality Plan*

The Housing Element Update FEIR indicated that the current Air Quality Plan (AQP) applicable to the Housing Element Update is the 2017 Clean Air Plan. According to the Bay Area Air Quality Management District (BAAQMD) guidance, a proposed land use plan is consistent with the AQP if it would (1) support the primary goals of the AQP, (2) include applicable control measures from the AQP, (3) not disrupt or hinder implementation of any AQP control measures, and (4) the plan's projected VMT increase must be less than or equal to its projected population growth.

With regards to the primary goals of the AQP, it was determined that because of the BAAQMD's recommended significance thresholds and that the San Francisco Bay Area Air Basin (SFBAAB) is currently in nonattainment for particulate matter (PM) standards, individual development projects facilitated by the Housing Element Update would be considered to have potentially significant site-specific or project-specific impacts related to the generation of fugitive dust during construction activities if they do not implement Best Management Practice (BMP) targeting dust control and sediment migration. Therefore, Mitigation Measure (MM) AIR-1a, which would require individual development projects to employ dust control measures recommended by the BAAQMD during construction, which would ensure that all future development projects facilitated by the Housing Element Update would not result in potentially significant impacts related to construction fugitive dust and contribute to the region's current nonattainment status for PM. Furthermore, for project sites that would be located within siting distances recommended by the BAAQMD and ARB, currently published in the ARB Air Quality and Land Use Handbook: A Community Health Perspective, or the latest available guidance as determined by the City as the lead agency, MM AIR-1b would be required. For these project sites, MM AIR-1b requires that a site-specific Health Risk

Assessment (HRA) be conducted and mitigation be developed to reduce any identified significant health risk to sensitive receptors to less than significant levels.

*Applicable Control Measures from the AQP*

With regards to applicable control measures, it was determined, as outlined in Table 3.2-7 of Page 3.2-41 through 3.2-49 of the Housing Element Update Draft EIR, that the Housing Element Update includes the applicable control measures from the AQP. The General Plan, which the Housing Element Update constitutes an update to, and the Municipal Code include policies and requirements that incorporate and implement the control measures included in the 2017 Clean Air Plan. As such, the Housing Element Update would be consistent with the 2017 Clean Air Plan.

*Hinder Implementation of AQP Control Measures*

With regards to disruption or hinderance of the implementation of any air quality plan control measures, the Housing Element Update FEIR indicated that the Housing Element Update incorporates policies that are consistent with the control measures included in the 2017 Clean Air Plan. The Housing Element Update does not include any components that would disrupt or hinder implementation of any control measures nor would the Housing Element Update inhibit the General Plan's policies that support the implementation of AQP control measures.

*Vehicle Miles Traveled Per Capita*

With regards to increase in VMT, it was determined that implementation of the Housing Element Update would result in a population growth which outpaces forecasted VMT growth and the Housing Element Update would not be considered to exceed BAAQMD-approved significance thresholds or conflict with or obstruct implementation of the AQP.

In conclusion, overall development facilitated by the Housing Element Update would be consistent with the 2017 Clean Air Plan with the implementation of MM AIR-1a and -1b, and impacts would be less than significant after mitigation.

*Cumulative Criteria Pollutant Emissions Impacts*

The Housing Element Update FEIR indicated that future development facilitated by the Housing Element Update would result in short-term construction-related criteria pollutant emissions that have the potential to

have an adverse effect on air quality. As the SFBAAB is currently designated as a nonattainment area for PM, and considering that the BAAQMD's recommended significance threshold for construction fugitive dust is binary—meaning if a project includes dust control BMPs then construction fugitive dust emissions would be less than significant, but if a project does not explicitly include dust control BMPs then construction fugitive dust emissions would be potentially significant—MM AIR-1a would be required to ensure that individual development projects facilitated by the Housing Element Update would result in less than significant construction fugitive dust impacts. As previously discussed in Impact III(a), by complying with the AQP and implementation of MM AIR-1a and -1b, operational related criteria pollutant emissions would not have an adverse effect on air quality.

Therefore, the Housing Element Update FEIR concluded that, with the implementation of MM AIR-1a and 1b, a cumulatively considerable net increase of any criteria pollutant for which the project region is in nonattainment under an applicable federal or State ambient air quality standard would not occur and impacts would be less than significant.

#### **Proposed Project Analysis and Conclusion**

According to the AQ/GHG Assessment, the Bay Area is considered a non-attainment area for ground-level ozone (O<sub>3</sub>) and particulate matter 2.5 microns in diameter (PM<sub>2.5</sub>) under both the national ambient air quality standard (NAAQS) and the California ambient air quality standard (CAAQS). The area is also considered non-attainment for PM<sub>10</sub> under the CAAQS, but not the NAAQS. The area has attained both State and federal ambient air quality standards (AAQS) for carbon monoxide (CO). As part of an effort to attain and maintain AAQS for ozone (O<sub>3</sub>), PM<sub>2.5</sub>, and PM<sub>10</sub>, BAAQMD has established thresholds of significance for these air pollutants and their precursors. The O<sub>3</sub> precursor pollutant thresholds are for reactive organic gases (ROG) and nitrous oxides (NO<sub>x</sub>), while PM<sub>10</sub> and PM<sub>2.5</sub> have specific thresholds. The thresholds apply to both construction period emissions and operational period emissions.

All development projects within the jurisdiction of the BAAQMD are required to implement BAAQMD's Basic Construction Mitigation Measures (BCMMs). The City's standard procedure is to include compliance with the BAAQMD BCMMs through MM AIR-1a or as Conditions of Approval, including the following:

1. All exposed surfaces (e.g., parking areas, staging areas, soil piles, graded areas, and unpaved access roads) shall be watered two times per day.
2. All haul trucks transporting soil, sand, or other loose material off-site shall be covered.
3. All visible mud or dirt track-out onto adjacent public roads shall be removed using wet power vacuum street sweepers at least once per day. The use of dry power sweeping is prohibited.
4. All vehicle speeds on unpaved roads shall be limited to 15 miles per hour (mph).
5. All roadways, driveways, and sidewalks to be paved shall be completed as soon as possible. Building pads shall be laid as soon as possible after grading unless seeding or soil binders are used.
6. All excavation, grading, and/or demolition activities shall be suspended when average wind speeds exceed 20 mph.
7. All trucks and equipment, including their tires, shall be washed off prior to leaving the site.
8. Unpaved roads providing access to sites located 100 feet or further from a paved road shall be treated with a six- to 12-inch layer of compacted layer of wood chips, mulch, or gravel.
9. Publicly visible signs shall be posted with the telephone number and name of the person to contact at the lead agency regarding dust complaints. This person shall respond and take corrective action within 48 hours. The Air District's General Air Pollution Complaints number shall also be visible to ensure compliance with applicable regulations.

The proposed project's required implementation of the BAAQMD's BCMMS listed above for the project's construction activities would help to minimize construction-related fugitive dust emissions to a less-than-significant level. In addition, the proposed project would be required to comply with the provisions of Chapter 9.21, Construction and Demolition Debris, of the City's Municipal Code, which would be ensured through preparation and approval of a waste management plan (WMP). The WMP would include project information, the hauling and disposal method, and the estimated quantities of materials to be salvaged and/or disposed.

In addition, the AQ/GHG Assessment used the California Emissions Estimator Model (CalEEMod) Version 2022 to estimate emissions from on-site construction activity, construction vehicle trips, and evaporative emissions, as well as operational emissions. The project land use types and size were input to CalEEMod, as well as operational year, traffic information, and other

factors. As shown in Table 3 and Table 4 of the AQ/GHG Assessment, reproduced as Table 1 and Table 2 below, the proposed project would result in maximum unmitigated criteria air pollutant emissions below the applicable thresholds of significance during both construction and operation. As such, the proposed project would not result in a significant air quality impact during construction or operation, and impacts related to such were adequately addressed in the City's Housing Element Update FEIR.

**Table 1  
Construction Period Emissions**

Year	ROG	NO <sub>x</sub>	PM <sub>10</sub> Exhaust	PM <sub>2.5</sub> Exhaust
<b>Construction Emissions Total (Tons)</b>				
2027	0.13	1.18	0.05	0.04
2028	0.95	0.31	0.01	0.01
<b>Average Daily Construction Emissions (pounds/day)</b>				
2027 (191 construction workdays)	1.41	12.32	0.48	0.44
2028 (67 construction workdays)	28.25	9.33	0.31	0.28
BAAQMD Thresholds (pounds/day)	54	54	82	54
<b>Exceeds threshold?</b>	<b>No</b>	<b>No</b>	<b>No</b>	<b>No</b>
Source: I&R, November 15, 2024.				

**Table 2  
Operational Period Emissions**

Scenario	ROG	NO <sub>x</sub>	PM <sub>10</sub>	PM <sub>2.5</sub>
2029 Project Operational Emissions (tons/year)	0.74	0.12	0.29	0.08
BAAQMD Thresholds (tons/year)	10	10	15	10
<b>Exceeds threshold?</b>	<b>No</b>	<b>No</b>	<b>No</b>	<b>No</b>
2029 Project Operational Emissions (lbs/day)	4.04	0.66	1.61	0.42

<b>Exceeds threshold?</b>	<b>No</b>	<b>No</b>	<b>No</b>	<b>No</b>
Source: I&R, November 15, 2024.				

Based on the above, the proposed project would not conflict with or obstruct implementation of the applicable air quality plans during project construction or operation, and impacts related to such were adequately addressed in the City's Housing Element Update FEIR.

**c) Sensitive Receptors Exposure to Toxic Air Contaminant Concentrations**

Would the project: *Expose sensitive receptors to substantial pollutant concentrations?*

**Summary of Housing Element Update FEIR**

The Housing Element Update FEIR indicated that development consistent with the Housing Element Update could expose sensitive receptors to substantial pollutant concentrations.

Within the SFBAAB, localized risks are primarily associated with exposure to toxic air contaminants (TACs) and PM<sub>2.5</sub> emissions. Although it is not anticipated that development consistent with the Housing Element Update would include any new, large stationary sources of emissions, it would result in new sensitive receptors (primarily residential receptors) near existing sources of emissions. The BAAQMD Guidelines recommend a Community Risk Reduction Plan (CRRP) that would bring TAC and PM<sub>2.5</sub> concentrations in the SFBAAB down to acceptable levels as identified by the local jurisdiction and approved by BAAQMD.

#### *Plan Land Use Diagram Special Overlay Zones*

The Housing Element Update FEIR concluded that, consistent with BAAQMD's CEQA Air Quality Guidelines, the Housing Element Update would not result in a significant community risk and hazard impact if the land use diagram identifies special overlay zones around existing and planned sources of TACs and PM<sub>2.5</sub>, including special overlay zones of at least 500 feet on each side of all freeways and high-volume roadways, and the plan identifies goals, policies, and objectives to minimize potentially adverse impacts. Compliance with goals, policies, and programs included as part of the General Plan would ensure these zones and overlays are implemented. For potential sites for rezoning that would be located within siting distances recommended by the BAAQMD and ARB, currently published in the ARB Air Quality and Land Use Handbook: A Community Health Perspective, or the latest available guidance as determined by the City as the lead agency, MM AIR-1b is required, which would require the preparation a site-specific HRA and to mitigate potential risk to potential new sensitive receptors to less than significant levels. Furthermore, future development projects consistent with the Housing Element Update would need to demonstrate compliance with the strategies included in the CAP 2.0, including measures that have air quality benefits, such as sustainable design, energy conservation, and strategies to reduce VMT.

#### *Goals, Policies, and Objectives for Reducing Impacts*

A proposed plan must identify goals, policies, and objectives to minimize potential impacts and create overlay zones around sources of TACs, PM<sub>2.5</sub>, and hazards to be considered to result in less than significant impacts related to exposing sensitive receptors to substantial pollutant concentrations. The General Plan (which would include the Housing Element Update, once adopted) contains several policies and programs that aim to reduce the potential growth of vehicle use through encouraging the use of alternative

modes of transportation, monitoring and improving existing sources of TACs throughout the City and reducing overall health impacts related to air quality in general.

Furthermore, for project sites that would be located within siting distances recommended by the BAAQMD and ARB, currently published in the ARB Air Quality and Land Use Handbook: A Community Health Perspective, or the latest available guidance as determined by the City of Pleasanton as the lead agency, MM AIR-1b requires the preparation of a site-specific HRA and to mitigate potential risk to potential new sensitive receptors to less than significant levels. Adherence to the policies and programs of the General Plan would ensure compliance with existing BAAQMD policies to ensure the reduction of sensitive receptors exposure to toxic air contaminant. The Housing Element Update FEIR concluded that with the implementation of MM AIR-1b, sensitive receptors would not be exposed to substantial pollutant concentrations, and impacts would be less than significant.

#### **Proposed Project Analysis and Conclusion**

According to the AQ/GHG Assessment, the primary health risk impact issues associated with construction projects are cancer risks associated with diesel particulate matter (DPM), which is a known TAC, and exposure to high ambient concentrations of dust (i.e., PM<sub>2.5</sub>). Major sources of TACs include, but are not limited to, freeways, high traffic roads, distribution centers, and rail yards. Because DPM is identified as a TAC, high volume freeways, stationary diesel engines, and facilities attracting heavy and constant diesel vehicle traffic are identified as having the highest associated health risks from DPM. Health risks associated with TACs are a function of both the concentration of emissions and the duration of exposure, where the higher the concentration and/or the longer the period of time that a sensitive receptor is exposed to pollutant concentrations would correlate to a higher health risk. The proposed project does not include any operations that would be considered a substantial source of TACs, such as the aforementioned distribution centers or facilities attracting heavy and constant diesel vehicle traffic. Accordingly, operations of the proposed project would not expose the nearby sensitive receptors to excess concentrations of TACs. However, short-term, construction-related activities could result in the generation of TACs from on-road haul trucks and off-road equipment exhaust emissions. Although DPM emissions from on-road haul trucks would be widely dispersed throughout the project site and surrounding vicinity as haul trucks move goods and material to and from the site, exhaust from off-road equipment would primarily occur within the project site.

Nonetheless, due to the proximity of the proposed construction area to the nearest sensitive receptors to the east, the AQ/GHG Assessment included a HRA evaluating the potential health effects to nearby sensitive receptors from construction emissions of DPM and PM<sub>2.5</sub>. The HRA included dispersion modeling to predict the off-site concentrations resulting from project construction and estimated lifetime cancer risks and non-cancer health effects. The dispersion modeling was conducted with the American Meteorological Society/Environmental Protection Agency (AMS/EPA) Regulatory Model (AERMOD), the BAAQMD-recommended model for use in health risk assessment modeling.

According to BAAQMD, an impact associated with TACs would occur if the aggregate total of all past, present, and foreseeable future sources within a 1,000-foot radius from the fence line of a source, or from the location of a receptor, plus the contribution from the project, would exceed the following:

- An increase in cancer risk levels (from all local sources) of more than 100 persons in one million;
- An annual average PM<sub>2.5</sub> concentration (from all local sources) of 0.3 micrograms per cubic meter (µg/m<sup>3</sup>) or greater.
- An increase in non-cancer hazard index threshold of 1.0.

According to the AQ/GHG Assessment and as shown in Table 6 therein (recreated as Table 3 below), project-generated DPM emissions would result in an increased cancer risk of 8.07 chances in one million at the maximally exposed individual (MEI), increased annual PM<sub>2.5</sub> generation of 0.09 µg/m<sup>3</sup> for PM<sub>2.5</sub>, and a non-cancer chronic risk hazard index of 0.01. All three of the foregoing results are below the applicable thresholds of significance. Similarly, the cumulative cancer risk, PM concentration, and hazard index would not exceed BAAQMD project-level thresholds of significance. Therefore, development of the proposed project would not result in the exposure of nearby sensitive receptors to TAC-related health risks.

Based on the above, the proposed project would not result in any peculiar effects, and further CEQA review would not be required.

**Table 3  
 Construction Risk Impacts at the Off-Site MEI**

Scenario	Cancer Risk (per million)	Annual PM <sub>2.5</sub> (µg/m <sup>3</sup> )	Hazard Index
<b>Project Impacts</b>			
Project Construction	8.07 (infant)	0.09	0.01

<b>Exceeds threshold?</b>	<b>No</b>	<b>No</b>	<b>No</b>
Source: I&R, November 15, 2024.			

**d) Objectionable Odors Exposure**

Would the project: *Result in other emissions (such as those leading to odors or) adversely affecting a substantial number of people?*

**Summary of Housing Element Update FEIR**

The Housing Element Update FEIR indicated that the Housing Element Update would facilitate future development of sensitive receptors within the identified screening distances of existing odor sources such as the Dublin-San Ramon Wastewater Treatment Plan, the Pleasanton Garbage Service Transfer Station, various coffee roasters, and Vulcan Materials. Vulcan Materials is located approximately 1.5 miles east of Site 21a and b (Kiewit) and 20 (Boulder Court) and 1 mile north of Site 27 (PUSD-Vineyard).

The Housing Element Update FEIR concluded compliance with applicable regulations in the General Plan and applicable BAAQMD rules and regulations would minimize odor emissions from adversely affecting a substantial number of people within the City and impacts would be less than significant.

**Proposed Project Analysis and Conclusion**

Emissions, such as those leading to odors, have the potential to adversely affect sensitive receptors within the project area. Pollutants of principal concern include emissions leading to odors, emissions of dust, or emissions considered to constitute air pollutants. Air pollutants have been discussed in sections 'a' through 'c' above. Therefore, the following discussion focuses on emissions of odors and dust.

Pursuant to the BAAQMD CEQA Guidelines, odors are generally regarded as an annoyance rather than a health hazard. Manifestations of a person's reaction to odors can range from psychological (e.g., irritation, anger, or anxiety) to physiological (e.g., circulatory and respiratory effects, nausea, vomiting, and headache). The presence of an odor impact is dependent on several variables including: the nature of the odor source; the frequency of odor generation; the intensity of odor; the distance of odor source to sensitive receptors; wind direction; and sensitivity of the receptor.

Due to the subjective nature of odor impacts, the number of variables that can influence the potential for an odor impact, and the variety of odor sources, quantification of significant odor impacts is relatively difficult. Typical odor-generating land uses include, but are not limited to, wastewater treatment plants (WWTPs), landfills, and composting facilities. The proposed project would not introduce any such land uses.

Construction activities often include diesel-fueled equipment and heavy-duty diesel trucks, which can create odors associated with diesel fumes. Such odors could be found to be objectionable. However, construction activities would be temporary, and operation of construction equipment would be regulated and intermittent. Project construction would also be required to comply with all applicable BAAQMD rules and regulations, particularly associated with permitting of air pollutant sources. The aforementioned regulations would help to minimize air pollutant emissions, as well as any associated odors. Accordingly, substantial objectionable odors would not occur during construction activities or affect a substantial number of people.

In addition, the BAAQMD rules and regulations would act to reduce construction-related dust, which would ensure that construction of the proposed project does not result in substantial emissions of dust. Following project construction, the project site would not include any exposed topsoil. Thus, project operations would not include any substantial sources of dust.

As discussed in the AQ/GHG Assessment, the existing quarry is located opposite Vineyard Avenue and extends well to the north. The quarry contains multiple stationary sources of dust and particulate matter, such as the CEMEX Pleasanton Concrete Plant and Granite Construction. However, the project site is located at least 1,000 feet from the edge of the quarry. According to the AQ/GHG Assessment, the major sources of emissions (such as crushing, pulverizing, and transporting equipment) are located at even further distances in the northern portions of the quarry, thereby increasing the distance between the source of emissions and the proposed sensitive

receptors. Finally, according to the AQ/GHG Assessment, the wind through the area predominantly towards the east-southeast, away from the site and sensitive receptors. As a result, the quarry operations are not anticipated to result in any substantial odors or dust emissions at the project site.

For the aforementioned reasons, construction and operation of the proposed project would not result in emissions (such as those leading to odors) adversely affecting a substantial number of people. Furthermore, given that the proposed project is consistent with the type of residential development anticipated for the site, emissions associated with construction and operation of the proposed project have been anticipated and analyzed in the Housing Element Update FEIR. Therefore, the proposed project would not result in any peculiar effects, and further CEQA review would not be required for this topic.

## Conclusion

With regards to Air Quality, the consistency checklist demonstrates that:

1. No peculiar impacts related to the proposed project or its site have been identified.
2. There are no potentially significant off-site and/or cumulative impacts which were not discussed by the Housing Element Update FEIR.
3. No substantial new information has been identified which results in an impact which is more severe than anticipated by the Housing Element Update FEIR.
4. MM AIR-1a and MM AIR-1b from the Housing Element Update FEIR would be required and would reduce potential impacts to below a level of significance consistent with the analysis in the Housing Element Update FEIR.

## Mitigation Measures

### Housing Element Update FEIR Mitigation Measures

**MM AIR-1a** Prior to the issuance of a grading or building permit, whichever is sooner, the project applicant for a potential site for rezoning shall submit an air quality construction plan detailing the proposed air quality construction measures related to the project such as construction phasing, construction equipment, and dust control measures, and such plan shall be approved by the Director of

Community Development or designee. Air quality construction measures shall include (1) Basic Construction Mitigation Measures, as approved by the Bay Area Air Quality Management District (BAAQMD) in 2017, or the then currently adopted guidelines and, (2) where construction-related emissions would exceed the applicable thresholds as demonstrated by a qualified consultant documented pursuant to methodologies considered acceptable at that time, Additional Construction Mitigation Measures, as recommended by the BAAQMD, shall be implemented to reduce emissions to acceptable levels. The air quality construction plan shall be included on all grading, utility, building, landscaping, and improvement plans during all phases of construction and for access roads, parking areas, and staging areas at construction sites.

**MM AIR-1b** The following measures pertain to project sites where residences would be located within distances where the Bay Area Air Quality Management District (BAAQMD) or the California Air Resources Board (ARB) recommends not siting residential uses due to exposures to toxic air contaminants (TACs). For example, the current 2005 ARB Land Use Book recommends that agencies avoid siting new sensitive land uses within 500 feet of a freeway, urban roads with 100,000 vehicles/day, or rural roads with 50,000 vehicles/day

**Indoor Air Quality:** In accordance with the recommendations of the BAAQMD, appropriate measures (refer to Section 5 of the BAAQMD CEQA Guidelines) shall be incorporated into building design in order to reduce the potential health risk due to exposure of sensitive receptors to TACs, including, but not limited to:

- (a) locate sensitive receptors as far as possible within each project site from any freeways, major roadways or other non-permitted TAC sources (e.g., loading docks, parking lots);
- (b) incorporate tiered plantings of trees (such as redwood, deodar cedar, live oak, and/or oleander) to the maximum extent feasible between the sources of pollution and sensitive receptors;

- (c) install, operate and maintain in good working order a central heating ventilation and air conditioning (HVAC) system or other air take system in the building, or in each residential unit, that meets or exceeds an efficiency standard of minimum efficiency reporting values (MERV) 13, including the following features: installation of high efficiency filter and /or carbon filter to filter particulates and other chemical matter from the building (either high-efficiency particulate air [HEPA] filters or ASHRAE 85 percent supply filters);
- (d) retain a qualified HVAC consultant or Home Energy Rating System (HERS) rater during the design phase of the project to locate air ventilation and the HVAC system intakes based on exposure modeling from pollutant sources;
- (e) install indoor air quality monitoring in buildings; and
- (f) applicants shall maintain ensure that HVAC systems and air ventilation systems are maintained, repaired, or replaced on an ongoing and as-needed basis. If the project includes for-sale units, then the applicant shall prepare two operation and maintenance manuals for the HVAC systems and the filters: one manual shall be included in the recorded Conditions Covenants and Restrictions (CC&Rs) that shall be recorded, and the manual shall be distributed to building maintenance staff; the other manual shall be written for homeowners' with operating instructions and maintenance and replacement schedule for the HVAC system and filters, and that manual shall be distributed to owners.

Project applicants shall retain a qualified air quality consultant to prepare a Health Risk Assessment (HRA) in accordance with BAAQMD requirements to determine the exposure of project residents/occupants/users to air pollutants prior to issuance of a grading permit, or issuance of a building permit, whichever is sooner. The HRA shall be submitted to the Community Development Department for review and approval.

For individual projects, the HRA shall be completed and identified recommendations in order to reduce exposure to TACs below BAAQMD thresholds of significance, if any, in the HRA shall be incorporated into design and construction documents as

Conditions of Approval prior to issuance of grading permit or building permit, whichever is sooner.

**Outdoor Air Quality:** Individual and common exterior open space, including playgrounds, patios, and decks, shall either be shielded from the source of air pollution by buildings or otherwise buffered to further reduce air pollution for project occupants.

**Mitigation Measures for the Proposed Project**

Implement MM AIR-1a and MM AIR-1b. As discussed above, an HRA, as required by MM AIR-1b, has already been prepared for the proposed project.

Environmental Issue Area	Housing Element Update FEIR Determination	Effect Peculiar to Project or Site?	New Significant Effect?	New Significant Off-site, Cumulative Impact?	New Information, More Severe Adverse Impact?

f) Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or State Habitat Conservation Plan?	No impact	No	No	No	No

The project site is undeveloped and includes grasses and forbs that are regularly disked, shrubs, and 10 on-site trees. The following project-specific discussions are based primarily on a Biological Resources Analysis (BRA) prepared for the proposed project by Integral Consulting, Inc., consistent with MM BIO-1 (see Appendix B),<sup>6</sup> as well as a Tree Inventory Report prepared for the proposed project by Horticultural Associates (see Appendix C).<sup>7</sup>

<sup>6</sup> Integral Consulting, Inc. *Vineyard Site Biological Resource Analysis*. August 2024.

<sup>7</sup> Horticultural Associates. *Tree Inventory Report, Vineyard Avenue, Pleasanton, CA*. September 13, 2024.

The BRA included a review of the following sources:

- California Natural Diversity Database (CNDDDB) RareFind 5;
- California Native Plant Society's (CNPS) Inventory of Rare, Threatened, and Endangered Plants of California (CNPS Inventory);
- iNaturalist;
- Bumble Bee Watch; and
- Other existing literature.

The CNDDDB query was intended to establish the potential for all special-status species with known occurrences within three miles of the project site. A query of the CNPS Inventory was conducted for special-status species known to occur the U.S. Geological Survey (USGS) 7.5-minute quadrangle that includes the project site to determine additional special-status plant species with the potential to occur on-site. The BRA also included on-site surveys to determine the location and extent of potential waters of the U.S., as well as to conduct site observations related to potential wildlife habitat and sensitive natural communities. The project site was initially surveyed on December 15 and 19, 2023. Additional surveys were conducted as part of the BRA on April 4, July 10, and December 5, 2024.

#### **a) Special-status Species**

Would the project: *Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special-status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Wildlife or United States Fish and Wildlife Service?*

#### **Summary of Housing Element Update FEIR**

The Housing Element Update FEIR indicated the likelihood of encountering special-status species on the potential sites for rezoning is low given the built out nature of the majority of the sites, significant impacts on special-status plant species associated with individual subsequent projects consistent with the Housing Element Update could include the direct loss of individual plants and of habitat areas associated with these special-status plant species. However, several of the sites, including Sites 1 (Lester), 3 (PUSD-Donlon), 14 (St. Elizabeth Seton), 21a and b (Kiewit), 22 (Merritt), 26 (St. Augustine), 27 (PUSD-Vineyard), 29 (Oracle) and portions of Site 24 (Sonoma Drive), are not built out.

Indirect impacts to special-status plant species could include habitat degradation because of impacts to water quantity and quality. Subsequent development consistent with the Housing Element Update could result in

indirect/indirect loss or indirect disturbance of special-status plant or animal species or their habitats.

The General Plan includes policies and programs specifically designed to address potential impacts on special-status species. Because Site 27 (PUSD-Vineyard) is within the Vineyard Avenue Corridor Specific Plan, it would be required to comply with applicable policies and programs, including those related to California tiger salamander. Additionally, special-status species receive protection from various federal and State laws and regulations, including the Endangered Species Act and California Endangered Species Act (CESA).

The United States Fish and Wildlife Service (USFWS) generally requires a permit under Section 10 of the Endangered Species Act for incidental take of federally listed species from development activities. The California Department of Fish and Wildlife (CDFW) generally requires a CESA Section 2081 (b) permit for incidental take of State-listed species from development activities. Compliance with the federal and State endangered species acts, as well as implementation of the General Plan and specific plan goals, policies, and programs discussed previously would reduce potential direct and indirect impacts on special-status species within the potential sites for rezoning. Nonetheless, the potential for impacts to special-status species, migratory birds, or nesting birds remains potentially significant, requiring implementation of MM BIO-1, which requires a qualified Biologist to prepare a project-specific Biological Resources Analysis prior to the issuance of grading permits.

The Housing Element Update FEIR concluded that, with regulatory compliance and implementation of MM BIO-1, development consistent with the Housing Element Update would not result in significant adverse effects to special-status species and impacts would be less than significant.

#### **Proposed Project Analysis and Conclusion**

According to the BRA, a total of 13 special-status plant species are known to occur in the vicinity of the Project site. Such species include the lesser saltscale, alkali milk-vetch, crownscale, brittlescale, Congdon's tarplant, palmate-bracted bird's beak, San Joaquin spearscale, Ferris' goldfields, prostrate vernal pool navarretia, hairless popcornflower, long-styled sand-spurrey, saline clover, and caper-fruited tropidocarpum. All 13 of the foregoing special-status plant species require specialized habitats, including, but not limited to, vernal pools, wetlands, alkaline and/or clay soils, coastal scrub, marshes, and swamps. Such habitats do not occur within the project

site's grassland vegetation communities. Therefore, special-status plant species are not anticipated to occur on-site, and development of the proposed project would result in a less-than-significant impact related to special-status plant species.

According to the BRA, a total of nine special-status wildlife species are known to occur in the vicinity of the project site, including tricolored blackbird, California tiger salamander (central California Distinct Population Segment [DPS]), pallid bat, burrowing owl, Crotch's bumble bee, western bumble bee, Townsend's big-eared bat, American peregrine falcon, and California red-legged frog. Six of the nine foregoing species require specialized habitats that do not occur on-site, including cliffs and large trees, marshes and wetlands, caves or hollow trees, and open grasslands with nectar sources. With respect to the California red-legged frog (*Rana draytonii*) (CRLF), the closest CNDDDB and iNaturalist records occur 2.3 miles from the project site. According to the BRA, the generally accepted dispersal range for CRLF is approximately two miles, which places the project site outside of the dispersal range for the locally extant CRLF population. While technically potentially suitable CRLF upland dispersal habitat occurs on-site, the species is not expected to occur due to excessive distance. Therefore, the BRA concluded that the only special-status wildlife species with the potential to occur on-site include burrowing owl and California tiger salamander.

According to the BRA, active ground squirrel colonies occur throughout the project site. The open grassland and on-site ground squirrel burrows could provide the necessary nesting habitat for the species, which is known to occur in the vicinity of the site. Therefore, the BRA concluded that the project site could support breeding burrowing owls. Development of the proposed project could therefore have a substantial adverse effect, either directly or through habitat modifications, on burrowing owl, and a significant impact could occur.

With respect to California tiger salamander, the BRA establishes that the project site provides suitable upland dispersal habitat for any individuals of the species within dispersal proximity of suitable breeding habitat. According to the CNDDDB query conducted for the site, a suitable breeding pond was reported in 1992 within the Shadow Cliffs Regional Recreation Area (CNDDDB Occurrence No. 530). However, the exact location of the pond was not recorded and the record is considered potentially extirpated. Furthermore, according to the BRA, California tiger salamander breeding records do not occur within the generally accepted dispersal range for the species (1.3

miles). A freshwater pond that could provide suitable breeding habitat is documented within 1.3 miles of the project site, and several CNDDDB records for juvenile and adult members of the species dispersing also occur within that range. The closest record for dispersing adult California tiger salamanders occurs approximately 0.5-mile from the project site on Vineyard Avenue (CNDDDB Occurrence No. 169). As such, the project site provides potentially suitable upland dispersal habitat for California tiger salamander. Development of the proposed project could, therefore, have a substantial adverse effect, either directly or through habitat modifications, on California tiger salamander, and a significant impact could occur.

The BRA also notes that the project site could provide suitable nesting habitat for a variety of nesting birds and raptors, which are protected by the Migratory Bird Treaty Act (MBTA). Nests were not observed on-site during the surveys conducted as part of the BRA; however, the potential for protected bird species to nest within the project site during future nesting seasons cannot be completely eliminated. Therefore, development of the proposed project could have a substantial adverse effect, either directly or through habitat modifications, on protected bird species, and a significant impact could occur.

MM BIO-1, as presented in the Housing Element Update FEIR, requires that development projects prepare a BRA that includes site-specific measures to reduce potential impacts to a less-than-significant level. Consistent with MM BIO-1, the BRA prepared for the proposed project includes site-specific measures to address burrowing owl, California tiger salamander, and nesting birds and raptors. The City of Pleasanton would require the proposed project to comply with the site-specific measures within the BRA as a Condition of Approval. Additionally, the proposed project would be required as a Condition of Approval to preserve an equivalent amount of California tiger salamander upland dispersal habitat by mitigation C-2 of the Vineyard Avenue Corridor Specific Plan.

Based on the above, potential impacts to special-status species associated with the proposed project were adequately addressed in the Housing Element Update FEIR, and the proposed project would not result in any peculiar effects that would require further CEQA review.

**b, c) Sensitive Natural Communities or Riparian Habitat and State or Federally Protected Waters and Wetlands**

- Would the project:
- b) Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, and regulations or by the California Department of Fish and Wildlife or United States Fish and Wildlife Service? or*
  - c) Have a substantial adverse effect on State or federally protected wetlands (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?*

**Summary of Housing Element Update FEIR**

The Housing Element Update FEIR indicated the Planning Area is likely to contain sensitive communities (e.g., oak woodlands and riparian habitat). Based on the generalized habitats presented in Exhibit 3.3-1 of the Housing Element Update Draft EIR, Site 1 (Lester) may contain undisturbed oak woodland habitat, which has the potential to provide habitat for many special-status species. Therefore, development consistent with the Housing Element Update could result in direct or indirect effects on riparian habitat and other sensitive communities because of project construction.

The Housing Element Update FEIR concluded future development consistent with the Housing Element Update would be required to comply with adopted State, federal, and local regulations for the protection of riparian habitat and other sensitive natural communities. These include the Clean Water Act's regulations of some sensitive natural communities and aquatic habitats qualifying as protected wetlands or jurisdictional waters, CDFW's "Streambed Alteration Agreement," and the General Plan's goals, policies, and programs protecting riparian habitat and other sensitive natural communities. Nonetheless, the potential for impacts to sensitive natural communities or riparian habitat remains potentially significant, requiring implementation of MM BIO-1, which requires a qualified Biologist prepare a project-specific Biological Resources Analysis prior to the issuance of grading permits.

Implementation of these goals, policies, programs, requirements, and MM BIO-1 would reduce potential impacts to less than significant. Therefore, the Housing Element Update FEIR concluded future development consistent with the Housing Element Update would not result in significant adverse effects to riparian habitat or other sensitive natural communities, and impacts would be less than significant.

The Housing Element Update FEIR indicated that wetlands are found throughout the Planning Area and could be within the potential sites for rezoning. Therefore, individual development projects consistent with the Housing Element Update could result in impacts to State and federally protected waters and wetlands.

Although subsequent projects may impact protected wetlands, the regulatory process that is established through Section 404 of the Clean Water Act (CWA) would ensure that there is “no net loss” of protected wetlands. Section 401 of the CWA (33 USC § 1341) requires an applicant who is seeking a 404 permit to also obtain a water quality certification from the Regional Water Quality Control Board (RWQCB), which must indicate that the proposed fill is consistent with the standards set forth by the State and confirm that any discharge into regulated wetlands comply with applicable water quality standards. In addition to the regulations discussed above, because Site 27 (PUSD-Vineyard) is within the Vineyard Avenue Corridor Specific Plan Area, development of this site would also be required to adhere to the requirements in the Vineyard Avenue Corridor Specific Plan.

Compliance with these goals, policies, programs, and State and federal requirements would reduce impacts; however, the potential for impacts to State or federally protected waters and wetlands remains potentially significant. Accordingly, prior to the issuance of grading permits, a qualified Biologist/wetland regulatory specialist would conduct a site investigation and assessment for projects on sites where potentially jurisdictional wetlands or waterways are present. MM BIO-1 further requires that if a feature is found to be jurisdictional or potentially jurisdictional that the applicant would be required, prior to disturbance of the feature, to comply with the appropriate permitting process of each agency claiming jurisdiction.

The Housing Element Update FEIR concluded that with mandatory regulatory compliance and implementation of MM BIO-1, future development projects consistent with the Housing Element Update would have less than significant adverse effects related to federally protected wetlands, waters of the United States, or waters of the State.

#### **Proposed Project Analysis and Conclusion**

As discussed in Section 3.3 of the BRA prepared for the proposed project, the project site does not contain any wetlands or aquatic features. Therefore, the proposed project would not result in adverse impacts upon sensitive natural communities, and impacts related to having a substantial adverse effect on riparian habitat, sensitive natural communities, or federally protected

wetlands were adequately addressed in the Housing Element Update FEIR. The proposed project would not result in any peculiar effects that would require further CEQA review related to effects on any riparian habitat, protected wetlands, or other sensitive natural communities.

**d) Fish and Wildlife Movement Corridors**

Would the project: *Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of wildlife nursery sites?*

**Summary of Housing Element Update FEIR**

The Housing Element Update FEIR indicated some of the potential sites for rezoning may contain wildlife movement corridors. Therefore, future development consistent with the Housing Element Update could result in impacts to wildlife movement corridors or nursery sites and also has the potential to interfere with the movement of native resident migratory fish or wildlife species.

Future development consistent with the Housing Element Update would be required to comply with adopted State, federal, and local regulations for the protection of fish and wildlife movement corridors in addition to the goals, policies, and programs related to fish and wildlife movement corridors in the General Plan. Compliance with these goals, policies, programs, and State and federal requirements would reduce impacts; however, the potential for impacts to fish and wildlife movement corridors remains potentially significant, and would require the implementation of MM BIO-1, which requires that focused surveys be conducted to determine whether special-status species, nesting birds, or migratory birds occur on a given project site, and that potential impacts to special-status species be avoided and minimized. MM BIO-1 also requires that a site investigation and assessment be conducted for projects on sites where potentially jurisdictional wetlands or waterways are present, and compliance with the appropriate permitting process of each agency claiming jurisdiction prior to disturbance of the feature would also protect wildlife movement corridors.

Therefore, the Housing Element Update FEIR concluded that with mandatory regulatory compliance and implementation of MM BIO-1, future development consistent with the Housing Element Update would not result in significant adverse effects to wildlife corridors or native wildlife nursery sites, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife species to drop below self-sustaining levels, eliminate a plant or

animal community, or substantially reduce the number or restrict the range of a species and impacts would be less than significant.

#### **Proposed Project Analysis and Conclusion**

A wildlife corridor is a portion of land that adjoins two or more larger areas of similar natural environment, often connecting wildlife populations separated by natural or created activities, disturbances, or structures. Wildlife corridors are used for the dispersal and migration of wildlife, allowing for genetic exchange, population growth, access to suitable habitat, and the reduction of habitat fragmentation. A nursery site is an area where juvenile wildlife species occur at higher densities, avoid predation more successfully, and/or grow faster than in a different habitat.

While the on-site trees provide marginal resting and roosting habitat for bird species, the site is regularly disturbed, surrounded on three sides by existing development, and does not offer the necessary protection or resources required to be considered a wildlife corridor or nursery site. As previously discussed, the project site does not include aquatic resources that could be used as movement corridors by aquatic species.

Based on the above, impacts related to interfering substantially with the movement of any resident or migratory fish or wildlife species or with established resident or migratory wildlife corridors, or impede the use of wildlife nursery sites were adequately addressed in the Housing Element Update FEIR, and the proposed project would not result in any peculiar effects that would require further CEQA review related to such.

#### **e) Local Biological Resources Policies/Ordinances Consistency**

Would the project: *Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?*

#### **Summary of Housing Element Update FEIR**

The Housing Element Update FEIR indicated that Heritage Trees are located throughout the Planning Area and could be within the potential sites for rezoning. Therefore, development within the potential sites for rezoning could impact Heritage Trees, resulting in conflicts with local policies or ordinances protecting biological resources.

Future development consistent with the Housing Element Update would be subject to all applicable local policies and regulations related to the protection of biological resources, including the City's Tree Preservation Ordinance (Chapter 17.16 of the Municipal Code), which would protect

Heritage Trees by requiring a tree survey plan or tree report be prepared by a certified arborist at the discretion of the City's Community Development Director. The Housing Element Update FEIR concluded that compliance with applicable goals, policies, programs, and State and federal requirements would reduce impacts to less than significant.

### **Proposed Project Analysis and Conclusion**

Section 17.16.010 (Permit-Required) of the City's Municipal Code requires the approval of a tree removal permit prior to the removal of any heritage trees, defined in part as any single-trunked tree with a trunk circumference of 55 inches or more measures at 4.5 feet above ground level; any multi-trunked tree of which the two large trunks have a circumference of 55 inches or more measures at 4.5 feet above ground level; or any tree 35 feet or more in height.

A Tree Inventory Report was prepared for the proposed project by Horticultural Associates (see Appendix C),<sup>8</sup> as well as an additional Addendum to the original Tree Inventory Report (see Appendix D).<sup>9</sup> The Tree Inventory Report evaluated all 10 on-site trees, which are comprised of three olive trees (*Olea europaea*) and seven black walnut trees (*Juglans nigra*). The olive trees are part of entry landscaping, while the black walnuts are remnants of past agricultural activities in the surrounding area. According to the Tree Inventory Report Addendum, four of the existing trees are considered heritage trees and are protected under the City's Municipal Code. However, as discussed in the Tree Inventory Report Addendum, all on-site trees can be preserved.

Pursuant to CEQA Guidelines Section 15183(f), "An effect of a project on the environment shall not be considered peculiar to the project or the parcel for the purposes of this section if uniformly applied development policies or standards have been previously adopted by the city or county with a finding that the development policies or standards will substantially mitigate that environmental effect when applied to future projects, unless substantial new information shows that the policies or standards will not substantially mitigate the environmental effect. [...]" In the case of the proposed project, if on-site trees required removal, the proposed project would be required to comply with Chapter 17.16 of the Municipal Code. Compliance with the City's tree ordinance would substantially mitigate effects related to the removal of on-

---

<sup>8</sup> Horticultural Associates. *Tree Inventory Report, Vineyard Avenue, Pleasanton, CA*. September 13, 2024.

<sup>9</sup> Horticultural Associates. *Addendum to Tree Inventory Report*. November 23, 2024.

site trees by requiring the approval of a tree removal permit if any trees require removal, and the preservation and protection of trees whenever feasible.

Based on the above, impacts related to conflicting with local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance, were adequately addressed in the Housing Element Update FEIR, and the proposed project would not result in any peculiar effects that would require further CEQA review related to such.

**f) Habitat/Natural Community Conservation Plan Consistency**

Would the project: *Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or State Habitat Conservation Plan?*

**Summary of Housing Element Update FEIR**

The Housing Element Update FEIR indicated none of the potential sites for rezoning are within any Habitat Community Plan (HCP), natural community conservation plan, or other approved HCP.

All of the potential sites for rezoning are within the boundaries of the East Alameda County Conservation Strategy (EACCS); however, the EACCS is not considered an HCP. The EACCS is intended to provide guidance during the project planning and permitting process to ensure that impacts are offset in a biologically effective manner. Individual development projects would be required to comply with the EACCS, which would be confirmed during each project's approval process. As such, there would be no conflicts with any HCP or natural community conservation plan and the Housing Element Update FEIR concluded there would be no impact.

**Proposed Project Analysis and Conclusion**

The City of Pleasanton is not subject to any currently adopted HCP or Natural Community Conservation Plan (NCCP). Therefore, impacts related to conflicting with an adopted HCP, NCCP, or other approved local, regional, or state habitat conservation plan were adequately addressed in the General Plan EIR, and the proposed project would not result in any peculiar effects that would require further CEQA review related to such.

**Conclusion**

With regards to Biological Resources, the consistency checklist demonstrates that:

1. No peculiar impacts related to the proposed project or its site have been identified.
2. There are no potentially significant off-site and/or cumulative impacts which were not discussed by the Housing Element Update FEIR.
3. No substantial new information has been identified which results in an impact which is more severe than anticipated by the Housing Element Update FEIR.
4. MM BIO-1 from the Housing Element Update FEIR, would be required and would reduce potential impacts to below a level of significance consistent with the analysis in the Housing Element Update FEIR.

## Mitigation Measures

### Housing Element Update FEIR Mitigation Measures

#### MM BIO-1 Biological Resource Assessment

Prior to the approval of any site-specific entitlement, applicants or sponsors of projects on sites where potential special-status species, migratory birds, or nesting birds are determined to be present by a qualified Biologist, then the applicants or sponsors of projects shall retain a qualified Biologist and/or Wetland Regulatory Specialist to prepare a Biological Resource Assessment (BRA).

The BRA shall include a project-specific analysis of potential impacts on all biological resources, including impacts on special-status species and their habitat, migratory birds and other protected nesting birds, roosting bats, rare plants, sensitive communities, protected waters and wetlands (analyze project-specific compliance with Clean Water Act [CWA], Porter-Cologne Water Quality Act, and Fish and Game Code, as applicable), wildlife corridors and nursery sites. The BRA shall develop and define prescriptive and site-specific measures reducing potential impacts to a less than significant level. These measures shall be included as conditions of approval for the project and be incorporated into building and grading permits issued for demolition and construction. If a water feature is found to be jurisdictional or potentially jurisdictional, the applicant shall comply with the appropriate permitting process with each agency claiming jurisdiction prior to disturbance of the water feature.

The project applicant or sponsor shall ensure that, if development of habitat occupied by special-status species, migratory or nesting birds must occur as determined by a qualified Biologist and/or Wetland Regulatory Specialist, species impacts shall be avoided or minimized, and, if required by a regulatory agency or the CEQA process, loss of wildlife habitat or individual plants shall be fully compensated on a site. If on-site mitigation is not feasible in the City's or regulatory agency's discretion, it shall occur within the City of Pleasanton Planning Area whenever possible, with a priority given to existing habitat mitigation banks. Habitat mitigation shall be accompanied by a long-term management plan and monitoring program prepared by a qualified Biologist and include provisions for protection of mitigation lands in perpetuity through the establishment of easements and adequate funding for maintenance and monitoring; the time frame for the funding shall be detailed in the long-term management plan and monitoring program completed prior to disturbance of occupied habitat.

### **Mitigation Measures for the Proposed Project**

Implement MM BIO-1. It should be noted that a BRA has been prepared for the proposed project consistent with MM BIO-1. The proposed project would be required by the City to comply with all recommendations set forth therein.

Additionally, the proposed project would be required to preserve an equivalent amount of California tiger salamander upland dispersal habitat pursuant to mitigation C-2 of the Vineyard Avenue Corridor Specific Plan.

Environmental Issue Area	Housing Element Update FEIR Determination	Effect Peculiar to Project or Site?	New Significant Effect?	New Significant Off-site, Cumulative Impact?	New Information, More Severe Adverse Impact?
<p><b>V. Cultural and Tribal Cultural Resources</b> <i>Would the project:</i></p>					
a) Cause a substantial adverse change in the significance of a historical resource as pursuant to Section 15064.5?	Less than significant impact	No	No	No	No
b) Cause a substantial adverse change in the significance of an archaeological resource pursuant to Section 15064.5?	Less than significant impact	No	No	No	No

evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code Section 5024.1.					

**a-c) Historical Resources, Archaeological Resources, and Burial Sites**

- Would the project:
- a) *Cause a substantial adverse change in the significance of a historical resource as pursuant to Section 15064.5?*
  - b) *Cause a substantial adverse change in the significance of an archaeological resource pursuant to Section 15064.5? or*
  - c) *Disturb any human remains, including those interred outside of formal cemeteries?*

**Summary of Housing Element Update FEIR**

The Housing Element Update FEIR indicated that development consistent with the Housing Element Update would result in additional development throughout the City. Many of the potential sites for rezoning contain existing commercial or residential buildings, which could potentially be historic resources. Therefore, subsequent development consistent with the Housing Element Update could affect known historic resources or previously unidentified or undesignated resources.

As the City receives development applications for subsequent development consistent with the Housing Element Update, those applications would be reviewed by the City for compliance with the policies and programs of the General Plan and Municipal Code related to the protection of historical resources.

With respect to Site 27 (PUSD-Vineyard), the Vineyard Avenue Corridor Specific Plan includes policies related to conservation and protection of historical resources. The Housing Element Update FEIR notes that Site 25 (PUSD-District) is located just south of a historic neighborhood, and compliance with applicable current federal, State, and local laws as well as

the goals, policies, and programs included in the General Plan would reduce any potential impacts to the resources surrounding Site 25. Lastly, individual development projects that propose to alter a building or structure greater than 45 years of age at the time an application is deemed complete would be required to undergo project-specific environmental review in compliance with CEQA Guidelines Section 15064.5 to determine whether the building or structure may be a historic resource, and take appropriate action such as requiring additional site-specific or project-specific measures to reduce any potential impacts.

Therefore, the Housing Element Update FEIR concluded that compliance with applicable federal, State, and local laws would ensure that future development consistent with the Housing Element Update would not have the potential to eliminate important examples of major periods of California history or prehistory or cause a substantial adverse change in the significance of a designated historical resource or otherwise result in significant adverse effects to historical resources and impacts would be less than significant.

As described in the General Plan, Conservation and Open Space Element, areas of Pleasanton have been surveyed for archaeological resources, and several known archaeological resource sites are located within the City. According to a review of available records by the Northwest Information Center (NWIC), there are several recorded and reported prehistoric and historic archaeological sites in the City, and undiscovered archaeological sites could also exist within the potential sites for rezoning. The Housing Element Update FEIR indicated that development consistent with the Housing Element Update would result in additional development throughout the City and could therefore affect known archaeological resources or previously unidentified or undesignated archaeological resources.

Based on previous cultural resources surveys, it is anticipated that the valley portions of the City have a low sensitivity for prehistoric sites, except along drainages. However, the hills to the west and south, especially around springs and creeks, are anticipated to have a relatively high sensitivity for the presence of prehistoric sites.<sup>10</sup> Most of the potential sites for rezoning are in the valley area, on parcels that have been previously disturbed with development. However, Sites 1 (Lester), 22 (Merritt), and 27 (PUSD-Vineyard)

---

<sup>10</sup> City of Pleasanton. 2011. *City of Pleasanton Housing Element and Climate Action Plan General Plan Amendment and Rezoning Draft Supplemental Environmental Impact Report*. September.

may have only been minimally disturbed in the past and are located outside of the valley area.

The Housing Element Update FEIR further concluded that compliance with applicable current federal, State, and local laws as well as goals, policies, and programs in the General Plan and Vineyard Avenue Corridor Specific Plan, along with the applicable regulations of the Municipal Code would ensure that future development projects are appropriately reviewed and designed in terms of potential impacts to archaeological resources. Consistent with the General Plan policies and programs, individual development projects would be required to undergo project-specific environmental review, which may require additional site-specific or project-specific measures to reduce any potential impacts and ensure that impacts remain less than significant.

The Housing Element Update FEIR indicated that excavation and construction activities consistent with the Housing Element Update may uncover human remains that may not be marked in formal burial locations. Therefore, new development could result in a potentially significant impact on human remains, including those outside of formal cemeteries.

The Housing Element Update FEIR concluded that compliance with applicable goals, policies, and programs in the General Plan and the Vineyard Avenue Corridor Specific Plan, as well as compliance with applicable current State, federal and local regulations, including Public Resources Code 5097 and CEQA Guidelines Section 15064.5(d)—Effects on Human Remains, Health and Safety Code Section 7050.5, would ensure that future development consistent with the Housing Element Update would not result in significant adverse effects to human remains. Therefore, the Housing Element Update FEIR concluded the impacts would be less than significant.

#### **Proposed Project Analysis and Conclusion**

Historical resources are features that are associated with the lives of historically important persons and/or historically-significant events, that embody the distinctive characteristics of a type, period, region or method of construction, or that have yielded, or may be likely to yield, information important to the pre-history or history of the local area, California, or the nation. Examples of typical historical resources include, but are not limited to, buildings, farmsteads, rail lines, bridges, and trash scatters containing objects such as colored glass and ceramics. Historical properties within the Downtown area of the City of Pleasanton are summarized in Table 3.12-1 of

the General Plan EIR. The General Plan EIR does not identify any known historical resources on or adjacent to the project site.

A Cultural Resource Inventory was prepared for the proposed project by Archaeological Resource Service.<sup>11</sup> As part of the Cultural Resource Inventory, a literature search was conducted using information on file at the NWIC of the California Historic Resources Information System (CHRIS). Based on the results of the project-specific CHRIS search, at least 20 cultural resource studies have been previously conducted within a 0.5-mile of the project site. One study from 1998 studied the 380-acre Vineyard Avenue Corridor Specific Plan project area, which includes the project site. According to the Cultural Resource Inventory, neither prehistoric nor historic-era materials and/or sites were identified. Three historic ancillary buildings occur within a 0.5-mile of the project site; however, as discussed throughout this Consistency Checklist, the project site is undeveloped and does not contain historic buildings. As the three historic ancillary buildings are located off-site, the buildings would not be affected by development of the proposed project. Based on the results of the records search of the CHRIS, known historic or archaeological resources have not been identified on or adjacent to the project site. According to the Cultural Resource Inventory prepared for the proposed project, although the age and structure of on-site soil deposits would suggest a reasonable likelihood of buried archaeological resources, the project site has been subject to disturbance over several decades. As such, if subsurface cultural resources were present within the site, the Cultural Resource Inventory concluded that they would exist in a disturbed state. Therefore, development of the proposed project is not anticipated to impact unrecorded cultural resources.

As previously discussed, pursuant to CEQA Guidelines Section 15183(f), “An effect of a project on the environment shall not be considered peculiar to the project or the parcel for the purposes of this section if uniformly applied development policies or standards have been previously adopted by the city or county with a finding that the development policies or standards will substantially mitigate that environmental effect when applied to future projects, unless substantial new information shows that the policies or standards will not substantially mitigate the environmental effect. [...]” Compliance with applicable State and local regulations, including requirements related to stopping work upon discovery of cultural resources as established by the Vineyard Avenue Corridor Specific Plan, would ensure

---

<sup>11</sup> Archaeological Resource Service. *Cultural Resource Inventory*. April 15, 2024.

that any previously unknown archeological and historic resources discovered on-site, including human remains, would not be adversely impacted.

Based on the above, impacts related to causing a substantial adverse change in the significance of a historic or archaeological resource pursuant to CEQA Guidelines Section 15064.5 and/or disturbing human remains, including those interred outside of formal cemeteries, were adequately addressed in the Housing Element Update FEIR, and the proposed project would not result in any peculiar effects that would require further CEQA review related to such.

**d, e) Listed or Eligible Tribal Cultural Resources and Lead Agency Determined Tribal Cultural Resources**

- Would the project:
- d) *Cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code Section 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code Section 5020.1(k)? or*
  - e) *Cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code Section 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is a resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code Section 5024.1?*

**Summary of Housing Element Update FEIR**

The Housing Element Update FEIR indicated that development consistent with the Housing Element Update could affect known or previously unidentified Tribal Cultural Resources (TCRs). Therefore, potential unidentified eligible TCRs could be adversely affected by development consistent with the Housing Element Update, resulting in a potentially significant impact.

However, the Housing Element Update FEIR concluded that the implementation of policies and programs in the General Plan, Municipal Code, Vineyard Avenue Corridor Specific Plan, as well as compliance with

applicable current State, federal and local regulations, including, but not limited to Senate Bill (SB) 18 and Assembly Bill (AB) 52, would reduce potential impacts to existing or undiscovered eligible TCRs within the potential sites for housing to less than significant.

The Housing Element Update FEIR further indicated that the City, in its capacity as lead agency, has not identified TCRs on the potential sites for housing pursuant to criteria set forth in subdivision (c) of Public Resources Code Section 5024.1 that would be adversely impacted by development consistent with the Housing Element Update. The City notified the Amah Mutsun Tribal Band, the Coastanoan Rumsen Carmel Tribe, the Indian Canyon Mutsun Band, the Muwekma Ohlone Indian Tribe of San Francisco Bay, the North Valley Yokuts Tribe, the Ohlone Indian Tribe, and Wilton Rancheria of the Housing Element Update and invited the tribes to participate in consultation. As of the date of certification of the EIR, no responses were received. Nonetheless, as described under impact V(d), future development consistent with the Housing Element Update could affect previously unidentified TCRs.

As discussed under impacts V(a) through V(d), the Housing Element Update FEIR concluded that the General Plan includes policies and programs to conserve and reduce impacts to TCRs. Additionally, the Vineyard Avenue Corridor Specific Plan includes policies that would minimize impacts to TCRs. Therefore, the Housing Element Update FEIR concluded that implementation of applicable goals, policies, and actions in the General Plan; the Vineyard Avenue Corridor Specific Plan; and applicable current State, federal and local regulations, including, but not limited to, SB 18 and AB 52 would ensure that potential impacts to existing or undiscovered eligible TCRs within the potential sites for housing would be less than significant.

#### **Proposed Project Analysis and Conclusion**

According to the Cultural Resource Inventory, a search of the Native American Heritage Commission (NAHC) Sacred Lands File (SLF) was conducted for the project site on March 21, 2024. A response was returned on March 27, 2024, which yielded a negative result to indicate a lack of known tribal resources within the project site and/or the general vicinity. The NAHC response also included a list of tribes affiliated with the project area; however, AB 52 (PRC Section 21080.3.1) notification to tribes is not required for the proposed project given that this checklist determines no additional environmental review is required for the project, consistent with CEQA Guidelines Section 15183.

Given that the proposed project would be consistent with the type of development anticipated for the site by the City, buildout of the project site and potential disturbance of buried prehistoric, historical, or archaeological resources, which could include TCRs, has been anticipated by the City and analyzed in the Housing Element Update FEIR. In addition, as previously discussed, pursuant to CEQA Guidelines Section 15183(f), “An effect of a project on the environment shall not be considered peculiar to the project or the parcel for the purposes of this section if uniformly applied development policies or standards have been previously adopted by the city or county with a finding that the development policies or standards will substantially mitigate that environmental effect when applied to future projects, unless substantial new information shows that the policies or standards will not substantially mitigate the environmental effect. [...]” In the case of the proposed project, compliance with General Plan policies, such as Policy 5 of the Conservation and Open Space Element related to preserving cultural and historic resources significant to the City because of their age, appearance, or history, would help avoid impacts to TCRs. In addition, the City requires a standard Condition of Approval for projects requiring Planning Department approval that would require all construction activities to stop in the event that TCRs were uncovered during excavation; the Condition of Approval further specifies that procedures should be followed pursuant to CEQA requirements. Furthermore, pursuant to the CHRIS and NAHC SLF searches, known TCRs do not occur on-site or in the site vicinity.

Based on the above, the proposed project is not expected to adversely impact TCRs. Therefore, impacts related to resulting in a substantial adverse change in the significance of a TCR were adequately addressed in the Housing Element Update FEIR, and the proposed project would not result in any peculiar effects that would require further CEQA review related to such.

## **Conclusion**

With regards to Cultural and Tribal Cultural Resources, the consistency checklist demonstrates that:

1. No peculiar impacts related to the proposed project or its site have been identified.
2. There are no potentially significant off-site and/or cumulative impacts which were not discussed by the Housing Element Update FEIR.

3. No substantial new information has been identified which results in an impact which is more severe than anticipated by the Housing Element Update FEIR.
4. No mitigation measures would be required because the proposed project's specific impacts would be less than significant.

### **Mitigation Measures**

None.

Environmental Issue Area	Housing Element Update FEIR Determination	Effect Peculiar to Project or Site?	New Significant Effect?	New Significant Off-site, Cumulative Impact?	New Information, More Severe Adverse Impact?
<b>VI. Energy</b> <i>Would the project:</i>

- Would the project:
- a) *Result in potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation? or*
  - b) *Conflict with or obstruct a State or local plan for renewable energy or energy efficiency?*

**Summary of Housing Element Update FEIR**

*Construction Energy Usage*

The Housing Element Update FEIR indicated the implementation of the Housing Element Update could result in an increase in new residential land uses and construction which could potentially result in a wasteful, inefficient, or unnecessary consumption of energy resources during construction.

The Housing Element Update does not expressly authorize construction of any development. Construction activities associated with individual development projects consistent with the Housing Element Update would consume energy in the form of petroleum fuel for heavy equipment, as well as from worker

trips and material delivery trips to construction sites. Temporary electrical grid power may also be provided to construction sites. Development consistent with the Housing Element Update would be required to comply with standards for new construction established by the State and Bay Area Air Quality Management District (BAAQMD) and development standards in the California Energy Code, CALGreen, the Municipal Code and other applicable federal, State, and local laws. The Housing Element Update EIR concluded with adherence to applicable regulations, development consistent with the Housing Element Update would not result in wasteful, inefficient, or unnecessary consumption of energy during construction.

#### *Operational Energy Usage*

The Housing Element Update would be considered to result in a potentially significant impact if it would result in wasteful, inefficient, or unnecessary consumption of energy resources defined as conflicting with three energy conservation goals. These are (1) decreasing overall per capita energy consumption, (2) decreasing reliance on fossil fuels such as coal, natural gas, or oil, and (3) increasing reliance on renewable energy sources.

Development consistent with the Housing Element Update is considered consistent with the decreasing overall per capita energy consumption criterion for the following reasons. Energy consumption related to per capita transportation would decrease from that experienced by the region's current per capita transportation energy consumption patterns. Development consistent with the Housing Element Update could result in a maximum of 18,029 residents, and the per capita energy consumption is estimated at 1,946 kilowatt hours (kWh) per year and 5.28 Metric Million British Thermal Unit (MMBtu) per year, both of which would be below the County's average electricity and natural gas consumption rates.

Development consistent with the Housing Element Update is considered consistent with the decreasing reliance on fossil fuels criterion for the following reasons. Implementation of the Housing Element Update would result in population growth which outpaces the forecasted VMT growth, which would result in a relative decrease from the County per capita consumption rates for natural gas and electricity. Because of the incremental increase of renewable and carbon-free generation sources for in-state electricity sales through 2045 as required under SB 100—a decrease in per capita natural gas and transportation fuels translate directly to a decrease in reliance on fossil fuel energy resources. Various strategies contained in the

CAP 2.0 would further reduce energy consumption and reliance on fossil fuel energy resources.

Development consistent with the Housing Element Update is consistent with the increasing reliance on renewable energy sources criterion for the following reasons. New construction would be designed and constructed consistent with the State's Title 24 Building Energy Efficiency Standards and would be required to incorporate a series of renewable energy design and energy efficiency features. Additionally, the CAP 2.0 contains several measures which would further increase reliance on renewable energy resources.

For these reasons, the Housing Element Update FEIR concluded energy consumption associated with development consistent with the Housing Element Update would not be wasteful, inefficient, or unnecessary, consistent with the energy considerations contained in State CEQA Guidelines Appendix F, and this impact would be less than significant.

The Housing Element Update FEIR also indicated development envisioned by the Housing Element Update could result in an increase in new residential land uses which could potentially obstruct a State or local plan for renewable energy or energy efficiency. However, it should be noted that the Housing Element Update does not expressly authorize construction of any development.

New residential development facilitated by the Housing Element Update would be required to comply with the General Plan policies and programs and adherence to the development standards within Title 9 and Title 20 in the Municipal Code as well as other applicable State and local regulations. In addition, development consistent with the Housing Element Update would have to comply with applicable State or regional plans for renewable energy or energy efficiency that include Plan Bay Area 2050; BAAQMD 2017 Clean Air Plan; 2007 State Alternative Fuels Plan; Executive Order N-79-20, requiring, 100 percent of new passenger vehicles sold in California to be zero-emissions by 2035; 2008 Energy Action Plan Update; 2011 Energy Efficiency Strategic Plan; and SB 100, requiring 100 percent of retail sales of electricity to be generated from zero-carbon emission sources by the end of 2045. Moreover, development consistent with the Housing Element Update would support the CAP 2.0 strategies for renewable energy and energy efficiency by implementing various General Plan policies that would apply to future development facilitated by the Housing Element Update.

Therefore, the Housing Element Update FEIR concluded compliance with the policies stated above would ensure that development consistent with the Housing Element Update would not conflict with or obstruct State or local plans for renewable energy or energy efficiency, and this impact would be less than significant.

#### **Proposed Project Analysis and Conclusion**

Construction of the proposed project would involve on-site energy demand and consumption related to use of oil in the form of gasoline and diesel fuel for construction worker vehicle trips, hauling and materials delivery truck trips, and operation of off-road construction equipment. In addition, diesel-fueled portable generators may be necessary to provide additional electricity demands for temporary on-site lighting, welding, and for supplying energy to areas of the site where energy supply cannot be met through a hookup to the existing electricity grid. Project construction would not involve the use of natural gas appliances or equipment.

Even during the most intense period of construction, due to the different types of construction activities (e.g., demolition, site preparation, grading, building construction), only portions of the project site would be disturbed at a time, with operation of construction equipment occurring at different locations on the project site, rather than a single location. In addition, all construction equipment and operation thereof would be regulated pursuant to the ARB In-Use Off-Road Diesel Vehicle Regulation, which is intended to reduce emissions from in-use, off-road, heavy-duty diesel vehicles in California by imposing limits on idling, requiring all vehicles to be reported to ARB, restricting the addition of older vehicles into fleets, and requiring fleets to reduce emissions by retiring, replacing, or repowering older engines, or installing exhaust retrofits. The In-Use Off-Road Diesel Vehicle Regulation would subsequently help to improve fuel efficiency and reduce GHG emissions. Technological innovations and more stringent standards are being researched, such as multi-function equipment, hybrid equipment, or other design changes, which could help to reduce demand on oil and emissions associated with construction.

The proposed project would also be required to comply with the provisions of Chapter 9.21, Construction and Demolition Debris, of the City's Municipal Code, through preparation and approval of a WMP. The WMP would include project information, the hauling and disposal method, the estimated quantities of materials to be salvaged and/or disposed, and the facility or facilities to which materials would be transported.

Based on the above, the temporary increase in energy use during construction of the proposed project would not result in a significant increase in peak or base demands or require additional capacity from local or regional energy supplies. The proposed project would be required to comply with all applicable regulations related to energy conservation and fuel efficiency, which would help to reduce the temporary increase in demand.

Energy use associated with operation of the proposed project would be typical of residential uses, requiring electricity for interior and exterior building lighting, operation of stoves, kitchen and cleaning appliances, and more. Maintenance activities during operations, such as landscape maintenance, would involve the use of electric or gas-powered equipment. In addition to on-site energy use, the proposed project would result in transportation energy use associated with vehicle trips generated by residents.

The proposed project would be subject to all relevant provisions of the CALGreen Code and the Building Energy Efficiency Standards, which would ensure that the proposed structures consume energy efficiently through the incorporation of such features as efficient water heating systems, high-performance attics and walls, and high-efficacy lighting. The CALGreen Code requires that new residential buildings use a combination of energy efficiency and distributed renewable energy generation to meet all annual energy needs. Required compliance with the standards and regulations noted above would ensure that the building energy use associated with the proposed project would not be wasteful, inefficient, or unnecessary.

In regard to transportation energy use, the proposed project would comply with all applicable regulations associated with vehicle efficiency and fuel economy. In addition, as discussed in Section XVII, Transportation, the project site is located within close proximity to existing residential neighborhoods, transit infrastructure, and bicycle infrastructure; the proposed project would also incorporate six bicycle parking spaces within bike racks at the proposed park area. The availability of such transit, bicycle, and pedestrian infrastructure in the project vicinity would help to reduce VMT associated with the project and reduce fuel consumption.

Based on the above, compliance with the State's latest Energy Efficiency Standards would ensure that the proposed project would implement all necessary energy efficiency regulations, and compliance with local regulations, which prohibit the use of natural gas, would contribute to the efficient use of energy resources. Additionally, the inclusion of sustainable

features by the proposed project would further reduce any impacts associated with energy consumption.

## **Conclusion**

With regards to Energy, the consistency checklist demonstrates that:

1. No peculiar impacts related to the proposed project or its site have been identified.
2. There are no potentially significant off-site and/or cumulative impacts which were not discussed by the Housing Element Update FEIR.
3. No substantial new information has been identified which results in an impact which is more severe than anticipated by the Housing Element Update FEIR.
4. No mitigation measures would be required because the proposed project's specific impacts would be less than significant.

## **Mitigation Measures**

None.

A Geotechnical Investigation Report was prepared for the proposed project by Aftershock Geotechnical (Aftershock) (see Appendix E).<sup>12</sup> As part of the Geotechnical Investigation Report, Aftershock conducted 10 exploratory

<sup>12</sup> Cornerstone Earth Group. *Geotechnical Investigation: Hopyard Road Residential Development*. August 30, 2023.

borings up to a depth of eight feet below ground surface (bgs). According to the Geotechnical Investigation Report, materials encountered in the borings were predominantly dark brown, moist, stiff sandy clay with trace subangular gravel to an approximate depth of four to five feet. Below four to five feet bgs, the material generally remained sandy clay but the material became very stiff and dark to medium brown in color. In addition, the project site is relatively flat with a gradual slope. The peak elevation of 428 feet occurs near the intersection of Manoir Lane and Old Vineyard Avenue. The low point occurs near the intersection of Thiessen Street and Vineyard Avenue with an elevation of 392 feet. Grades from the east and west fall towards the center of the site creating a valley. Finally, the Geotechnical Investigation Report notes the presence of some undocumented fill along the northern project site boundary, likely the result of grading activities along Vineyard Avenue. Groundwater was not encountered in any of the exploratory borings and is estimated at depths of 25 to 30 feet bgs. The Geotechnical Investigation Report did not note the presence of either septic tanks or paleontological resources on-site.

#### **a) Earthquakes**

Would the project: *Directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury or death involving: (i) Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault; (ii) Strong Seismic Ground Shaking; (iii) Seismic-related ground failure, including liquefaction; or (iv) Landslides.*

#### **i and ii) Surface Fault Rupture and Strong Seismic Ground Shaking**

##### **Summary of Housing Element Update FEIR**

The Housing Element Update FEIR indicated that the Calaveras Fault and its associated Alquist-Priolo Earthquake Fault Zone intersects the city limits along its western boundary. Because portions of Site 22 (Merritt) are underlain by this Alquist-Priolo Earthquake Fault Zone and Site 2 (Stoneridge Shopping Center, Mall) is just to the east of the fault zone, there is a risk of ground rupture at these sites. Various other sites are within 1 mile of the Pleasanton and Verona Faults and their respective Alquist-Priolo Earthquake Zones. Refer to Draft EIR Exhibit 3.6-2.

The Housing Element Update FEIR concluded that compliance with California Building Standards Code (CBSC), applicable Municipal Code requirements, as well as goals, policies, and programs included as part of the General Plan,

and the Vineyard Avenue Corridor Specific Plan (as applicable) would minimize structural damage and minimize the exposure of people to risk of injury or death from structural failure in the event of surface rupture during an earthquake and ensure that impacts would be less than significant.

The Housing Element Update FEIR further indicated that the Calaveras, Hayward, and San Andreas Faults are most likely to produce the greatest level of ground shaking at the potential sites for rezoning. “Violent” or “severe to violent” ground shaking is expected to occur throughout the City including at several of the potential sites for rezoning. Refer to Draft EIR Exhibit 3.6-3.

The Housing Element Update FEIR concluded that compliance with CBSC, applicable Municipal Code requirements, as well as goals, policies, and programs included as part of the General Plan, and the Vineyard Avenue Corridor Specific Plan (as applicable) would ensure that future development projects are appropriately investigated in terms of potential seismic hazards and that any new buildings and structures are constructed to withstand strong seismic ground shaking and, therefore, impacts would be less than significant.

#### **Proposed Project Analysis and Conclusion**

According to the Geotechnical Investigation Report, the project site is located in the seismically active San Francisco Bay Area. The seismicity of the area is dominated by the San Andreas, Hayward and Calaveras faults; thus, strong ground shaking during a major earthquake on a nearby fault is likely to be felt at this site. The proposed residences would be constructed in accordance with the requirements of the CBSC, which provides minimum standards to ensure that proposed structures would be designed using sound engineering practices and appropriate engineering standards for the seismic area in which the project site is located. Projects designed in accordance with the CBSC should be able to: 1) resist minor earthquakes without damage; 2) resist moderate earthquakes without structural damage, but with some non-structural damage; and 3) resist major earthquakes without collapse, but with some structural, as well as non-structural, damage. Although conformance with the CBSC does not guarantee that substantial structural damage would not occur in the event of a maximum magnitude earthquake, conformance with the CBSC can reasonably be assumed to ensure that structures would be survivable, allowing occupants to safely evacuate in the event of a major earthquake. As previously discussed, compliance with applicable General Plan policies and the CBSC would ensure impacts related to fault rupture hazards and seismic ground shaking

would be less than significant. Furthermore, according to the Geotechnical Investigation Report, the site is not located in an earthquake fault zone as designated by the State of California.

Based on the above, impacts related to seismic rupture of a known earthquake fault or strong seismic ground shaking were adequately addressed in the Housing Element Update FEIR, and the proposed project would not result in any effects that would require further CEQA review for this topic.

### **iii) Seismic-related Ground Failure, Including Liquefaction**

#### **Summary of Housing Element Update FEIR**

As indicated in the Housing Element Update FEIR, several sites are within areas susceptible to very low and moderate liquefaction during an earthquake (refer to Draft EIR Exhibit 3.6-5). The Housing Element Update FEIR also indicated that liquefaction-induced lateral spreading could occur in low lying areas within the City. As such, development consistent with the Housing Element Update could potentially be exposed to the effects of landslides, slope instability, liquefaction, subsidence, and lateral spreading from local and regional earthquakes.

The Housing Element Update FEIR concluded that compliance with California Building Standards Code, applicable Municipal Code requirements, as well as goals, policies, and programs included as part of the General Plan, and the Vineyard Avenue Corridor Specific Plan (as applicable) would protect residents, structures, and infrastructure from the effects of surface fault rupture and strong seismic ground shaking, including the secondary effects of earthquake shaking such as, but not limited to, liquefaction. Therefore, it was concluded that impacts related to seismic-related ground failure, such as liquefaction, ground settlement, lurching, lateral spreading, and ground cracking would be less than significant at the programmatic level.

#### **Proposed Project Analysis and Conclusion**

Liquefaction is a phenomenon in which granular material is transformed from a solid state to a liquefied state as a consequence of increased pore-water pressure and reduced effective stress. Increased pore-water pressure is induced by the tendency of granular materials to densify when subjected to cyclic shear stresses associated with earthquakes. According to the Geotechnical Investigation Report prepared for the proposed project, Lots 25 through 27 are located within a Liquefaction Zone of Required Investigation. Therefore, the Geotechnical Investigation Report concluded

that the potential for liquefaction and soil settlement is likely low, but recommended that a confirmation boring be performed as part of the design-level Geotechnical Investigation conducted as required by General Plan policies, including Policies 2 and 5 within the Public Safety Element.

In addition, the CBSC, as adopted by the City in Section 20.08.010 of the Pleasanton Municipal Code, provides standards to protect property and public safety by regulating the design and construction of excavations, foundations, building frames, retaining walls, and other building elements, which would further reduce the potential for seismic-related ground failure, including liquefaction. Compliance with the aforementioned uniformly applicable development regulations would ensure that the potential for risks related to liquefaction would be less than significant and the proposed project would not result in any effects that would require further CEQA review for this topic.

#### **iv) Seismic-related Ground Failure, Including Landslides**

##### **Summary of Housing Element Update FEIR**

As indicated in the Housing Element Update FEIR, aside from Sites 1 (Lester), 22 (Merritt), 23 (Sunol Boulevard), 24 (Sonoma Drive Area), and 26 (St. Augustine), none of the potential sites for rezoning are located within a rainfall-induced landslide hazard zone (Refer to Draft EIR Exhibit 3.6-5).

The Housing Element Update FEIR concluded that compliance with California Building Standards Code, applicable Municipal Code requirements, as well as goals, policies, and programs included as part of the General Plan, and the Vineyard Avenue Corridor Specific Plan (as applicable) would protect residents, structures, and infrastructure from potential substantial adverse effects, including the risk of loss, injury or death involving landslides. Therefore, it was concluded that impacts related to landslides at the programmatic level would be less than significant.

##### **Proposed Project Analysis and Conclusion**

Seismically induced landslides are triggered by earthquake ground shaking. The risk of landslide hazard is greatest in areas with steep, unstable slopes. According to the Geotechnical Investigation Report, strong ground shaking during a major earthquake on a nearby fault is likely to be felt at this site, but the site is not mapped in a Zone of Earthquake Induced Landsliding by the State. Based on the relatively flat nature of the site and not being mapped in a Zone of Earthquake Induced Landsliding, the potential for earthquake induced landsliding is low. Therefore, the findings of the Geotechnical

Investigation Report confirm the Housing Element Update FEIR's conclusion for the site. In addition, compliance with CBSC standards would reduce impacts related to landslides to a less-than-significant level. Overall, impacts related to landslides would be less than significant and the proposed project would not result in any effects that would require further CEQA review for this topic.

**b) Soil Erosion or Topsoil Loss**

Would the project: *Result in substantial soil erosion or the loss of topsoil?*

**Summary of Housing Element Update FEIR**

The Housing Element Update FEIR indicated that development consistent with the Housing Element Update would involve construction activities such as stockpiling, grading, excavation, paving, and other earth-disturbing activities that could result in soil erosion or the loss of topsoil. Soil erosion is dependent on individual site locations and conditions on-site during construction.

The Housing Element Update FEIR concluded that, for construction activities that disturb one or more acre of land surface, compliance with the National Pollutant Discharge Elimination System (NPDES) General Permit for Stormwater Discharges Associated with Construction and Land Disturbance Activities (Order No. 2012-0006-DWQ) would require development and implementation of a Storm Water Pollution Prevention Plan (SWPPP). The SWPPP would result in erosion and sediment controls, runoff water quality monitoring, proper waste disposal, implementation of approved local plans, control of construction sediment and erosion control measures, and identification of maintenance responsibilities, as well as non-stormwater management controls. In addition, compliance with California Building Standards Code, applicable Municipal Code requirements, as well as goals, policies, and programs included as part of the General Plan, and the Vineyard Avenue Corridor Specific Plan (as applicable) would reduce potential soil erosion and loss of topsoil from construction-related soil disturbance. As such, potential impacts related to soil erosion and loss of topsoil would be reduced to less than significant levels.

**Proposed Project Analysis and Conclusion**

Issues related to erosion are discussed in Section X, Hydrology and Water Quality, of this Consistency Checklist. As noted therein, the proposed project would not result in substantial soil erosion or the loss of topsoil.

### c) Unstable Geologic Location

Would the project: *Be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on- or off-site landsliding, lateral spreading, subsidence, liquefaction, or collapse?*

#### Summary of Housing Element Update FEIR

The Housing Element Update FEIR indicated that unstable geologic units or soils, including geologic hazards, such as subsidence or collapse, are present. As such, development consistent with the Housing Element Update could occur within areas containing unstable geologic units or be located on soils that are unstable or could become unstable from such development.

The Housing Element Update FEIR concluded that compliance with California Building Standards Code, applicable Municipal Code requirements, as well as goals, policies, and programs included as part of the General Plan, and the Vineyard Avenue Corridor Specific Plan (as applicable) would ensure that potential impacts associated with development on unstable geologic units or unstable soils would be less than significant.

#### Proposed Project Analysis and Conclusion

Subsidence is the settlement of soils of very low density generally from either oxidation of organic material, or desiccation and shrinkage, or both, following drainage. Subsidence takes place gradually, usually over a period of several years. As previously discussed, the project site contains undocumented fill at the northern project site boundary, likely originating from the grading of Vineyard Avenue. The Geotechnical Investigation Report determined the undocumented fill would not significantly impact the proposed project.

In addition, the CBSC provides standards to protect property and public safety by regulating the design and construction of excavations, foundations, building frames, and other building elements. Compliance with standard construction regulations included in the CBSC would ensure that the proposed project would not directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving subsidence or settlement. Furthermore, final building design and construction at the project site would be completed in conformance with the recommendations of a design-level Geotechnical Investigation. The City of Pleasanton Building and Safety Division and Public Works would review all improvement plans to ensure that all recommendations from the Geotechnical Investigation Report are incorporated. The proposed project would be required to comply with all

applicable policies, regulations, and standards set forth by the State and the City of Pleasanton. Therefore, impacts related to subsidence/settlement would be less than significant and the proposed project would not result in any effects that would require further CEQA review for this topic.

**d) Expansive Soils**

Would the project: *Be located on expansive soil, creating substantial direct or indirect risks to life or property?*

**Summary of Housing Element Update FEIR**

The Housing Element Update FEIR indicated new development constructed on expansive soils could be subject to damage or become unstable when underlying soil shrinks or swells. The actual presence and extent of expansive soils can only be determined as part of site-specific soils and geologic reports.

The Housing Element Update FEIR concluded that compliance with California Building Standards Code, applicable Municipal Code requirements, as well as goals, policies, and programs included as part of the General Plan, and the Vineyard Avenue Corridor Specific Plan (as applicable) would ensure that potential impacts associated with expansive soils would be less than significant.

**Proposed Project Analysis and Conclusion**

Expansive soils increase in volume when they absorb water and have the potential to crack or otherwise compromise the integrity of building foundations.

As part of the Geotechnical Investigation Report, Aftershock performed three Plasticity Index (PI) tests on representative samples of on-site soils. The results of the PI tests indicated PIs ranging between three and six, indicating low expansion potential. In addition, compliance with all applicable CBSC standards would ensure the structural integrity of the proposed structures. Furthermore, final building design and on-site construction would be completed in conformance with the recommendations of the design-level Geotechnical Investigation required by General Plan policies. The City of Pleasanton Building and Safety Division would review all improvement plans to ensure that all recommendations from the design-level Geotechnical Investigation are incorporated.

Based on the above, impacts related to substantial direct or indirect risks to life or property related to being located on expansive soil, as defined in Table

18-1B of the Uniform Building Code (1994), creating substantial direct or indirect risks to life or property were adequately addressed in the Housing Element Update FEIR, and the proposed project would not result in any effects that would require further CEQA review for this topic.

**e) Wastewater Disposal Systems**

Would the project: *Have soils incapable of supporting the use of septic tanks or other alternative wastewater disposal systems where sewers are not available?*

**Summary of Housing Element Update FEIR**

The Housing Element Update FEIR indicated most of the potential sites for rezoning are infill sites; thus, new development consistent with the Housing Element Update would primarily occur on parcels that already contain existing homes or businesses. As such, development consistent with the Housing Element Update would be served by the existing sewer system, and most new development would connect to existing sewer lines. However, should any new development require the installation of septic tanks or alternative wastewater disposal systems, the General Plan includes policies and programs to ensure that any new development can be feasibly constructed according to soil conditions.

The Housing Element Update Draft EIR concluded implementation of policies and programs in the General Plan, as well as applicable Municipal Code requirements, would ensure that new septic tanks or alternative wastewater disposal systems are constructed on soils that can support such systems. Therefore, the impacts would be less than significant.

**Proposed Project Analysis and Conclusion**

The proposed project would connect to existing City sewer services. Thus, the construction or operation of septic tanks or other alternative wastewater disposal systems is not included as part of the project. Therefore, the proposed project would not result in any effects that would require further CEQA review for this topic.

**f) Destruction of Paleontological Resource or Unique Geologic Feature**

Would the project: *Directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?*

**Summary of Housing Element Update FEIR**

The Housing Element Update FEIR indicated that the City is directly underlain by Quaternary Alluvium, which is unlikely to contain vertebrate fossils.

However, it is possible that parts of the City are also underlain by older Quaternary deposits that are known to contain vertebrate fossils. Therefore, the City has moderate paleontological sensitivity.

While shallow excavation or grading is unlikely to uncover paleontological resources, deeper excavation into older sediments may uncover significant fossils. Therefore, any project involving earthmoving activity could potentially result in inadvertent discovery and disturbance of paleontological resources during grading and excavation work. As such, construction-related and earth-disturbing actions from development consistent with the Housing Element Update on sites underlain by older Quaternary deposits have the potential to damage or destroy fossils resulting in significant impacts on paleontological resources.

The Housing Element Update FEIR concluded that compliance with federal and State laws that protect paleontological resources, including Section 5097 of the Public Resources Code, as well as implementation of MM GEO-6, which requires a site-specific paleontological resources survey to determine potential paleontological impacts, would reduce potential impacts to paleontological resources to less than significant. Should a site-specific paleontological resources survey determine that a site is underlain by older Quaternary deposits or any other soil with the potential to contain vertebrate fossils, MM GEO-6 requires paleontological monitoring of all proposed excavations. As such, impacts related to destruction of a paleontological resource or unique geologic feature would be less than significant.

#### **Proposed Project Analysis and Conclusion**

Paleontological resources or fossils are the remains of prehistoric plant and animal life. The soil types at the project site are not considered unique geologic features and are common within the geographic area of the City.

Based on the above, the project site does not contain any peculiar conditions that would result in increased potential for subsurface paleontological resources. In addition, the proposed project would be required to comply with all applicable federal, State, and local requirements to avoid potential adverse effects to paleontological resources if such resources are discovered during ground-disturbing activities on the site. Therefore, impacts related to resulting in the direct or indirect destruction of a unique paleontological resource were adequately addressed in the Housing Element Update FEIR, and the proposed project would not result in any effects that would require further CEQA review for this topic.

## Conclusion

With regards to Geology, Seismicity and Soils, the consistency checklist demonstrates that:

1. No peculiar impacts related to the proposed project or its site have been identified.
2. There are no potentially significant off-site and/or cumulative impacts which were not discussed by the Housing Element Update FEIR.
3. No substantial new information has been identified which results in an impact which is more severe than anticipated by the Housing Element Update FEIR.
4. No mitigation measures from the Housing Element Update FEIR would be required because the proposed project's specific impacts would be less than significant.

## Mitigation Measures

### Housing Element Update FEIR Mitigation Measures

#### MM GEO-6 Paleontological Resource Survey Measure

A professional paleontologist, approved by the City of Pleasanton, shall conduct a site-specific paleontological resources survey on the potential sites for rezoning. If any of the potential sites for rezoning are found to be underlain by older Quaternary deposits, or any other soil with the potential to contain vertebrate fossils due to their high paleontological sensitivity for significant resources, applicants, owners and/or sponsors of all future development or construction projects shall be required to perform or provide paleontological monitoring, if recommended by the qualified paleontologist. Should significant paleontological resources (e.g., bones, teeth, well-preserved plant elements) be unearthed by a future project construction crew, project activities shall be diverted at least 15 feet from the discovered paleontological resources until a professional paleontologist has assessed such discovered resources and, if deemed significant, such resources shall be salvaged in a timely manner. The applicant/owner/sponsor of said project shall be responsible for diverting project work and providing the assessment including retaining a professional paleontologist for

such purpose. Collected fossils shall be deposited by the applicant/owner/sponsor in an appropriate repository (e.g., University of California Museum of Paleontology (UCMP), California Academy of Sciences) where the collection shall be properly curated and made available for future research.

**Mitigation Measures for the Proposed Project**

None.

Environmental Issue Area	Housing Element Update FEIR Determination	Effect Peculiar to Project or Site?	New Significant Effect?	New Significant Off-site, Cumulative Impact?	New Information, More Severe Adverse Impact?
<b>VIII. Greenhouse Gas Emissions</b> <i>Would the project:</i>					
a) Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?	Less than significant impact	No	No	No	No
b) Conflict with any applicable plan, policy or regulation adopted for the purpose of reducing the emissions of greenhouse gases?	Less than significant impact	No	No	No	No

**a, b) Greenhouse Gas Emissions Generation and Greenhouse Gases Emissions Reduction Plan Conflicts**

Would the project: a) *Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?* or

b) *Conflict with any applicable plan, policy or regulation of an agency adopted for the purpose of reducing the emissions of greenhouse gases?*

**Summary of Housing Element Update FEIR**

*Greenhouse Gas Emissions Generation*

The Housing Element Update FEIR indicated that both construction and operation activities have the potential to generate greenhouse gas (GHG) emissions. Development consistent with the Housing Element Update would generate GHG emissions during temporary (short-term) construction activities such as site grading, operation of construction equipment, operation of on-site heavy-duty construction vehicles, hauling of materials to and from the future project sites, asphalt paving, and construction worker vehicle trips.

Long-term operational GHG emissions would result from project-generated vehicular traffic, utilization of any landscaping equipment, off-site generation of electrical power, use of energy required to convey water to and wastewater to the potential sites for housing, hauling and disposal of solid waste from the potential sites for housing, any fugitive refrigerants from air conditioning or refrigerators, and operation of any proposed stationary sources such as backup generators or fire pumps.

With respect to construction emission, the BAAQMD has not established thresholds of significance for GHG emissions resulting from construction activities at the plan level. Rather, the BAAQMD encourages the incorporation of Best Management Practices (BMPs) to reduce GHG emissions during construction. The BMPs recommended by the BAAQMD to reduce construction-related GHG emissions include maximizing the use of alternative fueled construction vehicles and equipment and local building materials as well as recycling or reusing construction and demolition waste to the maximum extent practicable; the General Plan and Municipal Code include policies and programs specifically designed to address GHG emissions during project construction activities.

With respect to operation, development consistent with the Housing Element Update is anticipated to result in 3.2 metric tons of carbon dioxide equivalent per capita per year (MT CO<sub>2</sub>e/yr), which would not exceed the City's reduction goal of meeting 4.1 MT CO<sub>2</sub>e per capita per year by 2030. This level of emission is consistent with BAAQMD's current GHG significance thresholds under Criterion A: meet the State's goals to reduce emissions to 40 percent below 1990 levels by 2030 and carbon neutrality by 2045.

#### *Greenhouse Gases Emissions Reduction Plan Conflicts*

The City's Climate Action Plan 2.0 (CAP 2.0) is considered a qualified GHG reduction strategy pursuant to State CEQA Guidelines Section 15183.5(b). Therefore, the Housing Element Update FEIR analyzed the Housing Element Update pursuant to BAAQMD's current GHG significance thresholds under Criterion B, be consistent with a local GHG reduction strategy that meets the criteria under State CEQA Guidelines Section 15183.5(b). Development projects where the City is the lead agency would need to show consistency with the BAAQMD's current GHG significance thresholds and/or incorporate mitigation to reduce impacts to less than the significant levels or, if they cannot demonstrate consistency with BAAQMD's recommended thresholds, demonstrate consistency with the CAP 2.0 (the local GHG reduction

strategy) by completing and submitting the CAP 2.0 CEQA GHG Emissions Analysis Compliance Checklist.

The Housing Element Update FEIR concluded that the Housing Element Update is consistent with the goals and policies of the CAP 2.0, as applicable, and would support the State's goals to reduce emissions by 40 percent below 1990 levels by 2030 and to achieve carbon neutrality by 2045, since the CAP 2.0 was adopted to support the achievement of those goals.

To ensure that future development projects consistent with the Housing Element Update would be consistent with the CAP 2.0, future projects would be required to individually demonstrate consistency with the CAP 2.0 as a part of the City's permitting process. The emissions anticipated to be generated by development consistent with the Housing Element Update would support the City's GHG reduction goals outlined in the CAP 2.0. As such, development consistent with the Housing Element Update would be consistent with the CAP 2.0 for purposes of analysis under the BAAQMD Thresholds of Significance. As such, impacts related to GHG emissions generation and potential conflicts with a plan, policy, or regulation that reduces emissions would be less than significant.

#### **Proposed Project Analysis and Conclusion**

The City of Pleasanton adopted an updated CAP 2.0 in February 2022, subsequent to the adoption of the General Plan EIR. The CAP 2.0 includes specific strategies and actions to reduce emissions to 4.11 MT CO<sub>2</sub>e per capita by 2030 (70 percent below 1990 levels) and provide substantial progress towards carbon neutrality by 2045. Pursuant to Section 15183.5 of the CEQA Guidelines, a lead agency may determine that a project's incremental contribution to a cumulative effect is not cumulatively considerable if the project complies with a previously adopted plan. The CAP 2.0 is considered a "qualified" GHG reduction strategy and provides CEQA streamlining for future development that are subject to discretionary review and trigger environmental review pursuant to the CEQA. Accordingly, a GHG Emission Compliance Checklist (Compliance Checklist) was prepared for the proposed project and is summarized below. The Compliance Checklist is included as Attachment 4 to the AQ/GHG Assessment (Appendix A).

As discussed in the AQ/GHG Assessment, the proposed project would include sufficient bicycle parking spaces in the proposed park and EV Ready components in each of the proposed single-family residences to satisfy PA 8 and PA 5, respectively, of the CAP 2.0. In addition, consistent with the CALGreen Code and Strategy BE-1, the proposed project would not include

natural gas infrastructure on-site. Furthermore, the proposed project would incorporate green stormwater infrastructure and water-efficiency measures to promote water conservation in compliance with Secondary Action 8 and PA 15 of the CAP 2.0, respectively. Because the proposed project is implementing all requirements discussed in the Compliance Checklist, the proposed project would be considered consistent with the City's CAP 2.0.

Based on the above, implementation of the proposed project would result in the emission of GHGs, but the proposed project would comply with the applicable measures included in the City's CAP 2.0, which would ensure that the proposed project would not generate GHG emissions, either directly or indirectly, that may have a significant impact on the environment, or conflict with an applicable plan, policy, or regulation adopted for the purpose of reducing the emissions of GHGs. Because the proposed project would not be considered to conflict with an applicable plan, policy, or regulation adopted for the purpose of reducing the emissions of GHGs, the proposed project would not result in any peculiar effects related to the generation of GHG emissions, and requirements for additional CEQA review are not met.

### **Conclusion**

With regards to Greenhouse Gas Emissions, the consistency checklist demonstrates that:

1. No peculiar impacts related to the proposed project or its site have been identified.
2. There are no potentially significant off-site and/or cumulative impacts which were not discussed by the Housing Element Update FEIR.
3. No substantial new information has been identified which results in an impact which is more severe than anticipated by the Housing Element Update FEIR.
4. No mitigation measures would be required because the proposed project's specific impacts would be less than significant.

### **Mitigation Measures**

None.

A Phase I Environmental Site Assessment (ESA) was prepared for the proposed project by ENGEO Incorporated (ENGEO) for the purpose of identifying potential recognized environmental conditions (RECs) associated with the project site (see Appendix F).<sup>13</sup> The Phase I ESA included a

<sup>13</sup> ENGEO Incorporated. *Phase I Environmental Site Assessment*. June 28, 2024.

reconnaissance of the site and review of regulatory agency database reports of public records for the site area, aerial photography, historic maps, and various other documentation. Sources reviewed as part of the Phase I ESA indicate that the project site was used for agricultural purposes by 1940, but such activity had ceased by 1979. According to the Phase I ESA, the project site appears in its existing condition starting in 1982 and the area was developed with the existing roadways between 1998 and 2006.

**a) Routine Transport, Use, or Disposal of Hazardous Materials**

Would the project: *Create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials?*

**Summary of Housing Element Update FEIR**

The Housing Element Update FEIR indicated that development consistent with the Housing Element Update would be expected to involve the transport, use, and disposal of hazardous materials, such as diesel fuels, aerosols, and paints. Hazardous materials, such as fuel or solvents, could accidentally spill, which could create hazards that could degrade groundwater quality or contaminate soils.

The Housing Element Update FEIR concluded that compliance with applicable federal, State, and local regulations regarding hazardous materials, including the Hazardous Materials Transportation Act, California Public Resources Code, and General Plan, would reduce and limit the associated risks. Similarly, any handling, transporting, use, or disposal of hazardous materials during demolition, construction or operation would comply with applicable laws, policies, and programs set forth by various federal, State, and local agencies and regulations, including, but not limited to, the EPA, Resource Conservation and Recovery Act (RCRA), Caltrans, the Local Hazard Mitigation Plan (LHMP), Title 22 and 26 of the California Code of Regulations governing hazardous materials transport, and Title 19 of the California Code of Regulations and Chapter 6.95 of the Health and Safety Code for site remediation. Therefore, the Housing Element Update FEIR concluded that impacts related to public hazard risk as a result of hazardous materials transport, use, or disposal during construction or operation would be less than significant.

**Proposed Project Analysis and Conclusion**

Residential uses are not typically associated with the routine transport, use, disposal, or generation of hazardous materials. Project operation would likely involve the use of common household cleaning products, fertilizers, and

herbicides on-site, any of which could contain potentially hazardous chemicals; however, such products would be expected to be used in accordance with label instructions. Due to the regulations governing use of such products and the amount that would be used on the site, occasional use of such products would not represent a substantial risk to public health or the environment during project operation. Therefore, impacts related to creating a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials were adequately addressed in the Housing Element Update FEIR, and the proposed project would not result in any effects that would require further CEQA review for this topic.

**b, d) Hazardous Materials Risk of Upset, Hazardous Materials Sites, and Government Code Section 65962.5 Sites**

- Would the project:
- b) Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment? or*
  - d) Be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment?*

**Summary of Housing Element Update FEIR**

The Housing Element Update FEIR indicated that future construction activities would have the potential to release potentially hazardous soils- and groundwater-based materials into the environment during site grading and excavation operations. However, development of the potential sites for rezoning is not expected to result in the transport, use, storage, or disposal of substantial amounts of hazardous materials, with the exception of common residential and commercial-grade hazardous materials such as household cleaners and paint, among others.

Several documented release sites are within 0.5-mile of the potential sites for rezoning (see Housing Element Update Draft EIR Table 3.8-1 and Exhibits 3.8-1a and 3.8-1b). In addition, it is noted that Site 22 (Merritt) is a currently inactive Department of Toxic Substances Control (DTSC) site but needs further evaluation regarding previously detected volatile organic chemicals (VOCs) and organochlorine pesticides in soil and groundwater.<sup>14</sup>

---

<sup>14</sup> California Department of Toxic Substances Control (DTSC). 2022. Response to Notice of Preparation of a Draft

Construction activities at these sites would likely involve ground-disturbing activities that could expose workers, the public, and the environment to contaminated soil and groundwater, if present.

The Housing Element Update FEIR concluded that compliance with applicable federal, State, and local laws, plans and regulations, including the General Plan, Vineyard Avenue Corridor Specific Plan, Titles 8 and 17 of the California Code of Regulations, California Division of Occupational Health and Safety (Cal/OSHA) requirements, as well as implementation of MM HAZ-2, which requires the preparation of a Phase I Environmental Site Assessment (Phase I ESA) and Phase II ESA (as necessary) and completion of any necessary remedial activities to be conducted under the oversight of the appropriate regulatory agency, would provide public protection from hazards associated with the use, transport, treatment, and disposal of hazardous substances during construction and operation of development consistent with the Housing Element Update. Therefore, impacts related to upset and accident conditions involving the release of hazardous materials into the environment would be less than significant with mitigation.

The Housing Element Update FEIR also indicated that several of the potential development sites are located near identified contamination sources that have not been fully remediated; in addition, several former hazardous waste sites that have been fully remediated exist near potential development sites (see Housing Element Update Draft EIR Table 3.8-1 and Exhibits 3.8-1a and 3.8-1b).

The Housing Element Update FEIR concluded that if a potential site for rezoning is suspected to contain hazardous materials, further site characterization and/or remediation work would be required to ensure that construction activities would not expose people or the environment to adverse effects, as required by MM HAZ-2. Therefore, with implementation of MM HAZ-2 and compliance with applicable federal, State, and local laws, as well as compliance with applicable plans and regulations, as enumerated in more detail in Section 3.8, Hazards and Hazardous Materials, in the Housing Element Update Draft EIR, impacts related to the creation of a hazard to the public or environment would be less than significant.

**Proposed Project Analysis and Conclusion**

The following discussion provides an analysis of potential hazards and hazardous materials associated with upset or accident conditions related to the proposed construction activities and existing on-site conditions. The analysis is primarily based on the Phase I ESA prepared for the proposed project by ENGEО.

*Construction Activities*

Construction activities associated with the proposed project would involve the use of various products such as concrete, paints, and adhesives. In addition, heavy-duty construction equipment would contain hydraulic fluid, diesel fuel, and other petroleum products. Small quantities of such potentially toxic substances would be used at the project site and transported to and from the site during construction. However, the project contractor would be required to comply with all California Health and Safety Codes and local County ordinances regulating the handling, storage, and transportation of hazardous and toxic materials.

Pursuant to California Health and Safety Code Section 25510(a), except as provided in subdivision (b), the handler or an employee, authorized representative, agent, or designee of a handler, shall, upon discovery, immediately report any release or threatened release of a hazardous material to the unified program agency (in the case of the proposed project, the Livermore-Pleasanton Fire Department [LPPFD]) in accordance with the regulations. The handler or an employee, authorized representative, agent, or designee of the handler shall provide all State, City, or County fire or public health or safety personnel and emergency response personnel with access to the handler's facilities. In the case of the proposed project, the contractor is required to notify the LPPFD in the event of an accidental release of a hazardous material, who would then monitor the conditions and recommend appropriate remediation measures.

*Existing On-Site Hazardous Conditions*

The purpose of the Phase I ESA was to review past and present land use practices and activities at and near the project site for evidence of RECs that could result in impacts to soil, soil vapor, surface water, and/or groundwater at, beneath, or originating from the project site. As part of the process, the Phase I ESA included review of historical documentation, aerial photography, regulatory agency files, environmental sites radius reports, and site reconnaissance. According to the American Society for Testing and Materials

(ASTM), RECs are defined as “the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property due to a release to the environment; under conditions indicative of a release to the environment or under conditions that pose a material threat of future release.”

The EPA provides a list of data resources that provide information regarding the facilities or sites identified as meeting the “Cortese List” requirements, pursuant to Government Code 65962.5. The project site is located on DTSC’s Hazardous Waste and Substances Site List, which is a component of the Cortese List.<sup>15</sup> However, the on-site entry is related to a school investigation associated with the existing site zoning and did not identify any contaminants of concern. Therefore, further action related to the listing is not required. The other components of the Cortese List include the list of leaking underground storage tank sites from the State Water Resources Control Board’s (SWRCB) GeoTracker database, the list of solid waste disposal sites identified by the SWRCB, and the list of active Cease and Desist Orders (CDOs) and Cleanup and Abatement Orders (CAOs) from the SWRCB. The project site is not located on any of the aforementioned components of the Cortese List.<sup>16</sup> Therefore, the project site is not anticipated to contain hazardous materials, and MM HAZ-2 would not apply.

In addition, the Phase I ESA prepared for the proposed project included a review of a prior Phase II ESA conducted for the project site in 2000. Because the project site had been used as grazing land and an orchard for decades, the Phase II ESA was conducted to assess the potential presence of residual organochlorine pesticides (OCPs), chlorinated herbicides, and metals within the project site. The scope of the Phase II ESA included drilling 13 borings to a total depth of six feet bgs and collection of samples at depths of 1.5, 3.5, and six feet bgs. According to the Phase I ESA prepared for the proposed project, the results of the previously conducted Phase II ESA indicated that on-site pesticides and herbicides were not detected above laboratory reporting limits.

Overall, RECs were not identified for the project site. Therefore, the proposed project would not result in any peculiar effects that would require further CEQA review related to creating a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions

---

<sup>15</sup> Department of Toxic Substances Control. *Hazardous Waste and Substances Site List (Cortese)*. Available at: <https://www.envirostor.dtsc.ca.gov/public/>. Accessed January 2025.

<sup>16</sup> California Environmental Protection Agency. *Cortese List Data Resources*. Available at: <https://calepa.ca.gov/sitecleanup/corteselist/>. Accessed November 2023.

involving the likely release of hazardous materials into the environment, or through being located on a site which is included on a list of hazardous materials compiled pursuant to Government Code Section 65962.5, and impacts were adequately addressed in the Housing Element Update FEIR.

**c) Hazardous Emissions Proximate to a School**

Would the project: *Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school?*

**Summary of Housing Element Update FEIR**

The Housing Element Update FEIR indicated that there are schools within 0.25-mile of the potential sites for rezoning. However, use of hazardous materials during construction and operation the sites would not result in the handling of significant quantities of hazardous materials, substances, or wastes and such uses are not generally associated with any releases that would adversely affect any schools located within a quarter mile of the potential sites for rezoning.

The Housing Element Update FEIR concluded that compliance with applicable local, State, and federal regulatory requirements related to the handling and storage of hazardous materials would ensure that the potential release of hazardous materials associated with development consistent with the Housing Element Update would be less than significant.

**Proposed Project Analysis and Conclusion**

The nearest existing school relative to the project site is Vintage Hills Elementary School, located approximately 1.35 miles west of the site. Therefore, the proposed project is not located within one-quarter mile from an existing school. In addition, as discussed above, residential uses are not typically associated with the routine transport, use, disposal, or generation of hazardous materials. Therefore, impacts related to hazardous emissions or the handling of hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school were adequately addressed in the Housing Element Update FEIR, and the proposed project would not result in any effects that would require further CEQA review for this topic.

**e) Proximity to Public Airport Safety Hazard**

Would the project: *For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport*

*or public use airport, would the project result in a safety hazard or excessive noise for people residing or working in the project area?*

**Summary of Housing Element Update FEIR**

The Housing Element Update FEIR indicated that Sites 12 (Pimlico Area), 14 (St. Elizabeth Seton), 15 (Rheem Drive Area), and 21a and 21b (Kiewit) are within the Alameda County Airport Land Use Policy Plan (ALUPP) Airport Influence Area (AIA) for the Livermore Municipal Airport, which is coterminous with the Alameda County Airport Land Use Commission Hazard Prevention Zone, but that none of the potential sites for rezoning are within an Airport Protection Area (See Exhibit 3.8-2 of the Housing Element Update Draft EIR).

The Housing Element Update FEIR concluded that compliance with federal, State, and local regulations including the General Plan, Alameda County Airport Land Use Policy Plan Airport Influence Area, 2011 California Airport Land Use Planning Handbook, Code of Federal Regulations Part 77, and Federal Aviation Administration regulations would ensure that impacts related to exposure of people to safety hazards or excessive noise in proximity to an airport would be less than significant.

**Proposed Project Analysis and Conclusion**

The public airport nearest to the project site is the Livermore Municipal Airport, which is located approximately 2.4 miles north of the project site. The project site is not located within the vicinity of a private airstrip. Therefore, the proposed project would not result in an airport-related safety hazard for people residing or working in the project area, and impacts were adequately addressed in the Housing Element Update FEIR.

**f) Emergency Response and Evacuation**

Would the project: *Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?*

**Summary of Housing Element Update FEIR**

The Housing Element Update FEIR indicated that construction equipment and vehicles operated in support of development consistent with the Housing Element Update could potentially impede evacuation or emergency vehicle access. However, construction vehicles would comply with the Tri-Valley LHMP and the Comprehensive Emergency Management Plan, ensuring efficient response to emergency incidents associated with emergencies affecting the City. Therefore, construction impacts related to emergency response and evacuation would be less than significant.

The Housing Element Update FEIR concluded that, with adherence to the procedures of the Tri-Valley LHMP and the Comprehensive Emergency Management Plan, development consistent with the Housing Element Update would not conflict with an adopted emergency response plan. In addition, development consistent with the Housing Element Update would comply with applicable plans and regulations including the Alameda County Disaster Plan and General Plan goals. Compliance with existing applicable local, State, and federal regulatory requirements related to emergency response and evacuation and policies would ensure consistency with emergency preparedness plans and ensure impacts would be less than significant.

#### **Proposed Project Analysis and Conclusion**

Development of the proposed project would not result in any substantial modifications to the City's existing roadway system. The project would not interfere with potential evacuation or response routes used by emergency response teams. In addition, development of the proposed project would not conflict with the City's Emergency Operations Plan. Given that the proposed project would be consistent with the type of residential development anticipated for the site by the City, buildout of the project site with the proposed uses would not conflict with the City's emergency planning efforts. Therefore, impacts related to interfering with an emergency evacuation or response plan were adequately addressed in the Housing Element Update FEIR, and the proposed project would not result in any effects that would require further CEQA review for this topic.

#### **g) Wildland Fires**

Would the project: *Expose people or structures, either directly or indirectly to a significant risk of loss, injury or death involving wildland fires?*

#### **Summary of Housing Element Update FEIR**

The Housing Element Update FEIR indicated that several of the potential sites for rezoning are within Fire Hazard Severity Zones (FHSZ):<sup>17</sup>

- Site 1 (Lester) – the entire site is within a High FHSZ State Responsibility Area (SRA)
- Site 2 (Stoneridge Mall) – a small area in the southwestern portion is located within a moderate and High FHSZ Local Responsibility Area (LRA)

---

<sup>17</sup> California Department of Forestry and Fire Protection (CAL FIRE). 2022. CAL FIRE Fire and Resource Assessment Program (FRAP) Fire Hazard Severity Map. Website: <https://frap.fire.ca.gov/>. Accessed: July 7, 2022.

- Site 21a and 21b (Kiewit) – the land to the north is designated as a moderate FHSZ LRA
- Site 22 (Merritt) – the southern portion is within a moderate FHSZ with the easternmost portion of the site mapped as a Very High FHSZ SRA
- Site 23 (Sunol Boulevard) is within a high FHSZ LRA to the west
- Site 26 (St. Augustine) – most of the site is within a moderate FHSZ LRA
- Site 27 (PUSD-Vineyard) is within a high FHSZ LRA

While most of the sites are not within FHSZs, development consistent with the Housing Element Update could result in additional residential and commercial development on the potential sites for rezoning, some of which could occur in areas within or adjacent to lands mapped within SRA or LRA FHSZs. As such, development consistent with the Housing Element Update could expose people or structures, either directly or indirectly, to a risk of loss, injury, or death involving wildland fires.

The Housing Element Update FEIR concluded that future projects would be required to comply with fire protection measures included in the policies and programs within the General Plan and the Municipal Code. Further, continued implementation of the Tri-Valley LHMP and review of architectural and development plans by the LPFD would assist in protecting life and property in the event of a wildfire. Compliance with existing applicable local, State, and federal regulatory requirements would ensure that impacts associated with wildland fires would be less than significant.

#### **Proposed Project Analysis and Conclusion**

According to the California Department of Forestry and Fire Protection (CALFIRE) Fire and Resource Assessment Program, the project site is not located within an SRA or a Very High FHSZ.<sup>18</sup> As discussed above, the project site is within a High FHSZ LRA. The proposed project would be required to comply with all applicable requirements of the California Fire Code, as adopted by Chapter 20.24 of the City's Municipal Code, including installation of fire sprinkler systems. The project is not located on a substantial slope, and the project area does not include any existing features that would substantially increase fire risk for future residents, workers, or visitors. Given that the project site is located within a developed urban area and is situated adjacent to existing roads, water lines, and other utilities, the project would not result in substantial fire risks related to installation or maintenance of such infrastructure.

---

<sup>18</sup> California Department of Forestry and Fire Protection. *Fire Hazard Severity Zone Viewer*. Available at: <https://egis.fire.ca.gov/FHSZ/>. Accessed January 2025.

Based on the above, impacts related to wildfire risks were adequately addressed in the Housing Element Update FEIR, and the site would not be subject to any peculiar hazards related to the exposure of people or structures, either directly or indirectly, to the risk of loss, injury, or death involving wildland fires.

## **Conclusion**

With regards to Hazards and Hazardous Materials, the consistency checklist demonstrates that:

1. No peculiar impacts related to the proposed project or its site have been identified.
2. There are no potentially significant off-site and/or cumulative impacts which were not discussed by the Housing Element Update FEIR.
3. No substantial new information has been identified which results in an impact which is more severe than anticipated by the Housing Element Update FEIR.
4. No mitigation measures from the Housing Element Update FEIR would be required because the proposed project's specific impacts would be less than significant.

## **Mitigation Measures**

### **Housing Element Update FEIR Mitigation Measures**

#### **MM HAZ-2 Environmental Site Assessment**

If a potential site for rezoning is suspected to contain hazardous materials, prior to building permits, the City shall ensure that each project applicant retain a qualified environmental consulting firm to prepare a Phase I Environmental Site Assessment (Phase I ESA) in accordance with the American Society for Testing and Materials (ASTM) Standards in effect at the time of request of issuance of building permits, which would ensure the City is aware of any hazardous materials on-site. The Phase I ESA shall determine the presence of recognized environmental conditions and provide recommendation for further investigation (e.g., preparation of a Phase II ESA, if applicable). Prior to receiving a building or grading permit, project applicants shall provide documentation from the overseeing agency (e.g., Alameda County Environmental Health [ACEH] or Regional Water Quality Control Board) that

sites with identified contamination have been remediated to levels where no threat to human health or the environmental remains for the proposed uses.

**Mitigation Measures for the Proposed Project**

None.

Environmental Issue Area	Housing Element Update FEIR Determination	Effect Peculiar to Project or Site?	New Significant Effect?	New Significant Off-site, Cumulative Impact?	New Information, More Severe Adverse Impact?

Environmental Issue Area	Housing Element Update FEIR Determination	Effect Peculiar to Project or Site?	New Significant Effect?	New Significant Off-site, Cumulative Impact?	New Information, More Severe Adverse Impact?
(ii) substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or off-site;	Less than significant impact	No	No	No	No
(iii) create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff; or	Less than significant impact	No	No	No	No
(iv) impede or redirect flood flows?	Less than significant impact	No	No	No	No
d) In flood hazard, tsunami, or seiche zones, risk release of pollutants due to project inundation?	Less than significant impact	No	No	No	No
e) Conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan?	Less than significant impact	No	No	No	No

**a) Surface and Groundwater Quality**

Would the project: *Violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or ground water quality?*

**Summary of Housing Element Update FEIR**

The Housing Element Update FEIR indicated that future development consistent with the Housing Element Update would involve grading, excavation, and removal of vegetative cover that has the potential to result in runoff that contains sediment and other pollutants that could degrade surface and groundwater quality if not properly controlled. Furthermore, all future development consistent with the Housing Element Update could add additional areas of impervious surfaces within the City and could therefore increase the volume of pollutants that are typically associated with urban runoff into the stormwater.

The Housing Element Update FEIR concluded that compliance with mandatory NPDES permit requirements, adherence to the Municipal Code, and implementation of General Plan goals, policies, and actions would ensure that impacts related to water quality degradation from construction activities would be less than significant.

Operation of future development consistent with the Housing Element Update would be required to comply with regulations enforced by the RWQCB. In addition to existing State regulations, future projects would also be required to comply with requirements of the Municipal Code and policies and actions included in the General Plan related to water quality. Therefore, during operation, future development consistent with the Housing Element Update would not violate any water quality standards or Waste Discharge Requirements (WDR) or otherwise substantially degrade surface or groundwater quality and impacts would be less than significant.

**Proposed Project Analysis and Conclusion**

Construction activities, such as grading, excavation, import of fill, and trenching for site improvements, would result in the disturbance of on-site soils. The exposed soils have the potential to affect water quality in two ways: 1) suspended soil particles and sediments transported through runoff; or 2) sediments transported as dust that eventually reach local water bodies. Spills or leaks from heavy equipment and machinery, staging areas, or building sites also have the potential to enter runoff. Typical pollutants include, but are not limited to, petroleum and heavy metals from equipment and products such as paints, solvents, and cleaning agents, which could contain

hazardous constituents. Sediment from erosion of graded or excavated surface materials, leaks or spills from equipment, or inadvertent releases of building products could result in water quality degradation if runoff containing the sediment or contaminants should enter receiving waters in sufficient quantities. Impacts from construction-related activities would generally be short-term.

Water quality degradation is regulated by the federal NPDES Program, established by the Clean Water Act, which controls and reduces pollutants to water bodies from point and non-point discharges. In California, the NPDES permitting program is administered by the SWRCB. New development within the City that disturbs one or more acres of land is required to comply with the NPDES Construction General Permit and prepare a SWPPP incorporating BMPs to control sedimentation, erosion, and hazardous materials contamination of runoff during construction. The proposed project would disturb approximately 10.64 acres, and, thus, would be subject to the State NPDES General Permit conditions.

Compliance with the SWRCB NPDES General Construction Permit through preparation of a SWPPP that specifies site management activities to be implemented during site development, such as construction stormwater BMPs, erosion and sedimentation controls, dewatering, runoff controls, and construction equipment maintenance, would ensure that construction of the proposed project would not violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or groundwater quality during construction.

After project construction, impervious surfaces on the project site could contribute incrementally to the degradation of downstream water quality during storm events. During the dry season, vehicles and other urban activities may release contaminants onto the impervious surfaces, where they would accumulate until the first storm event. During the initial storm event, or first flush, the concentrated pollutants would be transported through stormwater runoff from the site to the stormwater drainage system for treatment and eventually a downstream waterway. Typical urban pollutants that would likely be associated with the proposed project include sediment, pesticides, oil and grease, nutrients, metals, bacteria, and trash. In addition, stormwater runoff could cause soil erosion if not properly addressed and provide a more lucrative means of transport for pollutants to enter the waterways.

The Alameda Countywide Clean Water Program, a consortium of 17 regulatory agencies and local governments, including the City of Pleasanton, is permitted for municipal stormwater discharge under a Municipal NPDES permit. Compliance with permit conditions includes new development and redevelopment performance standards, project development review for incorporation of stormwater BMPs to the maximum extent practicable, numeric sizing criteria for structural treatment devices, operations and maintenance of treatment measures, and limitations on increases in peak stormwater runoff discharge rates. Compliance with such is codified in Chapter 9.14, Stormwater Management and Discharge Control, of the City's Municipal Code.

As shown in the Preliminary Stormwater Treatment Plan prepared for the proposed project (see Exhibit 9), the project site would be divided into two DMAs, which generally comprise the single-family residential development area (DMA 1) and the proposed park area (DMA 2). As shown in Exhibit 9, stormwater runoff from the on-site impervious surfaces within DMA 1 would be directed through a network of 10- to 18-inch storm drain lines to the proposed on-site bioretention basin at the northern site boundary. The treated on-site stormwater would ultimately be routed to the existing 24-inch storm drain line within Vineyard Avenue. DMA 2 would be self-retaining, with collected stormwater allowed to pond up to three inches before flowing into the City's existing storm drainage system.

The final design of the proposed drainage system would be reviewed and approved by the City of Pleasanton, which would ensure that the proposed drainage system complies with all applicable regional and local standards, including those set forth in City's Municipal Code, as well as requirements pertaining to the incorporation of sufficient permanent stormwater treatment control BMPs. Therefore, water quality standards or waste discharge requirements would not be violated, and downstream water quality would not be degraded as a result of operations of the proposed project.

Based on the above, impacts related to water quality standards were adequately addressed in the Housing Element Update FEIR, and the proposed project would not result in any effects that would require further CEQA review for this topic.

**b, e) Groundwater and Water Quality Control or Sustainable Groundwater Management Plans Consistency**

- Would the project:
- b) *Substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the project may impede sustainable groundwater management of the basin? or*
  - e) *Conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan?*

**Summary of Housing Element Update FEIR**

The Housing Element Update FEIR indicated that future development consistent with the Housing Element Update could increase the area of impervious surfaces, which could potentially reduce groundwater infiltration. The addition of new housing would also result in an increase in residential connections to the municipal water supply, which could potentially increase demand on groundwater supplies.

The Housing Element Update FEIR concluded that future development consistent with the Housing Element Update would be required to comply with requirements of the Municipal Code and General Plan policies and actions related to maximizing infiltration and rainwater retention and requiring the identification of an adequate water supply. Therefore, future development consistent with the Housing Element Update would not substantially interfere with groundwater recharge or impede groundwater management of the basin, and impacts would be less than significant.

The Housing Element Update FEIR also indicated that construction and operation of any future development consistent with the Housing Element Update could result in water quality impacts. In addition, future development consistent with the Housing Element Update could lead to an increased demand for water, which could lead to an increase in groundwater pumping.

The Housing Element Update FEIR concluded that any future development consistent with the Housing Element Update would be required to comply with the General Plan policies and programs, the Municipal Code, and the mandatory NPDES permit requirements. Therefore, during construction and operation, future development consistent with the Housing Element Update would not violate any water quality standards or otherwise substantially degrade surface or groundwater quality, in compliance with the Water Quality Control Plan for the San Francisco Bay Basin. Furthermore,

compliance the General Plan contains policies and programs that would facilitate groundwater recharge by encouraging pervious surfaces in new developments and requiring projects to meet federal, State, regional, and local stormwater requirements, including stormwater infiltration. Therefore, implementation of the Housing Element Update would not conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan and impacts would be less than significant.

#### **Proposed Project Analysis and Conclusion**

Water supplies for the City are managed by Zone 7 of the Alameda County Flood Control and Water Conservation District (Zone 7 Water Agency). Approximately 75 percent of the water supplied by the Zone 7 Water Agency acquires more than 80 percent of its raw water supply from the California State Water Project (SWP), a multi-purpose water storage and delivery system comprised of canals, pipelines, reservoirs, and hydroelectric power facilities that extends more than 705 miles. SWP surface water is treated at the Patterson Pass Water Treatment Plant (PPWTP) and the Del Valle Water Treatment Plant (DVWTP) and is conveyed through a network of Zone 7 Water Agency transmission pipelines to the City's service areas and other retail customers.

Although the proposed project would have the potential to result in an increase in population, the proposed project would be consistent with the type of residential development anticipated for the project site by the City. Therefore, the potential increase in water demand has been accommodated for within the previous analysis. In addition, the project site represents a relatively small area compared to the overall surface area of the San Francisco Bay Basin. Runoff from the proposed impervious surfaces would be directed to the on-site stormwater drainage management facilities and ultimately into the City's storm drain system. At both locations, runoff water would percolate and recharge the San Francisco Bay Basin. Therefore, any new impervious surfaces associated with the proposed project would not interfere substantially with groundwater recharge within the San Francisco Bay Basin.

As discussed in further detail in Section XVIII, Utilities and Service Systems, the proposed project would not result in substantial adverse effects related to groundwater use or water supply. Thus, impacts related to substantially decreasing groundwater supplies or interfering substantially with groundwater recharge were adequately addressed in the Housing Element

Update FEIR, and the proposed project would not result in any effects that would require further CEQA review for this topic.

**c) Drainage Leading to Erosion/Siltation, Flooding, Additional Sources of Polluted Runoff, or Impedance of Flood Flows**

Would the project: *Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, in a manner which would:*

- *result in substantial erosion or siltation on- or off-site;*
- *substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or off-site; or*
- *create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff.*

**Summary of Housing Element Update FEIR**

The Housing Element Update FEIR indicated that future development consistent with the Housing Element Update would involve construction activities such as stockpiling, grading, excavation, paving, and other earth-disturbing activities. Loose and disturbed soils are more prone to erosion and loss of topsoil by wind and water. This could result in an increase in stormwater runoff and the potential to cause erosion or sedimentation in drainage swales and creeks.

The Housing Element Update FEIR concluded that compliance with the NPDES and SWPPP requirements and the policies and actions included in the General Plan would ensure impacts related to erosion and siltation would be less than significant.

The Housing Element Update FEIR indicated that future development consistent with the Housing Element Update could increase the total impervious area within the City and increase stormwater runoff, which could result in flooding.

The Housing Element Update FEIR concluded that compliance with existing regulations, the policies and actions included in the General Plan, and adherence to the Municipal Code would maximize infiltration and rainwater retention, which would in turn reduce stormwater runoff. Additionally, all future development consistent with the Housing Element Update would be evaluated on a project-by-project basis to ensure that there are no significant impacts related to surface runoff and flooding. Further, new

development would be required to pay its fair share of the flood control improvement costs. Therefore, impacts related to surface water and flooding would be less than significant.

The Housing Element Update FEIR indicated that new development consistent with the Housing Element Update could increase the total impervious area and increase stormwater runoff, which could exceed stormwater drainage facility capacity or create additional sources of polluted runoff.

The Housing Element Update FEIR concluded that compliance with the General Plan policies and programs would maximize infiltration and rainwater retention, which would in turn reduce stormwater runoff. Additionally, all future development consistent with the Housing Element Update would be evaluated on a project-by-project basis for impacts to storm drain capacity. Further, new development would be required to pay its fair share of the storm drainage system improvement costs. Therefore, impacts related to exceedances in stormwater drainage systems or the creation of substantial additional sources of polluted runoff would be less than significant.

#### **Proposed Project Analysis and Conclusion**

During the early stages of construction activities, topsoil would be exposed due to grading and excavation of the site. Prior to overlaying the ground with impervious surfaces and structures, the potential exists for wind and water to transport sediment and/or urban pollutants into stormwater runoff, which could adversely affect water quality.

The SWRCB regulates stormwater discharges associated with construction activities where clearing, grading, or excavation results in land disturbance of one or more acres. The City's NPDES permit requires applicants to show proof of coverage under the State's Construction General Permit prior to receipt of any construction permits. The State's Construction General Permit requires a SWPPP to be prepared for the site. A SWPPP describes BMPs to control or minimize pollutants from entering existing waters through stormwater flows, and must address both grading and erosion impacts, as well as non-point source pollution impacts. Because the proposed project would disturb an area of land greater than one acre, the proposed project would be subject to the requirements of the State's Construction General Permit and, with implementation of the required SWPPP and BMPs included therein, the proposed project would not result in a violation of water quality standards and/or degradation of water quality. Furthermore, the proposed project would be required to comply with Chapter 9.14, Stormwater Management

and Discharge Control, of the City's Municipal Code. Based on the required submittal and approval of a SWPPP, the proposed project would not violate water quality standards or waste discharge requirements or otherwise substantially degrade surface or groundwater quality during construction.

Following completion of project buildout, the site would be largely covered with impervious surfaces and landscaped areas, and topsoil would not be exposed. As such, the potential for on-site erosion and the associated impacts to water quality would be reduced. However, the addition of impervious surfaces would result in the generation of urban runoff during project operations, which could contain pollutants if the runoff encounters vehicle fluids on parking surfaces and/or landscape fertilizers and herbicides.

The City of Pleasanton has adopted the Alameda Countywide Clean Water Program C.3 Stormwater Technical Guidance, which requires new development projects that create or alter 10,000 sf or more of impervious area to contain and treat all stormwater runoff from the project site. The proposed project would create 228,835 sf of new impervious area. Therefore, the proposed project would be subject to the C.3 stormwater standards, as well as the requirements of the SWRCB and the RWQCB included in the City's NPDES General Permit. Compliance with such requirements would ensure that impacts to water quality standards or waste discharge requirements would not occur during operation of the proposed project.

Based on the above, impacts related to substantially altering the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, in a manner which would result in substantial erosion, siltation, or flooding on- or off-site, create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems, or provide substantial additional sources of polluted runoff, were adequately addressed in the Housing Element Update FEIR, and the proposed project would not result in any effects that would require further CEQA review for this topic.

**c) Drainage Leading to Erosion/Siltation, Flooding, Additional Sources of Polluted Runoff, or Impedance of Flood Flows**

Would the project: *Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, in a manner which would impede or redirect flood flows?*

**Summary of Housing Element Update FEIR**

As depicted in the Housing Element Update Draft EIR in Exhibit 3.9-1, most of the potential sites for rezoning are not located within a flood hazard zone.

A small portion of the eastern portion of Site 22 (Merritt) and a small portion of the northern portion of Site 29 (Oracle) is located within the 100-year flood hazard zone.

Site 3 (PUSD-Donlon), Site 4 (Owens, Motel 6, and Tommy T), Site 5 (Laborer Council), Site 6 (Signature Center), the southwestern portion of Site 7 (Hacienda Terrace), and the eastern portion of Sites 22 (Merritt) and western portion of Site 29 (Oracle) are within the 500-year Federal Emergency Management Agency (FEMA) flood hazard zone.

The Housing Element Update FEIR concluded that development consistent with the Housing Element Update would be subject to the General Plan policies and programs and Municipal Code, and compliance with those regulation would reduce the risks of flooding. Furthermore, federal and State agencies are also responsible for maintaining flood protection features in the City. Additionally, all future development consistent with the Housing Element Update would be evaluated on a project-by-project basis for impacts related to flooding and would mitigate impacts as appropriate. Therefore, the potential for loss, injury, or death from impeding flood flows would be less than significant.

**Proposed Project Analysis and Conclusion**

The project site is located within Zone X, which is not a Special Flood Hazard Area (SFHA).<sup>19</sup> Thus, given compliance with the general provisions established in Chapter 17.08 of the City's Municipal Code, as well as with all applicable federal, State, and local regulations, the proposed project would not result in adverse impacts related to flooding. Therefore, impacts related to impeding or redirecting flood flows were adequately addressed in the Housing Element Update FEIR and the proposed project would not result in any effects that would require further CEQA review for this topic.

**d) Risk of Pollutant Release Due to Inundation**

Would the project: *In flood hazard, tsunami, or seiche zones, risk release of pollutants due to project inundation?*

---

<sup>19</sup> Federal Emergency Management Agency. *National Flood Hazard Layer (NFHL) Viewer*. Available at: <https://hazards-fema.maps.arcgis.com/apps/webappviewer/index.html>. Accessed December 2024.

### **Summary of Housing Element Update FEIR**

The Housing Element Update FEIR indicated there are no large, confined water bodies within the City susceptible to seiches and that no portion of the City is located on a shoreline susceptible to tsunamis. Therefore, development consistent with the Housing Element Update would not result in substantial inundation by seiche or tsunami, and no impact would occur related to a release of pollutants due to related inundation.

The Housing Element Update FEIR indicated that several potential sites for rezoning are within the 500-year flood hazard zone, and small portions of Sites 22 (Merritt) and Site 29 (Oracle) are located within the 100-year flood hazard zone (see Housing Element Update Draft EIR Exhibit 3.9 1). Development consistent with the Housing Element Update would be subject to the General Plan policies and programs and the Municipal Code, which would reduce the risks of inundation. Additionally, all future development would be evaluated on a project-by-project basis for impacts related to risk of pollutant release associated with flooding and inundation. Therefore, the risk of release of pollutants during inundation would be less than significant.

### **Proposed Project Analysis and Conclusion**

Given that the project site is not located in the proximity of a shoreline or a closed body of water, the proposed project would not be subject to adverse impacts related to tsunami or seiche zones. Therefore, impacts related to flooding were adequately addressed in the Housing Element Update FEIR, and the proposed project would not result in any effects that would require further CEQA review for this topic.

### **Conclusion**

With regards to Hydrology and Water Quality, the consistency checklist demonstrates that:

1. No peculiar impacts related to the proposed project or its site have been identified.
2. There are no potentially significant off-site and/or cumulative impacts which were not discussed by the Housing Element Update FEIR.
3. No substantial new information has been identified which results in an impact which is more severe than anticipated by the Housing Element Update FEIR.
4. No mitigation measures would be required because the proposed project's specific impacts would be less than significant.

## Mitigation Measures

None.

Environmental Issue Area	Housing Element Update FEIR Determination	Effect Peculiar to Project or Site?	New Significant Effect?	New Significant Off-site, Cumulative Impact?	New Information, More Severe Adverse Impact?
<b>XI. Land Use and Planning</b> <i>Would the project:</i>					
a) Physically divide an established community?	Less than significant impact	No	No	No	No
b) Cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect?	Less than significant impact	No	No	No	No

**a) Division of an Established Community**

Would the project: *Physically divide an established community?*

**Summary of Housing Element Update FEIR**

The Housing Element Update FEIR indicated the physical division of an established community could potentially occur if development consistent with the Housing Element Update would involve construction of a large linear feature, such as a railroad or interstate highway, or if it would involve removal of access that would impact mobility within an existing community, such as removal of a bridge.

The potential sites for rezoning were chosen by the City based on certain criteria that make the sites suitable for residential development. These criteria include: (1) site size and infill criteria, (2) proximity to modes of transportation, (3) proximity to services and amenities, (4) environmental impacts/hazards, (5) impacts on sensitive resources, (6) height and mass combustibility, and (7) owner interest in development of the site. As part of this analysis, the City determined potential sites for rezoning that would allow housing developments on locations that would be integrated into, and would not divide, any established neighborhoods within the City. The Housing Element

Update contains a multitude of policies and actions to require and ensure community connectivity as buildout occurs.

Therefore, the Housing Element Update FEIR concluded the Housing Element Update does not propose any changes to the roadway circulation network such that new or expanded roadways are contemplated. For these reasons, impacts would be less than significant.

### **Proposed Project Analysis and Conclusion**

As discussed above, a project risks dividing an established community if the project would introduce infrastructure or alter land use so as to change the land use conditions in the surrounding community or isolate an existing land use. The proposed project would include the development of 27 single-family residences and 27 ADUs, which would be consistent with the type of development anticipated for the project site by the City, as well as with the existing development surrounding the project site. Therefore, the proposed project would represent a continuation of the surrounding development and would not isolate an existing land use. Overall, impacts related to physically dividing an established community were adequately addressed in the Housing Element Update FEIR, and the proposed project would not result in any peculiar effects that would require further CEQA review related to such.

### **b) Conflict with Applicable Land Use Plans, Policies, or Regulations**

Would the project: *Cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect?*

### **Summary of Housing Element Update FEIR**

*Plan Bay Area 2050-Sustainable Communities Strategy/Regional Transportation Plan Consistency*

The Housing Element Update FEIR indicated that, consistent with Plan Bay Area 2050, the Housing Element Update includes several policies and programs intended to improve the quality of the housing inventory, conserve existing neighborhoods, increase housing affordability, and remove potential governmental and non-governmental constraints to housing for lower-income households and persons with special needs. Individual development projects would also be subject to relevant Housing Element Policies and Municipal Code requirements regarding growth management to ensure that residential development is consistent with the City's infrastructure capacity.

Furthermore, the potential sites for rezoning were determined through a site evaluation performed by the City, based on seven different criteria that considered the 35 strategies set forth in Plan Bay Area 2050. These criteria include the following: (1) site size and infill criteria, (2) proximity to modes of transportation, (3) proximity to services and amenities, (4) environmental impacts/hazards, (5) impacts on sensitive resources, (6) height and mass compatibility, and (7) interest in site.

The sites that were chosen to promote infill development in areas with proximity to existing transit and services and amenities. Consistency with the Regional Housing Needs Allocation (RHNA) and a focus on concentrating future housing development in these areas would reduce environmental impacts, consistent with Plan Bay Area 2050. Therefore, impacts would be less than significant.

*City of Pleasanton General Plan, PUD, and Specific Plan Consistency*

The Housing Element FEIR notes that development on most of the potential sites for rezoning would require a General Plan Amendment. Development within Hacienda on Site 5 (Laborers Council), Site 7 (Hacienda Terrace), Site 8 (Muslim Community Center), Site 9 (Metro 580), and Site 29 (Oracle), could also require an Amendment of the Hacienda PUD Plan. Development of Site 27 (PUSD Vineyard) could also require amendment of the Vineyard Avenue Corridor Specific Plan.

The proposed PUD, and Specific Plan Amendments would be consistent with widely accepted planning principles of facilitating logical and orderly growth, ensuring compatibility with surrounding uses, and ensuring internal consistency among the goals and policies of the General Plan, Hacienda PUD Plan, and Vineyard Avenue Corridor Specific Plan. As the City receives development applications for subsequent development consistent with the Housing Element Update, those applications would be reviewed by the City for compliance with the goals, policies, and programs of the General Plan and Hacienda PUD Plan and Vineyard Avenue Corridor Specific Plan, as applicable. As such, if approved, the proposed PUD, and Specific Plan Amendments would serve as a self-mitigating aspect of the Housing Element Update that would correct conflicts that would otherwise exist, and impacts would be less than significant.

*Zoning*

The Housing Element Update includes policies and programs that are meant to ensure logical and orderly development and require discretionary review

consistent with the Pleasanton Zoning Ordinance. Moreover, as the City receives development applications for subsequent development consistent with the Housing Element Update, those applications would be reviewed by the City for compliance with the goals, policies, and programs of the Municipal Code. As such, if approved, the proposed rezonings would serve as a self-mitigating aspect of the project that would serve to correct conflicts that would otherwise exist, and impacts would be less than significant.

#### *Annexation*

All the potential sites for housing are located within the incorporated area, except for Site 1 (Lester) and Site 22 (Merritt). Site 22 (Merritt) is just outside of the city limits, but within Pleasanton's SOI and Urban Growth Boundary (UGB). Site 1 (Lester) is also located just outside of the city limits, and its western half is located just outside the UGB (see Exhibit 2-2 in the Housing Element Update Draft EIR). Prior to development on those sites, they would need to be annexed into the City of Pleasanton consistent with City and LAFCo policies as well as Program 1.10 of the Housing Element. Annexation of these two properties would represent a logical and orderly extension of urban growth and the City's boundaries which would ensure the two properties would be developed in a comprehensive and thoughtful manner consistent with other nearby lands. Moreover, as the City receives development applications consistent with the Housing Element Update for these two sites, those applications would be reviewed by the City for compliance with the goals, policies, and programs of the General Plan and Municipal Code. Furthermore, LAFCo would review the development applications for these sites to ensure consistency with LAFCo policies, and impacts would be less than significant.

#### *Urban Growth Boundary (Measure FF)*

All the potential sites for housing are within the Urban Growth Boundary apart from western half of Site 1 (Lester), and no development would be allowed on the portion of that site outside of the UGB. Therefore, impacts would be less than significant.

#### *City of Pleasanton Measures PP and QQ*

The Housing Element Update FEIR indicated that, consistent with General Plan, individual development projects would be required to undergo project-specific discretionary environmental review with respect to annexation and development in the City of Pleasanton, including additional analysis to determine consistency with Measure PP. Therefore, development consistent

with the Housing Element Update would not conflict with Measures PP or QQ, and impacts would be less than significant.

*Airport Land Use Compatibility Plan*

The Housing Element Update FEIR indicated the Livermore Municipal Airport is located approximately 1 mile east of the City of Pleasanton, and some areas of the City are within the flight path for planes taking off and arriving at the Livermore Airport. As shown in Exhibit 3.8-2 in the Housing Element Update Draft EIR, Site 12 (Pimlico Area, North side), Site 14 (St. Elizabeth Seton), Site 15 (Rheem Drive Area, southwest side), Site 21a and 21b (Kiewit) are located within the Alameda County ALUPP AIA, which is coterminous with the Alameda County Airport Land Use Commission Hazard Prevention Zone. None of the potential sites for housing are within an Airport Protection Area.

Developments within the ALUPP's AIA would be required to undergo federal, State, and local regulatory review processes specific to airport noise, airspace safety, and other land use compatibility standards, including 14 Code of Federal Regulations Part 77 regulations for the safety, efficient use, and preservation of navigable airspaces. In reviewing individual applications, The City would determine which policies and actions apply and whether project modifications would be required to ensure compatibility with the Airport Land Use Compatibility Plan (ALUCP). Buildings within the ALUCP AIA would be required to comply with Federal Aviation Administration (FAA) regulations for height. Therefore, development consistent with the Housing Element Update would be consistent with the Alameda County ALUCP and impacts would be less than significant.

**Proposed Project Analysis and Conclusion**

As discussed throughout this Consistency Checklist, the proposed project would be consistent with the type of residential development anticipated for the site by the City. In addition, as demonstrated by this Checklist, the proposed project would not result in any new significant environmental effects that were not previously identified in the Housing Element Update FEIR and could not be substantially mitigated by uniformly applicable development policies and standards, pursuant to CEQA Guidelines Section 15183. The proposed project would not conflict with City policies and regulations adopted for the purpose of avoiding or mitigating an environmental effect, including, but not limited to, the City's noise standards, applicable regulations related to stormwater, and development standards included in the Pleasanton Municipal Code. Therefore, the proposed project would not cause a significant environmental impact in excess of what has

already been analyzed and anticipated in the Housing Element Update FEIR, and would not conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental impact.

### **Conclusion**

With regards to Land Use and Planning, the consistency checklist demonstrates that:

1. No peculiar impacts related to the proposed project or its site have been identified.
2. There are no potentially significant off-site and/or cumulative impacts which were not discussed by the Housing Element Update FEIR.
3. No substantial new information has been identified which results in an impact which is more severe than anticipated by the Housing Element Update FEIR.
4. No mitigation measures would be required because the proposed project's specific impacts would be less than significant.

### **Mitigation Measures**

None.

Environmental Issue Area	Housing Element Update FEIR Determination	Effect Peculiar to Project or Site?	New Significant Effect?	New Significant Off-site, Cumulative Impact?	New Information, More Severe Adverse Impact?
<b>XII. Mineral Resources</b> <i>Would the project:</i>					
a) Result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the State?	No impact	No	No	No	No
b) Result in the loss of availability of a locally important mineral resource recovery site delineated on a local general plan, specific plan or other land use plan?	No impact	No	No	No	No

**a, b) Loss of Minerals Resources of Statewide or Local Importance**

- Would the project:
- a) *Result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the State?*
  - or
  - b) *Result in the loss of availability of a locally important mineral resource recovery site delineated on a local general plan, specific plan or other land use plan?*

**Summary of Housing Element Update FEIR**

The Housing Element Update FEIR indicated that most of the sites are urban infill sites and are developed or partially developed with existing uses (see Table 2-1 in Chapter 2, Project Description), and concluded that no activities related to mineral resources currently occur within the potential sites for housing and none of the sites are designated for this use. These conditions preclude the possibility of impacts on mineral resources; therefore, there is no impact associated with mineral resources.

**Proposed Project Analysis and Conclusion**

The majority of the City is classified as Mineral Resource Zones (MRZs) with no significant mineral deposits (MRZ-1). Southeastern areas of Pleasanton, as well as areas west of I-680, are classified as areas containing mineral deposits, the significance of which cannot be evaluated from available data (MRZ-3). Given that the project site is not located in the vicinity of the MRZs identified by the City, mineral resources are not located on-site. In addition, the Geotechnical Investigation Report prepared for the proposed project (see Appendix E) does not indicate that mineral resources are present on-site. Thus, the proposed project would not result in any peculiar effects to mineral resources such that further CEQA review for this topic would be required.

**Conclusion**

With regards to Mineral Resources, the consistency checklist demonstrates that:

1. No peculiar impacts related to the proposed project or its site have been identified.
2. There are no potentially significant off-site and/or cumulative impacts which were not discussed by the Housing Element Update FEIR.
3. No substantial new information has been identified which results in an impact which is more severe than anticipated by the Housing Element Update FEIR.
4. No mitigation measures would be required because the proposed project's specific impacts would be less than significant.

**Mitigation Measures**

None.

<b>XIII. Noise</b> <i>Would the project:</i>					
a) Expose persons to or generation of noise levels in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?	Less than significant impact with mitigation incorporated	No	No	No	No
b) Expose persons to or generation of excessive groundborne vibration or groundborne noise levels?	Less than significant impact with mitigation incorporated	No	No	No	No
c) For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?	No impact	No	No	No	No

The project-specific analysis presented herein is based primarily on the Preliminary Assessment of Environmental Noise (Noise Assessment) prepared for the proposed project by Veneklasen Associates, Inc. (Veneklasen) (see Appendix G).<sup>20</sup>

**a) Substantial Noise Increase in Excess of Standards**

Would the project:      a) *Expose persons to or generation of noise levels in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?*

**Summary of Housing Element Update FEIR**

*Construction*

The Housing Element Update FEIR indicated that a significant impact would occur if project-related, noise producing construction activities exceed the City's established noise performance standards for construction activities. According to Section 9.04.100 of the Municipal Code, construction noise is exempt from the noise performance standards of the Noise Ordinance between the hours of 8:00 a.m. and 8:00 p.m. daily, except Sunday and holidays, when the exemption shall apply between 10:00 a.m. and 6:00 p.m., provided the construction activity meets at least one of the following noise limitations:

- A. No individual piece of equipment shall produce a noise level exceeding 83 dBA at a distance of 25 feet. If the device is housed within a structure on the property, the measurement shall be made outside the structure at a distance as close to 25 feet from the equipment as possible; or
- B. The noise level at any point outside of the property plane of the project shall not exceed 86 dBA.

For future development projects, two types of short-term noise impacts would occur during site preparation and project construction. The first type would result from the increase in traffic flow on local streets, associated with the transport of workers, equipment, and materials to and from the project site. Based on existing traffic volumes on roadway segments adjacent to each potential site for housing, any future individual development project's construction trips would not be expected to double the hourly or daily traffic volumes along roadway segments in the vicinity of a development site. For

---

<sup>20</sup> Veneklasen Associates, Inc. *Preliminary Assessment of Environmental Noise, The Vineyards in Pleasanton CEQA Noise Report*. December 19, 2024.

this reason, short-term intermittent noise from construction trips would not be expected to result in a perceptible increase in hourly or daily average traffic noise levels. Therefore, the Housing Element Update FEIR concluded short-term construction-related noise impacts associated with the transportation of workers and equipment to a development site would be less than significant.

The second type of short-term noise impact is related to noise generated during site preparation, grading, and construction activities. Construction noise within the City is restricted by the Municipal Code in intensity and hours of operation. Because the potential sites for housing would be developed within the city limits, they would be required to meet the requirements of the Municipal Code. In addition, the City has a code enforcement system that would handle construction noise complaints. Enforcement of the restricted hours of construction and the limit on the permissible maximum noise levels as measured at a project site property plane would reduce potential construction noise impacts to not result in a substantial temporary increase in ambient noise levels and would especially preclude potential impacts during evening and nighttime hours. Furthermore, individual housing development projects would be reviewed and approved as required by the procedures of the Municipal Code and may require additional CEQA review, as appropriate. The Housing Element Update FEIR concluded that, on a program level, future development of the potential sites for housing would result in less than significant construction noise impacts.

#### *Operation*

##### **Traffic Noise Impacts**

The Housing Element Update FEIR indicated that a significant impact would occur if project-generated traffic would result in a substantial increase in ambient noise levels compared with those that would exist without implementation of the Housing Element Update. The General Plan states that “an exterior increase of more than 4 decibels is considered significant.” The Housing Element Update FEIR concluded that no modeled roadway segment would experience an increase in traffic noise levels of greater than 4 dBA compared to noise levels that would exist without implementation of the Housing Element Update under existing plus project and cumulative plus project scenarios. Therefore, buildout of the potential sites for housing would not result in a substantial permanent increase in traffic noise levels compared to levels that would exist without implementation of the Housing Element Update, and the impact would be less than significant.

### **Compliance with Applicable Plans, Policies, or Regulations**

The Housing Element Update FEIR indicated development on potential sites for housing could expose new noise-sensitive uses to traffic or railroad noise levels in excess of the City's established normally acceptable noise land use compatibility standards.

The Housing Element Update FEIR concluded that development consistent with the Housing Element Update that would include single- or multi-family land use development adjacent to roadway segments identified in Table 3.11-7 (in the Housing Element Update Draft EIR) that have modeled noise levels in excess of 60 dBA or 65 dBA Day/Night Noise Level ( $L_{dn}$ ), respectively, as measured at 50 feet from the centerline of the outermost travel lane, would be required to demonstrate compliance with General Plan policies and incorporate project design features that would reduce traffic noise impacts for proposed development on that project site. In addition, any residential development on Site 27 (PUSD-Vineyard) must also comply with the measures included in the Vineyard Avenue Corridor Specific Plan.

### **Stationary Operational Noise Impacts-Mechanical Equipment Operations**

The Housing Element Update FEIR indicated that a significant impact would occur if operational noise levels generated by stationary noise sources at development projects on the potential sites for housing would result in a substantial permanent increase in ambient noise levels in excess of the City's noise standards. The City has established operational noise performance standards for residential properties in Section 9.04.030 of the Municipal Code which prohibits noise levels in excess of 60 dBA at any point outside the property plane unless otherwise provided in the Municipal Code. In addition, the Vineyard Avenue Corridor Specific Plan requires projects to meet "acceptable exterior noise level standards" under Noise Element Policy 1.

Primary stationary noise source associated with development consistent with the Housing Element Update would be new mechanical ventilation system equipment operations. The Housing Element Update FEIR concluded that these stationary source operational noise levels could exceed the City's threshold of 60 dBA as measured at a project property plane if they were to occur at a location closer than 25 feet from the project boundary.

Development consistent with the Housing Element Update would comply with applicable goals, policies, and programs in the General Plan. To ensure compliance with applicable goals, policies, and programs, development consistent with the Housing Element Update would implement MM NOI-1, which requires preparation of a noise analysis for any development that would locate noise producing mechanical systems within 25 feet of a project

property line. If potential noise impacts are identified, then mitigation must also be identified. The Housing Element Update FEIR concluded that compliance with the goals, policies, and programs in the General Plan and implementation of MM NOI-1 would ensure that stationary source noise impacts generated by future development projects on the potential sites for housing would be reduced to less than significant.

### **Proposed Project Analysis and Conclusion**

#### *Project Construction*

The transport of workers, construction equipment, and materials to the project site would incrementally increase noise levels on access roads leading to the site. Because workers and construction equipment would use existing routes, noise from passing trucks would be similar to existing vehicle-generated noise on the local roadways. Typically, a doubling of the Average Daily Traffic (ADT) hourly volumes on a roadway segment is required in order to result in an increase of three dBA in traffic noise levels, which is the lowest change that can be perceptible to the human ear in outdoor environments. Project-related construction trips would not be expected to double the hourly traffic volumes along any roadway segment in the project vicinity. As such, short-term construction-related noise impacts associated with worker commute and equipment transport to the project site would not exceed applicable significance thresholds.

The second type of short-term noise impact is related to noise generated during construction on the project site. Construction noise levels are rarely steady in nature and often fluctuate based on the type and number of equipment being used at any given time. In addition, at times when large equipment is not operating, noise would be at or near normal ambient levels. Construction is completed in discrete steps, each of which has a unique mix of equipment and noise characteristics. The various sequential phases would change the character of the noise generated on-site and, therefore, the noise levels surrounding the site as construction progresses. Despite the variety in the type and size of construction equipment, similarities in the dominant noise sources and patterns of operation allow construction-related noise ranges to be categorized by work phase.

The noisiest phase of construction is generally site grading, which involves the relatively steady use of mobile diesel equipment such as excavators, bulldozers, graders, and compactors. The construction period for the proposed project is estimated to last one year. However, the noisiest period of construction associated with the proposed project that could affect the

nearest noise-sensitive receptors, which include the single-family residences to the west, south, and east, would be site grading and the construction of the buildings closest to that particular neighbor. During the remainder of construction, activities would occur farther away from the nearby residences.

The Noise Assessment assumed that project construction would comply with the requirements of Section 9.04.100 of the City's Municipal Code, and that construction activities would occur only during the permitted hours of 8:00 a.m. and 8:00 p.m., Monday through Saturday, and between the hours of 10:00 a.m. to 6:00 p.m. on Sundays and holidays. As previously discussed, the City's noise ordinance further allows construction activity unless individual pieces of equipment produce a noise level exceeding 83 A-weighted decibels (dBA) at 25 feet or the noise level at any point outside of the property plane exceeds 86 dBA.

The Noise Assessment evaluates equipment typical for each stage of project construction. As shown in Table 4, typical construction equipment produces noise levels above 83 dBA at 25 feet. However, in order to represent the average noise levels at each construction phase, Veneklasen assumed that the equipment would be moving between the center of the site and near all property lines. Based on the equipment listed in Table 4, construction of the proposed project would result in the noise levels listed in Table 5 below. As shown in the table, project construction noise levels would range between 71 to 82 dBA at the nearest property line. Nonetheless, the Noise Assessment included measures to further minimize construction noise at surrounding sensitive receptors.

**Table 4  
Sound Levels of Typical Equipment Used In Construction**

Phase Name	Equipment Type	Sound Level at 50 feet

Source: Veneklasen, December 19, 2024.

MM NOI-1, as presented in the Housing Element Update FEIR, requires that development projects conduct a site-specific noise analysis that includes measures to reduce potential noise impacts to a less-than-significant level. Consistent with MM NOI-1, a Noise Assessment has been prepared for the proposed project, which includes measures to ensure construction noise would not exceed the applicable threshold. The measures set forth in the Noise Assessment are similar to the recommendations within MM NOI-1. The City of Pleasanton would require the proposed project to comply with the site-specific measures within the Noise Assessment as a Condition of Approval. Accordingly, potential noise impacts associated with the proposed project were adequately addressed in the Housing Element Update FEIR, and the proposed project would not result in any peculiar effects that would require further CEQA review.

### *Project Operation*

The primary noise sources associated with operation of the proposed project would be traffic noise on the roadways in the project vicinity. According to the project trip generation data in the Transportation Analysis prepared for the proposed project by Hexagon Transportation Consultants, Inc. (Hexagon) (see Appendix H),<sup>21</sup> the proposed project would generate 30 net new additional trips during the AM peak hour and 39 net new additional trips during the p.m. peak hour beyond the existing conditions. As previously discussed, a doubling of the ADT hourly volumes on a roadway segment is required in order to result in an increase of three dBA in traffic noise levels, the lowest change perceptible to the human ear in outdoor environments. According to the Noise Assessment, the proposed project would not double the hourly traffic volumes along any roadway segment in the project vicinity. As such, traffic noise impacts associated with project operation would not exceed applicable significance thresholds.

Non-transportation noise-generating operations associated with the proposed project would primarily consist of landscaping maintenance and HVAC equipment. The landscaping maintenance and HVAC systems would be typical of residential uses. Assuming the project HVAC systems and maintenance equipment would be in normal working order, such stationary noise sources associated with the proposed project would not substantially increase noise levels from what currently exists in the project area.

Based on the above, operation of the proposed project would not result in the generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of City standards. Thus, the proposed project would not result in any peculiar effects that would require further CEQA review for this topic.

#### **b) Groundborne Vibration/Noise Levels**

Would the project:   b) *Expose persons to or generation of excessive groundborne vibration or groundborne noise levels?*

#### **Summary of Housing Element Update FEIR**

##### *Short-term Construction Vibration Impacts to Off-site Receptors*

The Housing Element Update FEIR indicated that future construction activities that could occur with development of the potential sites for housing would

---

<sup>21</sup> Hexagon Transportation Consultants, Inc. *Transportation Analysis for 1 Vineyard Avenue Residential Development*. November 19, 2024.

generate groundborne vibration. Groundborne vibration from construction activities has the potential to impact existing or future buildings (i.e., through structural damage) and their occupants (i.e., through activity disruption, annoyance, etc.) if they are located close enough to the construction sites. In general, vibration-induced structural damage could only occur when certain types of construction activity (e.g., blasting and pile-driving) take place close to existing structures, while vibration-induced disruption/annoyance could occur during more common types of construction activity (e.g., truck movements) at greater distance from the activity area. Impact pile drivers used during the site preparation phase of construction could result in construction vibration levels from future development projects could exceed the Federal Transit Administration (FTA) damage threshold criteria, resulting in a potentially significant impact.

The Housing Element Update EIR concluded that in compliance with Program 1.6 of the Noise Element, implementation of MM NOI-2, which requires preparation of a Construction Vibration Reduction Plan, would ensure that vibration level impacts generated by future development projects would be reduced to a less than significant impact.

#### *Operational Vibration Impacts*

The Housing Element Update FEIR concluded that development consistent with the Housing Element Update would involve residential and commercial land use development. This type of land use development is not anticipated to include any permanent sources of vibration that would expose persons in the project vicinity to excessive groundborne vibration levels. Therefore, project operational groundborne vibration level impacts would be less than significant.

#### **Proposed Project Analysis and Conclusion**

Similar to noise, vibration involves a source, a transmission path, and a receiver. However, noise is generally considered to be pressure waves transmitted through air, whereas vibration usually consists of the excitation of a structure or surface. As with noise, vibration consists of an amplitude and frequency. A person's perception to the vibration depends on their individual sensitivity to vibration, as well as the amplitude and frequency of the source and the response of the system which is vibrating.

Due to the residential nature of the proposed project, project operation is not anticipated to include groundborne vibration sources. However, construction activities would include grading and foundation work, as well as the

construction of the proposed buildings. Project construction would occur over approximately one year and would generate groundborne vibration.

General Plan Program 1.6 requires the preparation of a vibration study with a site-specific engineering assessment for any construction project that would require pile-driving. According to Section 3.3 of the Noise Assessment, construction of the proposed project would be typical for a residential subdivision and, thus, is not anticipated to require pile driving. Therefore, the Noise Assessment concluded that construction of the proposed project would not result in the generation of excessive groundborne vibration.

Based on the above, impacts related to vibration were adequately addressed in the Housing Element Update FEIR, and the proposed project would not result in any peculiar effects that would require further CEQA review for this topic.

### **c) Excessive Noise Levels from Airport Activity**

Would the project: c) *For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?*

### **Summary of Housing Element Update FEIR**

The Livermore Municipal Airport is located approximately 1 mile east of the city limits. At this distance, the potential sites for housing are located well outside of the airport's 60 dBA Community Noise Equivalent Level (CNEL) noise contours. Therefore, the Housing Element Update FEIR concluded that implementation of the Housing Element Update would not expose persons residing or working at the sites to noise levels from airport activity that would be in excess of normally acceptable standards. Therefore, no impact would occur.

### **Proposed Project Analysis and Conclusion**

The public airport nearest to the project site is the Livermore Municipal Airport, which is located approximately 2.4 miles north of the project site. The project site is located outside of the airport influence area of the Livermore Municipal Airport and outside the airport's noise contours. The ALUCP qualifies such levels of noise exposure as "Permitted." As such, standard construction methods would sufficiently attenuate exterior noise to an acceptable indoor CNEL and outdoor use activities may be carried out

without interference from aircraft noise. In addition, according to the Noise Assessment, the project site is not located within two miles of a private airstrip.

Based on the above, impacts related to aircraft noise were adequately addressed in the Housing Element Update FEIR, and the proposed project would not result in any peculiar effects that would require further CEQA review for this topic.

## Conclusion

With regards to Noise, the consistency checklist demonstrates that:

1. No peculiar impacts related to the proposed project or its site have been identified.
2. There are no potentially significant off-site and/or cumulative impacts which were not discussed by the Housing Element Update FEIR.
3. No substantial new information has been identified which results in an impact which is more severe than anticipated by the Housing Element Update FEIR.
4. MM NOI-1 and NOI-2 from the Housing Element Update FEIR would be required and would reduce potential impacts to below a level of significance consistent with the analysis in the Housing Element Update FEIR.

## Mitigation Measures

### Housing Element Update FEIR Mitigation Measures

#### MM NOI-1 Stationary Source Noise Impact Reduction Measure

Prior to issuance for building permits for a project, for any development project on potential sites for housing that would include any noise producing mechanical systems located within 25 feet of a property line, the project applicant shall retain a Noise Specialist to conduct a site-specific project-level noise analysis to evaluate compliance with Section 9.04.030 of the Municipal Code, which prohibits noise levels in excess of 60 A-weighted decibel (dBA) at any point outside the property plane, as defined in Section 9.04.020 of the Municipal Code as “a vertical plane including the property line which determines the property boundaries in space.” If the analysis identifies that proposed mechanical system operations could result in an exceedance of this noise performance standard, then specific

measures to attenuate the noise impact shall be outlined in the analysis. The analysis shall be submitted to the City's Building & Safety Division for review and approval prior to issuance of building permits. The final noise-reduction measures shall be included on all final construction and building documents and/or construction management plans and submitted for verification to the City. Specific measures may include, but are not limited to, the following measures or design features:

- The project applicant shall utilize quieter mechanical systems that would not result in an exceedance of the City's operational noise standards.
- The project applicant shall enclose mechanical systems in a sound-attenuating structure or shall install sound barriers adjacent to the proposed system that would reduce operational noise levels to not exceed the City's noise performance standards as measured at the property line.
- The project application shall relocate the proposed mechanical system further from property line to reduce operational noise levels to not exceed the City's noise performance standards as measured at the property line.

#### **MM NOI-2 Construction Vibration Reduction Plan**

For any future development projects that would use pile-driving within 200 feet of an off-site structure, prior to the issuance of grading permits for a project, the project sponsor shall retain a Noise Specialist to prepare a Construction Vibration Reduction Plan for submittal to the City's Planning Director for review and approval that identifies specific techniques, such as the depth and location of temporary trenching, that would reduce potential vibration impacts to less than significant for any impacted structures. Upon approval by the City, the construction vibration reduction measures shall be incorporated into the construction documents. A note shall be provided on grading and building plans indicating that, during grading and construction, the property owner/developer shall be responsible for requiring contractors, to be monitored via on-site inspection

by the Community Development Department, to implement these measures to limit construction-related vibration impacts.

For any future development projects that would necessitate the use of large vibratory rollers within 30 feet of an off-site structure, or the use of heavy construction equipment (i.e., construction equipment with a peak particle velocity [PPV] at 25 feet [inches per second] rating of 0.051 or greater as shown in Table 3.11-3 in Section 3.11, Noise, in this Program EIR) within 15 feet of an off-site structure, the project sponsor shall retain a Noise Specialist to prepare a Construction Vibration Reduction Plan for submittal to the City's Director of Community Development for review and approval that identifies specific techniques, such as the depth and location of temporary trenching, that would reduce potential vibration impacts to less than significant for any impacted structures. Upon approval by the City, the construction vibration reduction measures shall be incorporated into the construction documents. A note shall be provided on grading and building plans indicating that, during grading and construction, the property owner/developer shall be responsible for requiring contractors, to be monitored via on-site inspection by the Community Development Department, to implement these measures to limit construction-related vibration impacts.

### **Mitigation Measures for the Proposed Project**

Implement MM NOI-1 and NOI-2. It should be noted that a site-specific project-level noise analysis, as required by MM NOI-1, has been prepared for the proposed project.

Environmental Issue Area	Housing Element Update FEIR Determination	Effect Peculiar to Project or Site?	New Significant Effect?	New Significant Off-site, Cumulative Impact?	New Information, More Severe Adverse Impact?
<b>XIV. Population and Housing</b> <i>Would the project:</i>					
a) Induce substantial unplanned population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of roads or other infrastructure)?	Less than significant impact	No	No	No	No
b) Displace substantial numbers of existing people or housing, necessitating the construction of replacement housing elsewhere?	Less than significant impact	No	No	No	No

**a) Growth Inducement**

Would the project: *Induce substantial population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of roads or other infrastructure)?*

**Summary of Housing Element Update FEIR**

The Housing Element Update FEIR indicated that because the Housing Element Update would provide sufficient sites to accommodate the RHNA allocation for the City, the population growth associated with development of those sites would be consistent with the forecast growth in Plan Bay Area 2050. Many of the Housing Element Update's policies and programs guide population growth within the City through 2031 and support the objectives of the City and would not result in unplanned direct or indirect population growth. Development within the potential sites for housing would be required

to abide by policies and programs to ensure that new development or redevelopment does not induce substantial additional unanticipated or unplanned population growth, either directly or indirectly. Additionally, compliance with the regulations laid out in the Municipal Code would ensure that the Housing Element Update would not result in unplanned direct or indirect population growth. Furthermore, future development consistent with the Housing Element Update would be subject to review and approval by the City, including environmental compliance review. Future development would be required to demonstrate consistency with the Housing Element Update (including rezonings, General Plan, and Specific Plan Amendments) and comply with requirements of the General Plan protecting against substantial unplanned growth and displacement of existing residential uses. Finally, the City has supported urban growth and development for almost 130 years and is served with infrastructure (e.g., roads, freeways, railroads, transit, water, sewer, storm drainage, electricity, natural gas, etc.); development consistent with the Housing Element Update would not result in indirect growth. The Housing Element Update FEIR concluded impacts would be less than significant.

#### **Proposed Project Analysis and Conclusion**

The project site is undeveloped. Surrounding existing land uses include open space to the north, across Vineyard Avenue, and the Cemex-Pleasanton Eliot Aggregates Quarry further to the north; a vineyard and single-family residences to the east, across Manoir Lane; single-family residences to the south, across Old Vineyard Avenue; and a vineyard and single-family residences to the west, across Thiessen Street.

Based on the estimated 2.99 persons per household for single-family homes used in the Housing Element Update FEIR, the 27 proposed single-family residences would potentially generate approximately 81 additional residents (27 residential units x 2.99 persons per household = 80.73 residents) in the City of Pleasanton. The proposed project would also include an ADU on each residential lot. The ADUs were assumed to be primarily occupied by single residents, resulting in an additional 27 residents for a total population increase of approximately 108 people. Because the proposed project is consistent with the type of residential development anticipated for the site by the City, the potential growth of 108 residents associated with development of the site has been anticipated by the City and analyzed in the Housing Element Update FEIR.

Based on the above, impacts related to inducing substantial unplanned population growth in an area, either directly or indirectly, were adequately addressed in the Housing Element Update FEIR, and the proposed project would not result in any peculiar effects that would require further CEQA review related to such.

**b) Housing Displacement/Replacement Housing**

Would the project: *Displace substantial numbers of existing people or housing, necessitating the construction of replacement housing elsewhere?*

**Summary of Housing Element Update FEIR**

The Housing Element Update FEIR indicated the Housing Element Update would result in a significant impact if it would displace substantial numbers of people or existing housing which would require the construction of replacement housing elsewhere. Implementation of the Housing Element Update would result in the development of additional housing units at all affordability levels to support the City's growing population and future housing demands, as specified in the RHNA, by rezoning all or some of the potential sites for rezoning to accommodate housing development. In addition, pursuant to Program 3.6 of the Housing Element Update, the City would be required to replace housing units that are demolished with units affordable to the same or lower-income as a condition of development.

Therefore, implementation of the Housing Element Update and the rezoning of some or all of the potential sites for rezoning is not anticipated to displace a substantial number of people or housing units and would not require the construction of replacement housing elsewhere due to the displacement of housing or people. Therefore, there would be a less than significant impact related to population and housing displacement.

**Proposed Project Analysis and Conclusion**

The project site is currently undeveloped and does not include existing residential structures. As such, development of the proposed project would not displace existing housing or people and would not necessitate the construction of replacement housing elsewhere. Therefore, impacts related to displacement of substantial housing or people were adequately addressed in the Housing Element Update FEIR, and the proposed project would not result in any peculiar effects that would require further CEQA review related to such.

## Conclusion

With regards to Population and Housing, the consistency checklist demonstrates that:

1. No peculiar impacts related to the proposed project or its site have been identified.
2. There are no potentially significant off-site and/or cumulative impacts which were not discussed by the Housing Element Update FEIR.
3. No substantial new information has been identified which results in an impact which is more severe than anticipated by the Housing Element Update FEIR.
4. No mitigation measures would be required because the proposed project's specific impacts would be less than significant.

## Mitigation Measures

None.

Environmental Issue Area	Housing Element Update FEIR Determination	Effect Peculiar to Project or Site?	New Significant Effect?	New Significant Off-site, Cumulative Impact?	New Information, More Severe Adverse Impact?
<b>XV. Public Services</b> <i>Would the project result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for any of the public services:</i>					
a) Fire protection?	Less than significant impact	No	No	No	No
b) Police protection?	Less than significant impact	No	No	No	No
c) Schools?	Less than significant impact	No	No	No	No
d) Libraries?	Less than significant impact	No	No	No	No
e) Other public facilities?	Less than significant impact	No	No	No	No

**a, b) Need for New or Altered Fire Protection Facilities or Police Protection Facilities**

- Would the project:
- a) *Result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for fire protection? or*
  - b) *Result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for police protection?*

## **Summary of Housing Element Update FEIR**

### *Fire Protection Facilities*

The Housing Element Update FEIR indicated that development consistent with the Housing Element Update could result in an increased demand for fire protection services, and, as this demand increases, there may be a need to increase staffing and equipment to maintain acceptable service ratios, reflex times, and other performance standards. This would require existing fire stations to be able to accommodate the additional staff and/or equipment. If an existing fire station is at capacity for staffing, this could require an expansion of an existing fire station or construction of a new fire station, the construction of which could cause environmental impacts. The project-specific environmental impacts of constructing new or expanded fire protection facilities to support the growth anticipated as part of the Housing Element Update cannot be determined at the time of certification of the Housing Element Update FEIR because the designs of future new or expanded facilities are not known. It can be expected that construction and operation of future new or expanded fire protection facilities would have similar impacts as would construction and operation of other types of new development consistent with the Housing Element Update.

The General Plan includes policies and programs to ensure that fire protection services keep pace with new development. As the City receives development applications for subsequent development consistent with the Housing Element Update, those applications will be reviewed by the City for compliance with the policies and programs of the General Plan and Vineyard Avenue Corridor Specific Plan to ensure that fire protection services keep pace with new development. In addition, the Municipal Code, which implements the General Plan, would be reviewed when development applications are received. Through implementation of the capital facilities fee, developers would be responsible for payment of any improvements needed, including the need for new facilities, which would effectively mitigate any increased demand for services associated with development consistent with the Housing Element Update. Therefore, the Housing Element Update FEIR concluded future development consistent with the Housing Element Update would not result in significant adverse effects related to fire protection services and impacts would be less than significant.

### *Police Protection Facilities*

The Housing Element Update FEIR indicated that development consistent with the Housing Element Update could result in an increased demand for

police protection services. Growth on the outer limits of the City and outside of the city limits, such as on Sites 1 (Lester) and 22 (Merritt), could significantly increase driving time and distance for officers responding to both emergency and non-emergency calls for service. As the demand for police services increases, there may be a need to increase staffing and equipment, including the development of additional police substations, to maintain acceptable service ratios, response times, and other performance standards. However, this would require existing police stations to be able to accommodate the additional staff and/or equipment. If an existing police station is at capacity for staffing, this could require an expansion of an existing police station or construction of a new police substation, the construction of which could cause environmental impacts. The project-specific environmental impacts of constructing new or expanded police protection facilities to support the growth anticipated as part of the Housing Element Update cannot be determined at the time the Housing Element Update FEIR was certified because the designs of future new or expanded facilities are not known. It can be expected that construction and operation of future new or expanded police protection facilities would have similar impacts as would construction and operation of other types of new development consistent with the Housing Element Update.

As the City receives development applications for subsequent development consistent with the Housing Element Update, those applications would be reviewed by the City for compliance with the policies and programs of the General Plan to ensure that police protection services keep pace with new development. In addition, the Municipal Code contains rules and regulations related to police services and payment of public service fees. Chapter 3.22 of the Municipal Code requires that development projects pay capital facilities fee apportioned to the cost of the necessary public improvements associated with each development within the City. Specifically, through the capital facilities fee the developer would be responsible for any improvements needed for police protection services, which would effectively mitigate any increased demand for services associated with development consistent with the Housing Element Update. Therefore, the Housing Element Update FEIR concluded future development consistent with the Housing Element Update would not result in significant adverse effects related to police protection services and impacts would be less than significant.

#### **Proposed Project Analysis and Conclusion**

While the proposed project would result in increased demands on fire and police protection services, the proposed project is consistent with the type of

development anticipated for the site by the City. Therefore, any associated increase in demands would be consistent with what has been anticipated by the City and analyzed in the Housing Element Update FEIR. Furthermore, the project would comply with all applicable State and local requirements related to fire safety and security, including installation of fire sprinklers, and would be subject to payment of applicable development impact fees to ensure the project contributes a fair share towards funding new and/or expanded facilities. Compliance with such standards would minimize fire and police protection demands associated with the project. Therefore, impacts related to the need for new or physically altered fire or police protection facilities, the construction of which could cause significant environmental impacts, were adequately addressed in the Housing Element Update FEIR, and the proposed project would not result in any peculiar effects that would require further CEQA review related to such.

**c, d, e)      Need for New or Altered School Facilities, Libraries, and Other Public Facilities**

Would the project: *Result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for schools, libraries, and other public facilities?*

**Summary of Housing Element Update FEIR**

*School Facilities*

The Housing Element Update FEIR indicated that development consistent with the Housing Element Update could result in development on all of the potential sites for housing. If all the sites were to develop at their maximum density, a total of approximately 2,532 K-12 students could be generated, including approximately 1,377 students in Grades K-5, approximately 598 students in Grades 6-8, and approximately 557 students in Grades 9-12. A representative from PUSD noted that new students associated with development consistent with the Housing Element Update could require the need to build additional capacity or new schools to accommodate growth. Specifically, elementary schools in the northern area of PUSD (Donlon and Fairlands) are currently impacted, and any further housing would require students to be assigned to another campus. The representative also noted that the current level of developer fees set by State law is not sufficient to cover the full cost of facility impacts associated with additional housing.

The General Plan includes policies and programs to ensure that school facilities keep pace with new development. Notwithstanding these General Plan policies and programs, while State law encourages coordination between cities and school districts related to planning for school siting, state law is also clear that long range master planning for school sites is ultimately the responsibility of the school district (see California Government Code § 65352.2). Section 65995(h) of the California Government Code (SB 50), clarifies that the payment of statutory fees “. . . is deemed to be full and complete mitigation of the impacts of any legislative or adjudicative act, or both, involving, but not limited to, the planning, use, or development of real property.”

Additionally, as part of its efforts to anticipate and appropriately plan for future growth, PUSD prepares a 7-year projection of student population, updated annually, which looks at planned and proposed development within its enrollment boundaries, as well as demographic shifts, and “mobility factors” such as inter-district and inter-school transfers which over time affect overall enrollment. It is noted that the most recent study takes into account approximately 2,983 units of new residential development in Pleasanton (including at least some sites that are part of the Housing Element Update). Depending on other future enrollment trends, modifications to attendance area maps may be undertaken by PUSD.

New student population could also have the potential to cause the need for new or expanded school facilities. As the demand for school services increases from development consistent with the Housing Element Update, there may be a need to increase staffing, facilities, and equipment to maintain acceptable service ratios and other performance objectives for schools. However, this would require existing school sites to be able to accommodate the additional staff, facilities and/or equipment. If an existing school site is at capacity for staffing or for students, this could require an expansion of an existing school site or construction of a new school site, the construction of which could cause environmental impacts. The project-specific environmental impacts of constructing new or expanded school facilities to support the growth anticipated as part of the Housing Element Update could not be determined at the time the Housing Element Update FEIR was certified because the site-specific locations and designs of future new or expanded facilities are not known. It can be expected that construction and operation of future new or expanded school facilities would have similar impacts as would construction and operation of other types of new development under the Housing Element Update. Further, PUSD would

be required to receive approval from the Division of the State Architect and complete any required CEQA review for construction of new or expanded school facilities.

As noted above, the payment of statutory fees “. . . is deemed to be full and complete mitigation of the impacts of any legislative or adjudicative act, or both, involving, but not limited to, the planning, use, or development of real property. . . on the provision of adequate school facilities.” Therefore, with the payment of required state established SB 50 fees, future development consistent with the Housing Element Update would not result in significant adverse effects related to school facilities and impacts would be less than significant.

#### *Library Facilities*

A representative for the Pleasanton Public Library noted that to accommodate development consistent with the Housing Element Update there would be additional staffing, equipment, and facility space needed to maintain acceptable service ratios and other performance objectives for library facilities, which could require an upgrade of an existing library or construction of a new library, the construction of which could cause environmental impacts. The representative noted that the additional staffing, equipment, and facility space could be accommodated by a new library envisioned as part of the Pleasanton Civic Center Library Master Plan<sup>22</sup> or with the completion of a satellite branch. However, at the time of certification of the Housing Element Update FEIR, no specific plans have been approved for any development associated with expanded library facilities as part of the Pleasanton Civic Center Library Master Plan;<sup>23</sup> thus, it was determined to be too speculative to evaluate as part of the analysis within the Housing Element Update FEIR. Library and Recreation staff are currently in the planning stages of a mobile vehicle to help expand library and recreation services with an anticipated in-service date by spring 2024.

The General Plan includes policies and programs to ensure that library facilities keep pace with new development. The Municipal Code contains rules and regulations related to payment of public service fees, which includes libraries. Chapter 3.22 of the Municipal Code requires that development projects pay capital facilities fee apportioned to the cost of

---

<sup>22</sup> City of Pleasanton. 2016. Pleasanton Civic Center/Library Master Plan. Website: <http://www.cityofpleasantonca.gov/civicax/filebank/blobdload.aspx?BlobID=34561>. Accessed May 3, 2022.

<sup>23</sup> City of Pleasanton. 2016. Pleasanton Civic Center/Library Master Plan. Website: <http://www.cityofpleasantonca.gov/civicax/filebank/blobdload.aspx?BlobID=34561>. Accessed May 3, 2022.

the necessary public improvements associated with each development within the City. While there is no portion of the capital facilities fee automatically earmarked for the provision of library services, the City, in its discretion, can direct a portion of the capital facilities fee to library facilities. The Pleasanton Development Impact Fee Nexus Study<sup>24</sup> assumes a new library facility to be developed as part of the Civic Center Master. However, as stated above, no plans have been approved at this time.

As described above, the project-specific environmental impacts of constructing new or expanded library facilities to support the growth associated with the Housing Element Update cannot be determined at the time of certification of the Housing Element Update FEIR because the site-specific locations and designs of future new or expanded facilities are not known. As the City proceeds with the construction of new or expanded library facilities, those projects would be reviewed by the City for compliance with the policies and programs of the General Plan and Municipal Code.

Furthermore, as the City receives development applications for subsequent development consistent with the Housing Element Update, those applications would be reviewed by the City for compliance with the policies and programs of the General Plan to ensure that library facilities keep pace with new development. In addition, development consistent with the Housing Element Update would be required to pay capital facility fees in accordance with Chapter 3.22. Therefore, future development consistent with the Housing Element Update would not result in significant adverse effects related to library facilities and impacts would be less than significant.

#### *Other Public Facilities*

The Housing Element Update FEIR indicated that as demand for other public facilities increases from development consistent with the Housing Element Update, there may be an additional need to increase staffing and equipment to maintain acceptable service ratios and other performance objectives for these other public facilities. However, this would require existing public facilities to be able to accommodate the additional staff and/or equipment. If an existing public facility is at capacity for staffing, this could require an expansion of an existing public facility or construction of a new public facility, the construction of which could cause environmental impacts.

---

<sup>24</sup> City of Pleasanton. 2018. Pleasanton Development Impact Fee Nexus Study. September 24. Website: <https://www.cityofpleasantonca.gov/civicax/filebank/blobdload.aspx?BlobID=34260>. Accessed August 29, 2022.

The project-specific environmental impacts of constructing new or expanded other public facilities to support the growth associated with the Housing Element Update could not be determined at the time the Housing Element Update FEIR was certified because the site-specific locations and designs of future new or expanded facilities are not known. As the City proceeds with the construction of new or expanded library facilities, those projects would be reviewed by the City for compliance with the policies and programs of the General Plan and Municipal Code. Furthermore, as the City receives development applications for subsequent development consistent with the Housing Element Update, those applications will be reviewed by the City for compliance with the policies and programs of the General Plan to ensure that other facilities keep pace with new development. In addition, development consistent with the Housing Element Update would be required to pay capital facilities fees in accordance with Chapter 3.22 of the Municipal Code.

The Housing Element Update FEIR concluded the physical effects on the environment from the construction of new or expanded public facilities would be less than significant, and future development consistent with the Housing Element Update would not result in significant adverse effects related to other public facilities and impacts would be less than significant.

#### **Proposed Project Analysis and Conclusion**

The proposed project is consistent with the type of residential development anticipated for the site by the City; as such, any associated increase in student population was anticipated and analyzed in the Housing Element Update FEIR. Based on the student generation rates for the project site listed in Table 3.13-9, development of the proposed 27 new single-family residences could result in a total of approximately 18 new students. The assumption was made that the ADUs would be primarily occupied by single residents without school-aged children.

With respect to parks and other public facilities, such as libraries, the proposed project would not be anticipated to result in a substantial increase in demand for such services such that expanded facilities would be required. Future residents of the proposed project would have access to the City of Pleasanton Library. In addition, the proposed project includes an on-site park and amenities, such as a gathering space, open play turf area, and tot lot.

Based on the above, impacts related to the need for new or physically altered schools, parks, or other public facilities, the construction of which could cause significant environmental impacts, were adequately addressed

in the Housing Element Update FEIR, and the proposed project would not result in any peculiar effects that would require further CEQA review related to such.

### **Conclusion**

With regards to Public Services, the consistency checklist demonstrates that:

1. No peculiar impacts related to the proposed project or its site have been identified.
2. There are no potentially significant off-site and/or cumulative impacts which were not discussed by the Housing Element Update FEIR.
3. No substantial new information has been identified which results in an impact which is more severe than anticipated by the Housing Element Update FEIR.
4. No mitigation measures would be required because the proposed project's specific impacts would be less than significant.

### **Mitigation Measures**

None.

Environmental Issue Area	Housing Element Update FEIR Determination	Effect Peculiar to Project or Site?	New Significant Effect?	New Significant Off-site, Cumulative Impact?	New Information, More Severe Adverse Impact?
<b>XVI. Recreation</b> <i>Would the project:</i>					
a) Increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?	Less than significant impact	No	No	No	No
b) Include recreational facilities or require the construction or expansion of recreational facilities, which might have an adverse physical effect on the environment?	Less than significant impact	No	No	No	No

**a, b) Effects of Increased Use of Parks and Effects from Provision of Parks or Recreational Facilities**

*Would the project:*

- a) *increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated; or*
- b) *include recreational facilities or require the construction or expansion of recreational facilities, which might have an adverse physical effect on the environment?*

**Summary of Housing Element Update FEIR**

*Increased Use of Parks*

The Housing Element Update FEIR indicated that development and growth in the City would increase demand for existing parks and recreational facilities. As shown in Exhibit 3.13-3 in the Housing Element Update Draft EIR, many of

the proposed sites for rezoning are within 0.5-mile (i.e., walking distance) of a neighborhood or community park. Additionally, the City meets the service standard of over 5 acres of neighborhood parkland in 2031.

As the demand for parks and recreational facilities increases, there may be a need to increase staffing and other resources to maintain existing parks and recreational facilities from their increased use. Additionally, as the demand for parks and recreational facilities increases, there may be a need to expand existing parks and recreational facilities or construct new parks and recreational facilities to maintain acceptable service ratios.

As the City receives development applications for subsequent development consistent with the Housing Element Update, those applications will be reviewed by the City for compliance with the policies and program of the General Plan to ensure that parks and recreational facilities keep pace with new development. Specifically, Program 10.2 of Goal 6 of Chapter 6, Public Facilities and Community Program Element, encourages developers to dedicate public park acreage in areas designated for park use on the General Plan map rather than contribute in lieu fees. In addition, development consistent with the Housing Element Update would be required to pay the capital facilities fee in accordance with Chapter 3.22 of the Municipal Code. Therefore, the Housing Element Update FEIR concluded future development consistent with the Housing Element Update would not result in significant adverse effects related to parks and recreational facilities and impacts would be less than significant.

*Provision of Parks or Recreational Facilities*

The Housing Element Update FEIR indicated that as the demand for parks and recreational facilities increases, there may be a need to expand existing parks and recreational facilities or construct new parks and recreational facilities to maintain acceptable service ratios. There could be environmental impacts associated with the construction of new or expanded parks and recreational facilities. The project-specific environmental impacts of constructing new or expanded parks and recreational facilities to support the growth associated with the Housing Element Update could not be determined at the time the Housing Element Update FEIR was certified because the designs of future new or expanded facilities were not known.

As the construction of new or expanded parks and recreational facilities proceeds, those projects will be reviewed by the City for compliance with the policies and programs of the General Plan and the Municipal Code.

Therefore, the Housing Element Update FEIR concluded the physical effects on the environment from the construction of new or expanded parks and recreational facilities would be less than significant.

### **Proposed Project Analysis and Conclusion**

As previously discussed and based on the estimated 2.99 persons per household for single-family residences provided in the Housing Element Update FEIR, the proposed project would potentially generate approximately 108 new residents. Given the City's parkland standard of five acres per 1,000 residents, the proposed project's 108 additional residents would equate to a demand of approximately 0.54-acre of additional parkland (108 residents x 0.005 acres = 0.54 acres). Therefore, the proposed three acres of parkland included as part of the project would meet the City's parkland standards.

Given that the proposed project would be consistent with the type of residential development anticipated for the project site, the increase in population associated with project buildout, as well as the resulting increase in demand for parks and recreation facilities, has been anticipated and analyzed in the Housing Element Update FEIR. In addition, the proposed project would incorporate recreational amenities on-site, including an outdoor gathering space, open play turf area, and tot lot.

Based on the above, impacts related to parks and recreation facilities were adequately addressed in the Housing Element Update FEIR, and the proposed project would not result in any peculiar effects that would require further CEQA review related to such.

### **Conclusion**

With regards to Recreation, the consistency checklist demonstrates that:

1. No peculiar impacts related to the proposed project or its site have been identified.
2. There are no potentially significant off-site and/or cumulative impacts which were not discussed by the Housing Element Update FEIR.
3. No substantial new information has been identified which results in an impact which is more severe than anticipated by the Housing Element Update FEIR.
4. No mitigation measures would be required because the proposed project's specific impacts would be less than significant.

## Mitigation Measures

None.

Environmental Issue Area	Housing Element Update FEIR Determination	Effect Peculiar to Project or Site?	New Significant Effect?	New Significant Off-site, Cumulative Impact?	New Information, More Severe Adverse Impact?
<b>XVII. Transportation</b> <i>Would the project:</i>					
a) Conflict with a program plan, ordinance or policy of the circulation system, including transit, roadway, bicycle and pedestrian facilities?	Less than significant impact	No	No	No	No
b) Conflict or be inconsistent with CEQA Guidelines Section 15064.3, subdivision (b)?	Significant and unavoidable impact	No	No	No	No
c) Substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?	Less than significant impact	No	No	No	No
d) Result in inadequate emergency access?	Less than significant impact	No	No	No	No

The following project-specific discussions presented herein are based primarily on a Transportation Analysis Memorandum (Traffic Memo) prepared for the proposed project by Hexagon (see Appendix H).<sup>25</sup>

<sup>25</sup> Hexagon Transportation Consultants, Inc. *Transportation Analysis for 1 Vineyard Avenue Residential Development*. November 19, 2024.

**a) Affect to Circulation System**

Would the project: *Conflict with a program plan, ordinance or policy of the circulation system, including transit, roadway, bicycle and pedestrian facilities?*

**Summary of Housing Element Update FEIR**

The Housing Element Update FEIR indicated that development consistent with the Housing Element Update is not forecasted to generate transit, roadway, bicycle, or pedestrian use that would exceed the capacity of area facilities to serve that demand.

The Housing Element Update FEIR concluded that because development consistent with the Housing Element Update would be subject to all applicable state, regional, and City guidelines, standards, and specifications related to service standards, including, but not limited to, those provided in the Hacienda Design Guidelines, Vineyard Avenue Corridor Specific Plan, the City of Pleasanton Bicycle and Pedestrian Master Plan, and CAP 2.0, it would not conflict with adopted policies, plans, or programs. Therefore, the Housing Element Update would result in a less than significant impact on the circulation system, including transit, bicycle, and pedestrian facilities and policies.

**Proposed Project Analysis and Conclusion**

Since the release of the General Plan EIR, the law has changed with respect to how transportation-related impacts may be addressed under CEQA. Traditionally, lead agencies used level of service (LOS) to assess the significance of such impacts, with greater levels of congestion considered to be more significant than lesser levels. LOS represents a qualitative description of the traffic operations experienced by the driver along a roadway segment or at an intersection and ranges from LOS A, which represents the absence of congestion and little delay, to LOS F, which signifies excessive congestion and delays. Mitigation measures typically took the form of capacity-increasing improvements, which often had their own environmental impacts (e.g., to biological resources). Depending on circumstances, and an agency's tolerance for congestion (e.g., as reflected in its general plan), LOS D, E, or F often represented significant environmental effects. In 2013, the Legislature passed legislation with the intention of ultimately removing LOS in most instances as a basis for environmental analysis under CEQA.

Level of Service

In order to estimate trips generated by the proposed project, Hexagon used the published trip generation rates from the Institute of Transportation Engineers’ (ITE) Trip Generation Manual, 11th Edition. Hexagon used published trip rates for the ITE Land Use Code 210 (Single Family Detached Housing) and the ITE Land Use Code 220 (Multi Family Housing) for the ADUs to estimate traffic for the proposed project. The project trip generation estimates are portrayed in Table 6. As illustrated therein, the proposed development would generate approximately 437 daily trips, including 30 trips during the a.m. peak hour, and 39 trips during the p.m. peak hour.

**Table 6  
Project Trip Generation and Comparison**

Land Use	Size	Daily		a.m. Peak Hour			p.m. Peak Hour		
		Rate	Trips	Rate	Trips	In/Out	Rate	Trips	In/Out
Residential Project	27 units	16.17	437	10	31	41	28	17	45

Source: TJKM Transportation Consultants, January 2, 2024.

Based on February and August 2024 traffic counts collected by the City, Hexagon then calculated intersection LOS for both signalized and unsignalized intersections in the area. The following intersections were studied during typical weekday a.m. and p.m. peak hours:

- Vineyard Avenue/Pietronave Lane/Yolanda Court (signalized);
- Vineyard Avenue/Vineyard Terrace (unsignalized);
- Vineyard Avenue/Thiessen Street (unsignalized);
- Vineyard Avenue/Manoir Lane (unsignalized);
- Vineyard Avenue/Safreno Way (unsignalized); and
- Vineyard Avenue/Machado Place (unsignalized).

According to the Traffic Memo, all study intersections under Existing conditions currently operate at LOS A or B during the a.m. and p.m. peak hours and would continue to do so during project operation. As such, traffic impacts associated with operation of the proposed project are anticipated to be within the acceptable parameters established by the City.

As shown in Table 3 of the Traffic Memo, all study intersections under cumulative conditions would operate at LOS C or better during the a.m. and p.m. peak hours, which is acceptable to the City pursuant to General Plan Policy 2 of the Circulation Element (see Exhibit 10).

**Exhibit 10: Project Intersection Levels of Service**

**Table 3  
Cumulative without Project and Cumulative with Project Intersection Levels of Service**

Intersection	Traffic Control	Peak Hour	Cumulative without Project		Cumulative with Project		
			Delay <sup>1</sup>	LOS <sup>1</sup>	Delay <sup>1</sup>	LOS <sup>1</sup>	Change in Delay
<b>Signalized Intersection</b>							
Vineyard Ave & Pietronave Ln/Yolanda Ct	signal	AM	4.0	A	4.1	A	0.1
		PM	4.0	A	4.0	A	0.0
<b>Unsignalized Intersections</b>

		PM	0.3/20.2	A/C	0.3/20.5	A/C	0.0/0.3
Vineyard Ave & Machado Place	SSSC	AM	0.4/15.5	A/C	0.4/15.6	A/C	0.0/0.1
		PM	0.2/15.8	A/C	0.2/15.9	A/C	0.0/0.1

Note 1: Intersection levels of service were determined using Synchro traffic analysis software, based on the Highway Capacity Manual (HCM) methodology.

Note 2: City of Pleasanton LOS standard for signalized intersections is LOS D. The LOS standard for unsignalized intersections is LOS E for the side-street controlled movement at the intersection.

<sup>1</sup> Signalized intersection levels of service and delays reported are for average control delay per vehicle. The intersection levels of service and delays reported for the side-street-stop-controlled (SSSC) intersections are reported for both the overall average delay/ the approach with highest delay.

Source: Hexagon Transportation Consultants, Inc., 2024

All study intersections under Cumulative Plus Project conditions would continue to operate at LOS C or better. As such, cumulative traffic operation impacts are anticipated to be less than significant.

In addition, the proposed project is consistent with the type of residential development anticipated for the project site; therefore, buildout of the site with the proposed uses was generally considered as part of the Housing Element Update FEIR. As such, impacts related to conflicting with an applicable plan, ordinance, or policy addressing roadway facilities were adequately addressed in the Housing Element Update FEIR, and effects peculiar to the proposed project would not occur.

#### *Pedestrian, Bicycle, and Transit Facilities*

With respect to pedestrian facilities, according to the Traffic Memo, most local streets in the immediate vicinity of the site have sidewalks, including Thiessen Street, Manoir Lane, and the intersection at Vineyard Avenue and Pietronave Lane/Yolanda Court. In addition, the Old Vineyard Avenue Trail is a Class I shared-use path from north of the intersection at Vineyard Avenue and Pietronave Lane to Mingoia Street east of the site. However, Vineyard Avenue, the principal access to the site, does not currently include sidewalks.

Development of the proposed project would not result in any substantial modifications to the City's existing roadway system. In addition, the proposed sidewalks along the project frontages would close all existing gaps in the sidewalks on Thiessen Street and Manoir Lane, improving pedestrian access in the area. Although the proposed project would be likely to increase the use of pedestrian facilities in the project vicinity, because the proposed project is consistent with the type of residential development anticipated for the site by the City, such increases have been anticipated and analyzed in the Housing Element Update FEIR. Thus, impacts related to conflicting with an applicable plan, ordinance, or policy addressing pedestrian facilities were adequately addressed in the Housing Element Update FEIR, and effects peculiar to the proposed project would not occur.

According to the Traffic Memo, existing bike lanes in the project vicinity include a Class II bike lane on Vineyard Avenue from Bernal Avenue to State Route (SR) 84, as well as the Old Vineyard Avenue Trail, which functions as a Class I shared-use path. Further improvements to bicycle facilities along Vineyard Avenue in the vicinity of the project site are not currently planned by the City. Thiessen Street and Manoir Lane do not currently have bike lanes, but the Traffic Memo notes that the volume and speed of traffic on the

streets are suitable for shared use between bikes and motor vehicles. Development of the proposed project would not interfere with existing or proposed bicycle facilities. In addition, the proposed project is not expected to generate a significant number of bicycle trips. As such, any demand for bicycle facilities generated by the proposed project could be accommodated by the existing bicycle facilities in the vicinity. Furthermore, by providing on-site bicycle parking spaces within the park area, the proposed project would comply with the City of Pleasanton standards regarding bicycle parking for residential developments. Thus, impacts related to conflicting with an applicable plan, ordinance, or policy addressing bicycle facilities were adequately addressed in the Housing Element Update FEIR, and effects peculiar to the proposed project would not occur.

The City of Pleasanton is provided transit services by BART and various bus routes. The nearest BART station, the Dublin/Pleasanton Station, is located approximately 4.63 miles northwest of the project site. Transit service available to the site is provided by the Livermore Amador Valley Transit Authority (LAVTA), operator of the Wheels bus system in the Tri-Valley. The site is served by bus lines 601 and 611, both of which provide school bus service along Vineyard Avenue. For both routes, the bus stop nearest the site is located at the intersection of Vineyard Avenue and El Capitan Drive/Montevino Drive, located approximately one mile west of the site. Because the proposed project would be consistent with the type of residential development anticipated for the site by the City, the increase in transit ridership generated by the proposed project has been anticipated and analyzed in the Housing Element Update FEIR, and, thus, the City's existing transit facilities would be able to accommodate the transit ridership demands generated by the proposed project. Therefore, impacts related to conflicting with an applicable plan, ordinance, or policy addressing transit facilities were adequately addressed in the Housing Element Update FEIR, and effects peculiar to the proposed project would not occur.

#### *Conclusion*

Based on the above, the project would not conflict with any existing or proposed pedestrian, bicycle, or transit facilities. Impacts related to conflicting with an applicable plan, ordinance, or policy addressing the circulation system, including transit, roadway, bicycle, and pedestrian facilities were adequately addressed in the Housing Element Update FEIR, and effects peculiar to the proposed project would not occur. Thus, the proposed project would not require further CEQA review for this topic.

**b) Vehicle Miles Traveled**

Would the project: *Would the project conflict or be inconsistent with CEQA Guidelines Section 15064.3, subdivision (b)?*

**Summary of Housing Element Update FEIR**

The Housing Element Update FEIR indicated that development consistent with the Housing Element Update is estimated to reduce the home-based VMT per resident, from 24.6 without implementation of the Housing Element Update, to 22.3 VMT with implementation of the Housing Element Update in 2040. This reduction would not be sufficient to comply with the threshold of significance of 15.0 VMT per resident (i.e., 15 percent below the Alameda County 2040 No Project Average home-based VMT per capita).

Although development consistent with the Housing Element Update as a whole would result in a reduction of home-based average VMT per resident, almost all of the sites are above the threshold of significance (see Housing Element Update Draft EIR Tables 3.14-2 and 3.14-3).

Development consistent with the Housing Element Update would reduce the VMT per service population for the potential sites for housing by about 17 percent, from 36.9 to 30.5; however, resulting VMT per resident of 30.5 is still above the threshold of significance of 22.0 VMT per resident, indicating a significant impact related to VMT (see Housing Element Update Draft EIR Table 3.14-4).

The Housing Element Update FEIR concluded that implementation of MM TRANS-2 would be required, which requires individual housing project development proposals that do not screen out from a VMT impact analysis to provide a quantitative VMT analysis using the same methodology employed in the Housing Element Update Draft EIR, with modifications as necessary (e.g., to account for project-specific information and/or to reflect future updates to the Alameda Countywide Travel Demand [Alameda CTC] Model and/or other methodology acceptable to the City). If the results of the analysis indicate that the VMT associated with an individual housing project would be above the threshold, that development would be required to implement Transportation Demand Management (TDM) measures and physical measures to reduce VMT. (Note that the measures are not additive and combining the measures reduces their overall effectiveness resulting in a limit on the reduction in VMT that these measures can provide).

The Housing Element Update FEIR concluded because the effectiveness of the VMT reduction measures in reducing an individual development project's

VMT impact to a less than significant level could not be confirmed at the programmatic level, the impact would remain significant and unavoidable.

### **Proposed Project Analysis and Conclusion**

As discussed above, the 2040 project VMT threshold of significance for residential developments in the City of Pleasanton is 15 percent below the Alameda County average home-based VMT per resident (17.6 miles per resident). The threshold for the project is therefore 85 percent of the threshold, or 15.0 miles per resident. The home-based VMT per capita identified in Housing Element Update FEIR shows that the 2040 VMT per capita is 39.9 in the traffic analysis zone (TAZ) in which the project site is located.

According to the Traffic Memo, because the proposed project includes fewer units than the maximum units analyzed in the Housing Element Update FEIR (27 units versus 28 units), the proposed project would not result in a VMT per capita higher than what was previously analyzed in the Housing Element Update FEIR. However, because the VMT metric used in the Housing Element Update FEIR to determine a significant impact is an “average per capita,” the average VMT per capita for a 27-unit project would not be significantly different than the average VMT per capita for 28 units. Therefore, the Housing Element Update FEIR’s reported 39.9 average VMT per capita from the project site would also apply to the proposed project. In addition, the trip generation rates estimated by the Traffic Memo included rates based on single-family detached housing and multi-family detached housing to accommodate the proposed units and ADUs, respectively. A detailed assessment of project VMT using the Alameda County Transportation Commission (CTC) VMT Reduction Calculator Tool is included as Appendix A to the Traffic Memo.

In general, the project is designed to include two VMT reduction measures as identified by the Traffic Memo: Measure 3D, which provides a 0.1 percent VMT reduction for providing bike parking, and Measure 4B, which provides a 1.3 percent VMT reduction for sidewalk construction along the project frontage. Based on project design, including implementation of the foregoing measures, the project VMT per capita would be reduced from 39.9 to 39.3, which would still exceed the 15.0 VMT per capita threshold of significance.

However, the significant impact was identified in the Housing Element Update FEIR, which concluded that impacts related to VMT would be significant and unavoidable with mitigation. The incorporation of two VMT

reduction measures into project design would comply with Housing Element Update FEIR Mitigation Measure TRANS-2, which requires the project to implement VMT reduction measures. Overall, the proposed project would be consistent with the analysis within the Housing Element Update FEIR and would not create new impacts, increase impacts, or include new information of substantial importance.

**c) Roadway Safety Hazards and Emergency Access**

- Would the project:
- c) Substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)? or
  - d) Result in inadequate emergency access?

**Summary of Housing Element Update FEIR**

*Roadway Safety Hazards*

The Housing Element Update FEIR indicated that the programs and policies in the Housing Element Update promote safe design and encourage compatible development. Subsequent projects consistent with the Housing Element Update, including any new associated roadway, bicycle, pedestrian, and transit infrastructure improvements, would be subject to, and designed in accordance with City standards and specifications which would address potential design hazards including sight distance, driveway placement, and signage and striping. Additionally, any new transportation facilities, or improvements to such facilities associated with subsequent projects consistent with the Housing Element Update, would be constructed based on industry design standards and best practices consistent with the Municipal Code and building design and inspection requirements.

The Housing Element Update FEIR concluded that the City's evaluation of an individual project's access and circulation would incorporate analysis with respect to City standards for vehicular Level of Service (LOS) and queueing, as well as for service to pedestrians, bicyclists, and transit users. Therefore, development consistent with the Housing Element Update would result in a less than significant impact to roadway safety hazards.

*Emergency Access*

The Housing Element Update FEIR indicated that, pursuant to the Subdivision Ordinance, Chapter 19.36, of the Municipal Code, emergency access to the potential sites for housing would be subject to review by the City and responsible emergency service agencies, thus ensuring projects would be

designed to meet all emergency access and design standards. The City also requires the preparation of construction management plans that would minimize temporary obstruction of traffic during site construction.

Additional vehicles associated with development at the potential sites for housing could increase delays for emergency response vehicles during peak commute hours. However, emergency responders maintain response plans which include use of alternate routes, sirens, and other methods to bypass congestion and minimize response times. In addition, California law requires drivers to yield the right-of-way to emergency vehicles and remain stopped until the emergency vehicle passes to ensure the safe and timely passage of emergency vehicles.

Therefore, the Housing Element Update FEIR concluded that adequate emergency access would be provided to the potential sites for housing, and the impact would be less than significant.

**Proposed Project Analysis and Conclusion**

Future developments and roadway improvements would be designed in accordance with City standards and would be subject to all applicable General Plan policies. Compliance with City standards and policies would ensure that future projects would not significantly increase hazards due to design features or incompatible uses, or result in inadequate emergency access.

Project site access would be provided by a new 56-foot-wide connection to Thiessen Street. From the site entrance, 56-foot-wide public streets, labeled in Exhibit 3 as A Street and B Court, would provide access to the residences not fronting existing streets. Of the proposed lots, nine would front onto Manoir Lane, one onto Thiessen Street, and the remaining 17 lots would be served by two new internal streets. All internal roadways would meet the minimum width to accommodate an emergency vehicle.

Given that the proposed project would be consistent with the type of residential development anticipated for the site by the City, buildout of the project site and the potential for associated roadway design hazards has been anticipated by the City and analyzed in the Housing Element Update FEIR. The Traffic Memo notes that the proposed internal streets would provide sufficient turning radius for emergency response vehicles, with the exception of B Court, due to the proposed on-street parking spaces. Although unlikely to occur frequently, in order to avoid blockage of access through the project site by emergency vehicles, the City would require as a Condition of

Approval that the project applicant provide an exhibit showing truck turning templates to the City for review and approval. Such measures would ensure that all roadway/circulation system improvements included in the proposed project would be consistent with applicable City engineering standards.

Based on the above, impacts related to substantially increasing hazards due to design features or incompatible uses were adequately addressed in the Housing Element Update FEIR, and effects peculiar to the proposed project would not occur. Thus, the proposed project would not require further CEQA review for this topic.

### **Conclusion**

With regards to Transportation, the consistency checklist demonstrates that:

1. No peculiar impacts related to the proposed project or its site have been identified.
2. There are no potentially significant off-site and/or cumulative impacts which were not discussed by the Housing Element Update FEIR.
3. No substantial new information has been identified which results in an impact which is more severe than anticipated by the Housing Element Update FEIR.
4. MM TRANS-2 from the Housing Element Update FEIR would be required and would reduce potential impacts to the fullest extent feasible, consistent with the analysis in the Housing Element Update FEIR.

## **Mitigation Measures**

### **Housing Element Update FEIR Mitigation Measures**

Even with incorporation of MM TRANS-2, the City may not achieve the overall VMT threshold reduction level due to uncertainty in the cumulative effectiveness of TDM measures as well as unknowns related to transit service levels, transportation technology, and travel behavior. Moreover, these policies and mitigation measures primarily apply to new developments; existing land uses that have already been approved and are under construction are generally not affected. Because of the programmatic nature of the Housing Element Update, no additional cumulative mitigation measures are available. Accordingly, the City adopted a Statement of Overriding Considerations.

**MM TRANS-2 Implement Vehicle Miles Traveled Reduction Measures**

Prior to the issuance of certificate of occupancy, a project applicant for an individual housing project development proposal that does not screen out from Vehicle Miles Traveled (VMT) impact analysis, as determined by a qualified consultant using the methods applied in this Draft Program EIR, with modifications as deemed appropriate by the City (e.g., to account for project-specific information and/or to reflect future updates to the Alameda Countywide Travel Demand [Alameda CTC] Model and/or other methodologies acceptable to the City), shall provide a VMT analysis using the methods applied in this Draft Program EIR, with modifications as deemed appropriate by the City (e.g., to account for project-specific information and/or to reflect future updates to the Alameda CTC Model and/or other methodologies acceptable to the City), and reduce VMT impacts to less than the applicable VMT thresholds, to the extent feasible.

**Mitigation Measures for the Proposed Project**

Implement MM TRANS-2. As discussed above, the current project design implements MM TRANS-2.

Environmental Issue Area	Housing Element Update FEIR Determination	Effect Peculiar to Project or Site?	New Significant Effect?	New Significant Off-site, Cumulative Impact?	New Information, More Severe Adverse Impact?

**a-c) Water, Wastewater, Stormwater, Electric Power, Natural Gas, and Telecommunications; Water Supply; Wastewater Treatment Capacity**

- Would the project:
- a) *Require or result in the relocation or construction of new or expanded water, wastewater treatment or stormwater drainage, electric power, natural gas, or telecommunications facilities, the construction or relocation of which could cause significant environmental effects? or*
  - b) *Have sufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry and multiple dry years? or*
  - c) *Result in a determination by the wastewater treatment provider which serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments?*

**Summary of Housing Element Update FEIR**

*Water-Infrastructure Construction, Expansion, or Relocation*

The Housing Element Update FEIR indicated that while development facilitated by the Housing Element Update would require extension, relocation, and expansion of new water lines within and to the potential sites for rezoning and the Dublin-Pleasanton BART station property, construction activities associated with future development would be subject to compliance with the applicable local, State, and federal laws, ordinances,

and regulations, as well as any project-specific mitigation measures necessary to ensure construction-related impacts are not significant.

Future development would be required to uphold the goals and objectives of the General Plan and CAP 2.0 related to water facilities to ensure the adequate water treatment and distribution systems are planned for, concurrent with projected growth. Project proponents would be required to fund their fair share of upgrading the utility infrastructure as needed to serve a project. This may include installing water mains, new water meters, and/or upgrades to existing facilities. The City would review individual development projects at the time of application to establish requirements for funding any infrastructure improvements necessary to mitigate project-specific impacts that have not been previously identified as part of a capital improvement program covered by development impact fees or connection fees. Consistent with applicable State law, the City's development fees would ensure that the developers pay the cost attributable to the increased demand for the affected public facilities reasonably related to the development project to maintain the existing LOS and achieve an adopted LOS that is consistent with the General Plan and Municipal Code (California Government Code Section 66001 (g)). Therefore, the Housing Element Update FEIR concluded impacts due to the extension, relocation, and expansion of new water facilities would be less than significant.

#### *Wastewater*

The Housing Element Update FEIR indicated that that there is sufficient capacity at the Regional Wastewater Treatment Facility (RWTF) and the Dublin San Ramon Service District (DSRSD) plant to accommodate wastewater collection and treatment generated by future development.

The Housing Element Update FEIR also indicated that future development consistent with the Housing Element Update would be located within the urban framework of the City and near existing wastewater infrastructure. The City currently complies with the statutory requirements, as applicable (see Section 3.15, Utilities and Service Systems, "Regulatory Framework" in the Housing Element Update Draft EIR) including goals, programs, and policies in the General Plan and Title 15 of the Municipal Code, and those requirements ensure that the City would continue to comply with State and federal regulatory requirements related to wastewater. All new development would be required to pay a fair share of the City's planned sewer system improvements through connection fees and capital facility fees. Therefore, the Housing Element Update FEIR concluded that development consistent

with the Housing Element Update would not result in insufficient wastewater collection and treatment and no new or expanded wastewater treatment facilities would be needed, and impacts would be less than significant.

#### *Stormwater Drainage Capacity*

The Housing Element Update FEIR indicated that development projects creating or replacing over 2,500 square feet of impervious surface would require satisfaction of the City's Stormwater Requirements Checklist, which would ensure the implementation of regulated stormwater infrastructure. The General Plan Chapter 8, Water Element, includes requirements for stormwater facilities. Goal 6 requires projects to minimize stormwater runoff and provide adequate stormwater facilities to protect property from flooding. Policy 8 ensures an adequate storm drainage system to serve existing and future development. Specifically, Program 8.4 requires the installation of on-site storm drainage infrastructure that would improve local storm drainage systems to accept appropriate design-year flows, as determined by the City Engineer. Additional policies require reduction of stormwater runoff and maximizing infiltration of naturally occurring rainwater to improve surface and subsurface water quality, minimize impervious surfaces, and implement stormwater runoff requirements. In addition, development consistent with the Housing Element Update would be required to pay a fair share of the City's storm drainage improvement costs. Compliance with City requirements and policies would ensure that runoff would not inundate downstream storm drainage facilities such that new or expanded facilities would be required. Therefore, the Housing Element Update FEIR concluded impacts would be less than significant.

#### *Electric Power, Natural Gas, and Telecommunications*

The Housing Element Update FEIR indicated that future development consistent with the Housing Element Update would be located within the urban framework of the City and near existing infrastructure. The CAP 2.0 includes strategies that would reduce the electricity and natural gas consumption for development projects consistent with the Housing Element Update. Because implementation of the Housing Element Update would not result in unplanned growth. As such, the utility providers take into consideration all future growth projections in their planning efforts, and development consistent with the Housing Element Update would not be expected to require or result in new or expanded electricity, natural gas, or telecommunications facilities beyond those already planned. Necessary

extensions and/or upgrades would generally occur within existing utility easements.

In summary, the Housing Element Update FEIR concluded that development consistent with the Housing Element Update would not require or result in the relocation or construction of new or expanded water, wastewater treatment or stormwater drainage, electric power, natural gas, or telecommunications facilities, the construction or relocation of which could cause significant environmental effects. Impacts would be less than significant.

#### *Water Supply*

The Housing Element Update FEIR indicated that a significant impact would occur if sufficient water supplies are not available to serve development consistent with the Housing Element Update and reasonably foreseeable future development during normal, dry, and multiple dry years.

With all groundwater wells online, the water demand projections associated with development consistent with the Housing Element Update fall within the City's total water demand projects for all years. However, at the time of certification of the Housing Element Update FEIR, all of the City's groundwater supply wells had been taken out of commission because of polyfluoroalkyl substances (PFAS) contamination, representing approximately 20 percent of the total water supply for the City. As a result, the Housing Element Update FEIR concluded that unless the supply is either replaced or restored, there would be a significant projected water supply deficiency for all years analyzed, with a projected deficiency ranging from approximately 12 percent to approximately 25 percent. Without the groundwater supply, there would not be enough water available to accommodate development anticipated by the Housing Element Update unless alternative water supplies are identified.

Because the City was still evaluating options for additional water and had not confirmed additional supplies at the time of certification of the Housing Element Update FEIR, the potential water supply deficiency was considered significant and unavoidable.

The Housing Element Update FEIR noted that the analysis reflected a conservative approach, and likely overreported the deficit; nevertheless, because supply replacement options have not been confirmed and a final decision has not been made to replace the groundwater supply, the Housing Element Update FEIR concluded that the City's projected water supply

would not be sufficient to accommodate development consistent with the Housing Element Update, and that no mitigation is available that could, with certainty, reduce impacts to a less than significant level. Therefore, this impact would remain significant and unavoidable.

#### *Wastewater Treatment Capacity*

The Housing Element Update FEIR indicated that the 2.17 mgd of wastewater generated by new development consistent with the Housing Element Update would represent less than 5 percent of total treatment capacity of the RWTF and DSRSD, and the RWTF and DSRSD would have the capacity to handle the increase in wastewater.

The City has entered into numerous sewage reservation agreements that guarantee capacity to various properties/projects. Most approved, but not yet constructed, commercial/office development utilize capacity the City has “reserved” for them out of its original sewage treatment plant and wastewater discharge capacities. Because the City has secured both treatment plant and export capacity by agreement with the Dublin-San Ramon Services District and its participation in the Livermore-Amador Valley Water Management Agency (LAVWMA) Expansion Project, sewage treatment and disposal capacity would not be a constraint in the short- or mid-term. Therefore, the City has secured capacity for its continued existing and future wastewater flows. In addition, the City’s capacity in the discharge pipeline would allow growth in dry-weather flows, as well as accommodate its wet-weather flows for many future years.<sup>26,27</sup> Since preparation of the Housing Element Update FEIR, the City adopted an updated Sewer Capacity Evaluation Report to summarize the development of the hydraulic model for the City’s sanitary sewer system and describe the capacity improvement projects to be included in the City’s upcoming Capital Improvement Program.<sup>28</sup> The report did not predict capacity issues under existing or future peak dry weather flow conditions, and formerly identified capacity deficiencies associated with existing peak wet weather flows were addressed.

Development consistent with the Housing Element Update would be required to comply with the policies and actions of the General Plan regarding wastewater. New development would also be subject to the latest adopted edition of the California Plumbing Code and CALGreen Code including the

---

<sup>26</sup> City of Pleasanton. 2019. Sewer System Management Plan. December.

<sup>27</sup> City of Pleasanton. 2009. Pleasanton General Plan 2005-2025. Section 8—Water Element. July

<sup>28</sup> Woodard and Curran. *Sewer Capacity Evaluation Report*. November 2024.

provisions for water efficient fixtures and toilets. All new development is required to pay its fair share of the City's planned sewer system improvements including treatment, distribution, reuse, and export facilities.

The Sanitary Sewer Master Plan is audited bi-annually and updated every 5 years. These updates allow for the consideration of development and redevelopment such as would occur consistent with the Housing Element Update. As such, the potential for increased wastewater generation and its need for transmission has been and would continue to be planned for by the City. Furthermore, existing and future collection systems and treatment plants would comply with federal, State, and local regulations regulating wastewater collection and discharge. Therefore, the Housing Element Update FEIR concluded that while development consistent with the Housing Element Update would result in an increase in the demand for wastewater collection and treatment, the wastewater collection systems and treatment plants have sufficient capacity to support new development within the service area and the City's sewer connection fees would ensure impacts are less than significant.

#### **Proposed Project Analysis and Conclusion**

Brief discussions of the water, wastewater, stormwater drainage, electrical, and telecommunications facilities that would serve the proposed project are included below.

##### *Water*

Water supplies for the City are provided by the Zone 7 Water Agency. Approximately 75 percent of the water supplied by the Zone 7 Water Agency is surface water from the State Water Project. According to the City's General Plan EIR, the Zone 7 Water Agency has adopted a Water Supply Reliability Policy to maintain the ability to meet 100 percent of Zone 7's estimate for treated water demands 100 percent of the time.

The proposed project would be provided water service by the City through connections to the existing 12-inch water main in Thiessen Street and the existing eight-inch water line in Old Vineyard Avenue. New eight-inch water lines would be installed within the new internal roadways to provide service to each of the proposed residential buildings. According to the Housing Element Update FEIR, construction activities associated with future development, such as the proposed project, would be subject to compliance with the applicable local, State, and federal laws, ordinances, and regulations. For example, the proposed project would be required to

pay City and Zone 7 Water Agency water connection fees pursuant to General Plan Water Element Program 4.1, which would contribute towards offsetting the cost of installing new water infrastructure connections. Therefore, construction of the proposed water conveyance infrastructure would not result in any peculiar effects that would require further CEQA review for this topic.

Given that the proposed project is consistent with the type of residential development anticipated for the site by the City, the type and intensity of growth that would be induced by the proposed project was generally considered and analyzed in the Housing Element Update FEIR. Therefore, the water demand associated with the proposed project was also anticipated by the Housing Element Update FEIR, which concluded impacts related to water supply to be significant and unavoidable. Nonetheless, because the proposed project would be consistent with the analysis within the Housing Element Update FEIR, development of the project would not create new impacts, increase impacts, or present new information of substantial importance.

#### *Wastewater*

The City of Pleasanton provides sewage collection and local pumping services within the City limits. The City's collection system, which consists of over 250 miles of local and trunk sewer pipes, as well as 10 sewer lift stations, moves the City's wastewater to the Dublin-San Ramon Services District (DSRSD) Wastewater Treatment Plant (WWTP). The City of Pleasanton is entitled to half, or 8.5 million gallons per day (mgd), of the DSRSD WWTP's 17 mgd capacity.

The proposed project would connect to the existing eight-inch sewer mains in Thiessen Street and Manoir Lane. New eight-inch sewer lines would be installed within the new internal roadways to provide service to each of the proposed residential buildings. Pursuant to Program 5.1 of the General Plan, the proposed project would be required to pay a fair share of the City's planned sewer system improvements through the payment of City and DSRSD sewer connection fees, including treatment and distribution. In addition, given that the proposed project is consistent with the type of development anticipated for the site, the type and intensity of growth that would be induced by the proposed project was generally considered by the City and associated wastewater demand has been analyzed in the Housing Element Update FEIR. Therefore, the proposed project would not generate

wastewater flows beyond the capacity of existing wastewater treatment facilities or planned future improvements to such facilities.

#### *Stormwater*

Issues related to stormwater infrastructure are discussed in Section X, Hydrology and Water Quality, of this Consistency Checklist. As noted therein, the proposed project would not significantly increase stormwater flows into the City's existing system. The final drainage system design for the project would be subject to review and approval by the City to confirm that the proposed drainage system for the project is consistent with the City's storm drain design standards, which follow standards published by Alameda County Flood Control and Water Conservation District, as well as with all other applicable federal, State, and local regulations. In addition, the proposed project would be required to pay the Impervious Surface Fee to the Zone 7 Water Agency. Therefore, the proposed project would not require or result in the construction of new stormwater drainage facilities or expansion of existing facilities, the construction of which could cause significant environmental effects.

#### *Electric Power, Natural Gas, and Telecommunications*

Electricity and natural gas services for the proposed project would be supplied by PG&E, while telephone services would be provided through AT&T and cable television services would be provided by Comcast. Such services would be provided by way of existing infrastructure in the project vicinity and on-site connections. The proposed project would not require major upgrades to, or extension of, existing infrastructure. Thus, impacts to electricity, natural gas, and telecommunications infrastructure would be less than significant.

#### *Conclusion*

Based on the above, and because the proposed project would be required to pay all applicable connection fees, impacts related to the relocation or construction of new or expanded water, wastewater treatment, or storm water drainage, electric power, natural gas, or telecommunications facilities, the construction or relocation of which could cause significant environmental effects, as well as impacts related to sufficient water supplies being available to serve the project and reasonably foreseeable future development, and the availability of adequate capacity to serve the wastewater demand projected for the proposed project in addition to the City's existing commitments, were adequately addressed in the Housing Element Update

FEIR, and the proposed project would not result in any peculiar effects that would require further CEQA review related to such.

**d,e) Solid Waste Reduction Goals and Regulations Consistency**

- Would the project:
- d) *Generate solid waste in excess of State or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals? or*
  - e) *Comply with federal, State, and local management and reduction statutes and regulations related to solid waste?*

**Summary of Housing Element Update FEIR**

The Housing Element Update FEIR indicated that the solid waste generated by development consistent with the Housing Element Update would represent less than .05 percent of the Vasco Road Landfill's remaining capacity.

Compliance with General Plan policies and programs, as well as CAP 2.0 strategies, would reduce the generation of solid waste. Additionally, construction and demolition debris from new development would be required to be recycled (Municipal Code Chapter 9.21) and organics waste reduced or recycled (Municipal Code Chapter 9.23). Statewide ordinances, including AB 341, AB 939, and SB 1016 require waste reduction, recycling, and diversion and would also be applicable to future development. Construction waste would be temporary and would be required to be diverted from landfills in accordance with Municipal Code Chapter 9.21, and a Waste Management Plan must include waste diversion data for a construction project.

The Housing Element Update FEIR concluded that there is sufficient permitted capacity at the Vasco Road Landfill to accommodate the solid waste generated by development consistent with the Housing Element Update. Furthermore, as previously discussed, all future development consistent with the Housing Element Update would be required to abide by and be consistent with federal, State, and local statutes and regulations related to solid waste, including the California Health and Safety Code, California Code of Regulations, California Public Resources Code, General Plan, and Municipal Code. Therefore, impacts would be less than significant.

**Proposed Project Analysis and Conclusion**

The Pleasanton Garbage Service provides solid waste and recycling services to the businesses and residents of the City. The Pleasanton Garbage Service

has contracted with Browning Ferris Industries for disposal at the Vasco Road Sanitary Landfill in Livermore, California. Pursuant to the Landfill's current Solid Waste Facility Permit, the Landfill has a maximum permitted tonnage limit of 2,518 tons per day and a design capacity of 40,207,100 cubic yards, with remaining capacity of 11,560,000 cubic yards.<sup>29</sup>

The proposed residences would involve the generation of typical solid waste types and would not require specialized solid waste disposal needs. Because the proposed project is consistent with the type of development anticipated for the site within the Housing Element Update, construction and operation of the proposed project would not result in increased solid waste generation beyond what has been previously anticipated for the site by the City and analyzed in the Housing Element Update FEIR. In addition, during project construction, as required by CBSC Section 4.408 and Chapter 9.21, Construction and Demolition Debris, of the City's Municipal Code, the proposed project would be required to submit a WMP to the City detailing on-site sorting of construction debris. Implementation of the WMP would ensure that the proposed project meets established diversion requirements for reused or recycled construction waste.

Therefore, the proposed project would not generate solid waste in excess of State or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals and would comply with federal, State, and local management and reduction statutes and regulations related to solid waste. Thus, impacts related to solid waste were adequately addressed in the Housing Element Update FEIR, and the proposed project would not result in any peculiar effects that would require further CEQA review related to such.

## Conclusion

With regards to Utilities and Service Systems, the consistency checklist demonstrates that:

1. No peculiar impacts related to the proposed project or its site have been identified.
2. There are no potentially significant off-site and/or cumulative impacts which were not discussed by the Housing Element Update FEIR.

---

<sup>29</sup> California Department of Resources Recycling and Recovery (CalRecycle). *Facility/Site Summary Details: Vasco Road Sanitary Landfill (01-AA-0010)*. Available at: <https://www2.calrecycle.ca.gov/SolidWaste/SiteActivity/Details/9?siteID=8>. Accessed January 2025.

3. No substantial new information has been identified which results in an impact which is more severe than anticipated by the Housing Element Update FEIR.
4. The proposed project's impacts are consistent with previously identified significant and unavoidable impacts and, consistent with the Housing Element Update FEIR, no feasible mitigation is available.]

## **Mitigation Measures**

None available.

Development consistent with the Housing Element Update would result in a significant unavoidable impact with respect to water supply and the Housing Element Update's incremental contribution to the cumulative impact is significant. Accordingly, in certifying the Housing Element Update FEIR, the City made findings that there is no available feasible mitigation and impacts would be significant and unavoidable. Accordingly, the City adopted a Statement of Overriding Considerations.

Environmental Issue Area	Housing Element Update FEIR Determination	Effect Peculiar to Project or Site	New Significant Effect	New Significant Off-site Cumulative Impact?	New Information, More Severe Adverse Impact?
<p><b>XIX. Wildfire</b>  <i>If located in or near State Responsibility Areas or lands classified as very high fire hazard severity zones, would the project:</i></p>

Environmental Issue Area	Housing Element Update FEIR Determination	Effect Peculiar to Project or Site	New Significant Effect	New Significant Off-site Cumulative Impact?	New Information, More Severe Adverse Impact?
flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes?					

**a) Emergency Response/Evacuation Plan Consistency**

Would the project: *If located in or near State Responsibility Areas or lands classified as very high fire hazard severity zones, substantially impair an adopted emergency response plan or emergency evacuation plan?*

**Summary of Housing Element Update FEIR**

The Housing Element Update FEIR indicated that portions of the Planning Area and Sites 1 (Lester) and 22 (Merritt) are within an SRA or a Very High FHSZ in a local, State, or Federal Responsibility Area (FRA) (See Exhibit 3.8-3 in the Housing Element Update Draft EIR). Therefore, development consistent with the Housing Element Update could result in new residential units within an SRA or VHFHSZ. Therefore, development consistent with the Housing Element Update could affect adopted emergency response plans or emergency evacuation plans.

During construction, projects would be required to comply with applicable regulations regarding circulation. As determined by the City, larger projects could be required to prepare and implement a construction traffic control/traffic management plan to ensure adequate traffic flow and to keep key routes open during construction. In addition, individual projects would be required to pay all applicable local and regional transportation impact fees to fund the construction of planned roadway improvements in the area as determined at the time of application. As most of the development consistent with the Housing Element Update would occur as redevelopment within the urbanized areas of the City, outside of an SRA, at operation, the development consistent with the Housing Element Update would not materially overburden any designated evacuation routes nor substantially impair any emergency response plans or emergency evacuation plans.

Development consistent with the Housing Element Update, including potential development within the SRA on Sites 1 (Lester) and 22 (Merritt), would not impair an adopted emergency response plan or emergency evacuation plan during construction or operation because policies and programs contained within the General Plan establish requirements for preventive measures and practices to minimize wildland fire hazards and maintain adequate evacuation and access routes for vehicles in the event of an emergency. Development consistent with the Housing Element Update would require continued implementation of the Tri-Valley LHMP, the Comprehensive Emergency Management Plan, and Chapters 19.36 and 20.24 of the Municipal Code, and the California Fire Code. LPFD would be included in the development review process, so the City ensures adequate emergency vehicle access and ensures that development is designed and operated in a manner that minimizes fire hazards and maximizes the potential for responsive emergency services.

Accordingly, the Housing Element Update FEIR concluded that compliance with applicable federal, state, and local policies, as well as review of all new structures by the Police and Fire Departments to ensure adequate emergency access, would ensure that impacts are less than significant.

#### **Proposed Project Analysis and Conclusion**

According to the CALFIRE Fire and Resource Assessment Program, the project site is not located within an SRA or a Very High FHSZ.<sup>30</sup> The nearest High or Very High FHSZ as determined by CALFIRE is located approximately 0.32-mile to the south, and the project site is separated from such areas by existing urban development and roadways, which serves as a fire break to the project site. Because the project site is not located within an SRA or Very High FHSZ, impacts related to impairing an adopted emergency response plan or emergency evacuation plan within such areas would be less than significant, consistent with the analysis in the Housing Element Update FEIR.

#### **b) Expose Project Occupants to Pollutant Concentrations from Wildfire**

Would the project: *If located in or near State Responsibility Areas or lands classified as very high fire hazard severity zones, due to slope, prevailing winds, and other factors, exacerbate wildfire risks, and thereby expose project occupants to, pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire?*

---

<sup>30</sup> California Department of Forestry and Fire Protection. *Fire Hazard Severity Zone Viewer*. Available at: <https://egis.fire.ca.gov/FHSZ/>. Accessed January 2025.

**Summary of Housing Element Update FEIR**

The Housing Element Update FEIR indicated that new development in areas identified as VHFHSZ could expose people or structures to wildfire spread. Most of the Planning Area is not located in a VHFHSZ LRA or SRA. Therefore, for many of the potential sites for housing, the degree of wildfire hazard, including the exposure of future occupants to pollutant concentrations from a wildfire or the uncontrolled spread of wildfire due to slope or prevailing winds, would not substantially increase with adoption of the Housing Element Update, and current hazards would not significantly increase.

As shown in Exhibit 3.8-3 in the Housing Element Update Draft EIR, several of the potential sites for rezoning are within fire hazard severity zones:

- Site 1 (Lester) – the entire site is within a high FHSZ SRA
- Site 2 (Stoneridge Mall) – a small area in the southwestern portion is located within a moderate and high Fire Hazard Severity Zone (FHSZ) Local Responsibility Area (LRA)
- Site 21a and 21b (Kiewit) – the land to the north is designated as a moderate FHSZ LRA
- Site 22 (Merritt) – the southern portion is within a moderate FHSZ with the easternmost portion of the site mapped as a Very High FHSZ SRA
- Site 23 (Sunol Boulevard) is within a high FHSZ LRA to the west
- Site 26 (St. Augustine) – most of the site is within a moderate FHSZ LRA
- Site 27 (PUSD-Vineyard) is within a high FHSZ LRA

If a fire were to occur in the more flat and urbanized areas of the City, the risk of the fire spreading rapidly would be less than in areas with steeper slopes. Of the sites located in moderate or high FHSZ, Site 1 (Lester) and Site 22 (Merritt) are the only potential sites for housing adjacent to slopes. Additionally, Site 1 (Lester), Site 22 (Merritt), and Site 27 (PUSD-Vineyard) are in Special Fire Protection Areas as designated by the General Plan.

All future development consistent with the Housing Element Update would be conditioned to require compliance with the City, County, and the LPPD plans, policies, actions, and ordinances in place to reduce the risks associated with wildfires. All new development would be required to comply with applicable General Plan policies. Additionally, the Vineyard Avenue Corridor Specific Plan provides development standards and design guidelines, including siting of development and use of fire breaks, vegetation, and open space management, that would reduce fire threat to structures and occupants. Further, the LPPD reviews architectural and development plans to ensure that new development projects meet fire protection and emergency access requirements in accordance with

Chapter 20.24 of the Municipal Code, which implements the California Fire Code on a local level. In addition, Chapter 20.08, Chapter 20.10, Chapter 20.32, and Chapter 20.24, Fire Code (which adopted the California Fire Code) of the Municipal Code will be reviewed when development applications are received. The Tri-Valley LHMP provides recommendations that have been identified for the Tri-Valley area, which would assist in reducing wildfire risk for development consistent with the Housing Element Update.

Future projects would be required to comply with fire protection measures as codified within the policies and programs within the General Plan and the Municipal Code. Further, continued implementation of the Tri-Valley LHMP and review of architectural and development plans by the LFPD would assist in protecting life and property in the event of a wildfire. The Housing Element Update FEIR concluded that the degree of wildland fire hazard would not substantially change with adoption of the Housing Element Update, and current hazards would not be significantly increased. Therefore, impacts would be less than significant.

#### **Proposed Project Analysis and Conclusion**

As discussed above, the project site is located by the General Plan as within a Special Fire Protection Area. Policy 13 of the Housing Element Update Draft EIR and the associated programs require developments within Special Fire Protection Areas to provide effective fire prevention measures, such as fire detection, alarm, and sprinkler equipment. As discussed above, the proposed project would be required to comply with all applicable requirements of the California Fire Code as adopted by Section 20.24.010 of the City's Municipal Code, including installation of fire sprinkler systems. In addition, the project site is located 0.42-mile northwest from the nearest fire station, Station 5. The proposed project would also be required to comply with fire safety standards included within the Vineyard Avenue Corridor Specific Plan, such as Program 13.5 requiring fire resistance in roof coverings and Program 13.8, requiring green areas adjacent to unmaintained open space areas (e.g., the park acreage located between the proposed buildings and the open space to the north). Therefore, impacts related to pollutant risks from wildfire were adequately addressed in the Housing Element Update FEIR, and the site would not be subject to any peculiar hazards related to such.

**c, d) Infrastructure that Exacerbates Fire Risk; Flooding and Landslide Hazards Due To Post-fire Slope Instability/Drainage Changes**

- Would the project:
- c) *If located in or near State Responsibility Areas or lands classified as very high fire hazard severity zones, require the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines or other utilities) that may exacerbate fire risk or that may result in temporary or ongoing impacts to the environment? or*
  - d) *If located in or near State Responsibility Areas or lands classified as very high fire hazard severity zones, expose people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes?*

**Summary of Housing Element Update FEIR**

As noted under Impact XIX (a) above, most of the City is not located in a VHFHSZ LRA or SRA. Therefore, the degree of wildland fire hazard, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes, would not substantially change with adoption of the Housing Element Update, and current hazards would not significantly increase.

As described under Impact XIX(b) above, the Housing Element Update FEIR indicated new development in the areas identified as VHFHSZ could expose people or structures to wildfire spread. All future development on the potential sites for housing would be subject to the rules and regulations of the Municipal Code and the General Plan regarding development on unstable geologic soils and controlling stormwater runoff during and after construction. The programs also require developments to include design features and mitigation to reduce damage associated with seismic-related ground failure and the establishment of Geologic Hazard Abatement Districts (GHADs) to ensure ongoing monitoring and maintenance of slopes and drainage facilities occur. Combined with the review of architectural and development plans by the LPPD, these policies provide additional proactive measures to refine and enhance the resiliency of the City, as well as strengthening the City's review of new applications for development to ensure that potential exposure to secondary wildland fire hazards are not exacerbated. Thus, the Housing Element Update FEIR concluded that impacts would be less than significant.

The Housing Element Update FEIR also indicated that new development in the areas identified as VHFHSZ could expose people or structures to wildfire

spread. As described in Impact XIX(b) above, most of the Planning Area is not located in a VHFHSZ LRA or SRA (see also Exhibit 3.8-3 in the Housing Element Update Draft EIR).

Most development consistent with the Housing Element Update is expected to occur in urbanized and developed areas where existing infrastructure (including utilities, highways, and roadways) are already in place. The Housing Element Update would retain the existing roadway patterns.

The LPPD would review the installation and maintenance of fire department access roadways, access walkways to and around buildings, and hydrant quantity and placement as required by the California Fire Code and California Building Standards Code (CBC). Compliance with the CBC and General Plan policies and programs, as well as review of all new structures by the LPPD, would ensure that fire risks are not exacerbated. As the City receives development applications for subsequent development consistent the Housing Element Update, those applications would be reviewed by the City for compliance with the fire protection measures identified in the General Plan, the California Fire Code, and the California Public Resources Code to ensure that fire risks are not exacerbated.

As such, the Housing Element Update FEIR concluded that the Housing Element Update does not propose the installation and maintenance of any new infrastructure that would substantially exacerbate fire risk, and impacts would be less than significant.

#### **Proposed Project Analysis and Conclusion**

The project area does not include any existing features that would substantially increase fire risk for future residents, workers, or visitors. Given that the project site is located within a developed urban area and is situated adjacent to existing roads, water lines, and other utilities, the project would not result in substantial fire risks related to installation or maintenance of such infrastructure. Therefore, impacts related to such risks were adequately addressed in the Housing Element Update FEIR, and the site would not be subject to any peculiar hazards related to infrastructure or changes that exacerbate fire risk.

#### **Conclusion**

With regards to Wildfire, the consistency checklist demonstrates that:

1. No peculiar impacts related to the proposed project or its site have been identified.

2. There are no potentially significant off-site and/or cumulative impacts which were not discussed by the Housing Element Update FEIR.
3. No substantial new information has been identified which results in an impact more severe than anticipated by the Housing Element Update FEIR.
4. No mitigation measures would be required because the proposed project's specific impacts would be less than significant.

### **Mitigation Measures**

None.

Environmental Issue Area	Housing Element Update FEIR Determination	Effect Peculiar to Project or Site?	New Significant Effect?	New Significant Off-site, Cumulative Impact?	New Information, More Severe Adverse Impact?
<b>XX. Mandatory Findings of Significance</b>					
a) Does the project have the potential to substantially degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, substantially reduce the number or restrict the range of a rare or endangered plant or animal, or eliminate important examples of the major periods of California history or prehistory?	Less than significant impact with mitigation incorporated	No	No	No	No
b) Does the project have impacts that are individually limited, but cumulatively considerable? ("Cumulatively considerable" means that the incremental effects of a project are	Significant and unavoidable	No	No	No	No

Environmental Issue Area	Housing Element Update FEIR Determination	Effect Peculiar to Project or Site?	New Significant Effect?	New Significant Off-site, Cumulative Impact?	New Information, More Severe Adverse Impact?
considerable when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects)?					
c) Does the project have environmental effects, which will cause substantial adverse effects on human beings, either directly or indirectly?	Less than significant impact with mitigation incorporated	No	No	No	No

**a) Potential Degradation to Environment and Examples of California History or Prehistory**

Does the project: *Have the potential to substantially degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, substantially reduce the number or restrict the range of a rare or endangered plant or animal, or eliminate important examples of the major periods of California history or prehistory?*

**Summary of Housing Element Update FEIR**

The Housing Element Update FEIR concluded that the development consistent with the Housing Element Update would have less than significant impact on cultural resources with no mitigation needed and less than significant impact on biological resources after the implementation of MM BIO-1.

**Proposed Project Analysis and Conclusion**

As discussed in Section IV, Biological Resources, of this Consistency Checklist, the proposed project would not have the potential to adversely impact special-status plant or wildlife species. In addition, because the project site

does not contain any known historic or prehistoric resources, implementation of the proposed project is not anticipated to have the potential to result in impacts related to historic or prehistoric resources. As conditions of approval, the proposed project would be required to comply with applicable General Plan policies, as well as all applicable State regulations, related to preservation of archaeological resources and human remains if such resources are discovered within the project site during construction activities, consistent with the requirements of CEQA.

Considering the above, the proposed project would not: 1) degrade the quality of the environment; 2) substantially reduce or impact the habitat of fish or wildlife species; 3) cause fish or wildlife populations to drop below self-sustaining levels; 4) threaten to eliminate a plant or animal community; 5) reduce the number or restrict the range of a rare or endangered plant or animal; or 6) eliminate important examples of the major periods of California history or prehistory. Impacts associated with such resources have been adequately addressed and would not change from what was identified in the Housing Element Update FEIR, and the criteria for requiring further CEQA review are not met.

**b) Cumulatively Considerable Impacts**

Does the project: *Have impacts that are individually limited, but cumulatively considerable? ("Cumulatively considerable" means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects)?*

**Summary of Housing Element Update FEIR**

The Housing Element Update FEIR generally considered the greater Tri-Valley area when considering the geographical scope of cumulative impacts and concluded that cumulatively considerable impacts would occur related to VMT and water supply. Development consistent with the Housing Element Update would result in a significant and unavoidable cumulatively considerable contribution to the existing cumulative VMT impact even with mitigation incorporated (MM TRANS-2). With regards to water supply, due to the potential decommissioning of the City's groundwater supply wells, there may not be enough water available to account for past, present, and future development, including development consistent with the Housing Element Update. Therefore, such development would result in a significant and unavoidable cumulatively considerable contribution to water supply impact

and no mitigation is available to reduce impacts to a less than significant level.

#### **Proposed Project Analysis and Conclusion**

Because the project considered herein is a single site, as compared to the multiple sites considered in the Housing Element Update FEIR, the geographical scope for the cumulative consideration of the proposed project is much smaller than that of the Housing Element Update FEIR. Therefore, the potential for cumulative contribution is smaller. Nonetheless, the proposed project would contribute to the VMT and water supply cumulative impacts identified by the Housing Element Update FEIR. However, as indicated herein, the project is within the cumulative scope analyzed in the Housing Element Update FEIR and, therefore, its contributions to the cumulative impacts were analyzed and considered. Because the proposed project is consistent with the analyses of the Housing Element Update FEIR as evidenced herein, it does not have any features that would result in a cumulatively considerable contribution different from what was disclosed and mitigated to the fullest extent possible in the Housing Element Update FEIR. Additionally, the proposed project would be consistent with the analysis contained within the Housing Element Update FEIR with respect to cumulative VMT and water supply impacts because, as discussed above, it would not create new impacts, increase impacts, and there is no new information of substantial importance.

#### **c) Adverse Effects on Human Beings?**

Does the project: *Have environmental effects, which will cause substantial adverse effects on human beings, either directly or indirectly?*

#### **Summary of Housing Element Update FEIR**

The Housing Element Update FEIR indicated that potentially significant impacts would occur related to air quality, hazardous substances, and noise. These impacts could cause substantial adverse effect on human beings. However, the Housing Element Update FEIR included MM AIR-1a and -1b, MM HAZ-2, MM NOI-1 and -2, to ensure such impacts are reduced to less than significant.

#### **Proposed Project Analysis and Conclusion**

As described in this Consistency Checklist, the proposed project would comply with all applicable General Plan policies, Municipal Code standards, other applicable local, County, and State regulations. In addition, as discussed in the Air Quality, Geology and Soils, Hazards and Hazardous

Materials, and Noise sections of this Consistency Checklist, the proposed project would not cause substantial effects to human beings, including effects related to exposure to air pollutants, geologic hazards, hazardous materials, and excessive noise, beyond the effects previously analyzed as part of the General Plan EIR. Therefore, further CEQA review is not required.

## **Mitigation Measures**

### **Housing Element Update FEIR Mitigation Measures**

Implement MM AIR-1a and -1b, MM BIO-1, MM GEO-6, MM HAZ-2, and MM NOI-1 and NOI-2.

### **Mitigation Measures for the Proposed Project**

Implement MM AIR-1a, MM AIR-1b, MM GEO-6, MM NOI-1, and MM NOI-2.

## SECTION 5: FINDINGS

As illustrated in the preceding Consistency Checklist, the proposed project is found to be in conformance with the analysis and conclusions of the Housing Element Update FEIR, the Housing Element Update FEIR adequately anticipated and described the impacts of the proposed project. Consistent with the mandate in the State CEQA Guidelines Section 15183, no further environmental review is required based on the following findings:

1. The proposed project is consistent with the development density established by the General Plan policies for which an EIR was certified on January 26, 2023 (State Clearinghouse No. 2022040091).
2. There are no new significant effects peculiar to the proposed project or its site.
3. There are no new significant effects that were not previously evaluated in the Housing Element Update FEIR.
4. There are no new significant off-site or cumulative impacts that were not analyzed in the Housing Element Update FEIR.
5. There are no adverse impacts that are more severe than those previously identified in the Housing Element Update FEIR.
6. All applicable mitigation measures from the Housing Element Update FEIR have been made a condition of project approval.

### Conclusions

No further action is required, and a Notice of Determination (pursuant to CEQA Guidelines Section 15094) can be filed indicating that the project is eligible for an exemption from additional environmental review under CEQA Guidelines Section 15183.

Cotati, CA 94931  
(707) 794-0400

**I&R Project#: 24-047**

## **Introduction**

The purpose of this report is to address the potential air quality, health risk, and greenhouse gas (GHG) impacts associated with the construction and operation of the proposed residential project located along Vineyard Avenue in Pleasanton, California. Air quality impacts and GHG emissions would be associated with the site preparation and grading of the site, construction of new buildings and infrastructure, and operation of the project. Air pollutant emissions associated with construction of the project were estimated using appropriate computer models. In addition, the potential project health risks and the impact of existing toxic air contaminant (TAC) sources affecting the nearby and proposed sensitive receptors were evaluated. The analysis was conducted following guidance provided by the Bay Area Air Quality Management District (BAAQMD).<sup>1</sup>

## **Project Description**

The 10.64-acre project site is currently an undeveloped open field along Vineyard Avenue between Thiessen Street and Manor Lane. The project proposes to construct 27 single-family homes, each with an attached garage, totaling 129,364 square feet (sf). Also included in the project is a three-acre park that will encompass the northern portion of the project site closest to Vineyard Avenue. Construction is proposed to begin in April 2027 and be completed by April 2028.

## **Setting**

The project is located in Alameda County, which is in the San Francisco Bay Area Air Basin. Ambient air quality standards have been established at both the State and federal level. The Bay Area meets all ambient air quality standards with the exception of ground-level ozone, respirable particulate matter (PM<sub>10</sub>), and fine particulate matter (PM<sub>2.5</sub>).

### Air Pollutants of Concern

High ozone concentrations in the air basin are caused by the cumulative emissions of reactive organic gases (ROG) and nitrogen oxides (NO<sub>x</sub>). These precursor pollutants react under certain meteorological conditions to form ozone concentrations. Controlling the emissions of these precursor pollutants is the focus of the Bay Area's attempts to reduce ambient ozone concentrations. The highest ozone concentrations in the Bay Area occur in the eastern and southern inland valleys that are downwind of air pollutant sources. High ozone concentrations aggravate respiratory and cardiovascular diseases, reduced lung function, and increase coughing and chest discomfort.

Particulate matter is another problematic air pollutant in the air basin. Particulate matter is assessed and measured in terms of respirable particulate matter or particles that have a diameter of 10 micrometers or less (PM<sub>10</sub>) and fine particulate matter where particles have a diameter of 2.5 micrometers or less (PM<sub>2.5</sub>). Elevated concentrations of PM<sub>10</sub> and PM<sub>2.5</sub> are the result of both region-wide (or cumulative) emissions and localized emissions. High particulate matter concentrations aggravate respiratory and cardiovascular diseases, reduce lung function, increase mortality (e.g., lung cancer), and result in reduced lung function growth in children.

---

<sup>1</sup> Bay Area Air Quality Management District, *2022 CEQA Guidelines*, April 2023.

## Toxic Air Contaminants

TACs are a broad class of compounds known to cause morbidity or mortality, often because they cause cancer. TACs are found in ambient air, especially in urban areas, and are caused by industry, agriculture, fuel combustion, and commercial operations (e.g., dry cleaners). TACs are typically found in low concentrations, even near their source (e.g., diesel particulate matter [DPM] near a freeway). Because chronic exposure of TACs can result in adverse health effects, they are regulated at the regional, State, and federal level.

Diesel exhaust is the predominant TAC in urban air and is estimated to represent about three-quarters of the cancer risk from TACs (based on the Bay Area average). According to the California Air Resources Board (CARB), diesel exhaust is a complex mixture of gases, vapors, and fine particles. This complexity makes the evaluation of health effects from diesel exhaust exposure a complex scientific issue. Some of the chemicals in diesel exhaust, such as benzene and formaldehyde, have been previously identified as TACs by the CARB, and are listed as carcinogens either under the State's Proposition 65 or under the Federal Hazardous Air Pollutants programs. Health risks from TACs are estimated using the Office of Environmental Health Hazard Assessment (OEHHA) risk assessment guidelines, which were published in February of 2015 and incorporated in BAAQMD's current CEQA guidance.<sup>2</sup>

## Sensitive Receptors

There are groups of people more affected by air pollution than others. CARB has identified the following persons who are most likely to be affected by air pollution: children under 16, the elderly over 65, athletes, and people with cardiovascular and chronic respiratory diseases. These groups are classified as sensitive receptors. Locations that may contain a high concentration of these sensitive population groups include residential areas, hospitals, daycare facilities, elder care facilities, and elementary schools. For cancer risk assessments, infants and small children are the most sensitive receptors, since they are more susceptible to cancer causing TACs. Residential locations are assumed to include infants and small children. The closest sensitive receptors to the project site are located in the single-family residences to the west, south, and east. There are more receptors at further distances. This project would introduce new sensitive receptors (i.e., residents) to the area.

## **Regulatory Setting**

### Federal Regulations

The United States Environmental Protection Agency (EPA) sets nationwide emission standards for mobile sources, which include on-road (highway) motor vehicles such trucks, buses, and automobiles, and non-road (off-road) vehicles and equipment used in construction, agricultural, industrial, and mining activities (such as bulldozers and loaders). The EPA also sets nationwide

---

<sup>2</sup> OEHHA, 2015. *Air Toxics Hot Spots Program Risk Assessment Guidelines, The Air Toxics Hot Spots Program Guidance Manual for Preparation of Health Risk Assessments*. Office of Environmental Health Hazard Assessment. February.

fuel standards. California also has the ability to set motor vehicle emission standards and standards for fuel used in California, as long as they are the same or more stringent than the federal standards.

In the past decade the EPA has established a number of emission standards for on- and non-road heavy-duty diesel engines used in trucks and other equipment. This was done in part because diesel engines are a significant source of NO<sub>x</sub> and particulate matter (PM<sub>10</sub> and PM<sub>2.5</sub>) and because the EPA has identified DPM as a probable carcinogen. Implementation of the heavy-duty diesel on-road vehicle standards and the non-road diesel engine standards are estimated to reduce particulate matter and NO<sub>x</sub> emissions from diesel engines up to 95 percent in 2030 when the heavy-duty vehicle fleet is completely replaced with newer heavy-duty vehicles that comply with these emission standards.<sup>3</sup>

In concert with the diesel engine emission standards, the EPA has also substantially reduced the amount of sulfur allowed in diesel fuels. The sulfur contained in diesel fuel is a significant contributor to the formation of particulate matter in diesel-fueled engine exhaust. The new standards reduced the amount of sulfur allowed by 97 percent for highway diesel fuel (from 500 parts per million by weight [ppmw] to 15 ppmw), and by 99 percent for off-highway diesel fuel (from about 3,000 ppmw to 15 ppmw). The low sulfur highway fuel (15 ppmw sulfur), also called ultra-low sulfur diesel (ULSD), is currently required for use by all vehicles in the U.S.

All of the above federal diesel engine and diesel fuel requirements have been adopted by California, in some cases with modifications making the requirements more stringent or the implementation dates sooner.

### State Regulations

To address the issue of diesel emissions in the state, CARB developed the Risk Reduction Plan to Reduce Particulate Matter Emissions from Diesel-Fueled Engines and Vehicles.<sup>4</sup> In addition to requiring more stringent emission standards for new on-road and off-road mobile sources and stationary diesel-fueled engines to reduce particulate matter emissions by 90 percent, a significant component of the plan involves application of emission control strategies to existing diesel vehicles and equipment. Many of the measures of the Diesel Risk Reduction Plan have been approved and adopted, including the federal on-road and non-road diesel engine emission standards for new engines, as well as adoption of regulations for low sulfur fuel in California.

CARB has adopted and implemented a number of regulations for stationary and mobile sources to reduce emissions of DPM. Several of these regulatory programs affect medium and heavy-duty diesel trucks that represent the bulk of DPM emissions from California highways. CARB regulations require on-road diesel trucks to be retrofitted with particulate matter controls or replaced to meet 2010 or later engine standards that have much lower DPM and PM<sub>2.5</sub> emissions. This regulation will substantially reduce these emissions between 2013 and 2023. While new trucks and buses will meet strict federal standards, this measure is intended to accelerate the rate

---

<sup>3</sup> USEPA, 2000. *Regulatory Announcement, Heavy-Duty Engine and Vehicle Standards and Highway Diesel Fuel Sulfur Control Requirements*. EPA420-F-00-057. December.

<sup>4</sup> California Air Resources Board, 2000. *Risk Reduction Plan to Reduce Particulate Matter Emissions from Diesel-Fueled Engines and Vehicles*. October.

at which the fleet either turns over so there are more cleaner vehicles on the road or is retrofitted to meet similar standards. With this regulation, older, more polluting trucks would be removed from the roads sooner.

CARB has also adopted and implemented regulations to reduce DPM and NO<sub>x</sub> emissions from in-use (existing) and new off-road heavy-duty diesel vehicles (e.g., loaders, tractors, bulldozers, backhoes, off-highway trucks, etc.). The regulations apply to diesel-powered off-road vehicles with engines 25 horsepower (hp) or greater. The regulations are intended to reduce particulate matter and NO<sub>x</sub> exhaust emissions by requiring owners to turn over their fleet (replace older equipment with newer equipment) or retrofit existing equipment in order to achieve specified fleet-averaged emission rates. Implementation of this regulation, in conjunction with stringent federal off-road equipment engine emission limits for new vehicles, will significantly reduce emissions of DPM and NO<sub>x</sub>.

### Bay Area Air Quality Management District (BAAQMD)

BAAQMD has jurisdiction over an approximately 5,600-square mile area, commonly referred to as the San Francisco Bay Area (Bay Area). The District's boundary encompasses the nine San Francisco Bay Area counties, including Alameda County, Contra Costa County, Marin County, San Francisco County, San Mateo County, Santa Clara County, Napa County, southwestern Solano County, and southern Sonoma County.

BAAQMD is the lead agency in developing plans to address attainment and maintenance of the National Ambient Air Quality Standards and California Ambient Air Quality Standards. The District also has permit authority over most types of stationary equipment utilized for the proposed project. The BAAQMD is responsible for permitting and inspection of stationary sources; enforcement of regulations, including setting fees, levying fines, and enforcement actions; and ensuring that public nuisances are minimized.

BAAQMD's Community Air Risk Evaluation (CARE) program was initiated in 2004 to evaluate and reduce health risks associated with exposures to outdoor TACs in the Bay Area.<sup>5</sup> The program examines TAC emissions from point sources, area sources, and on-road and off-road mobile sources with an emphasis on diesel exhaust, which is a major contributor to airborne health risk in California. The CARE program is an on-going program that encourages community involvement and input. The technical analysis portion of the CARE program has been implemented in three phases that includes an assessment of the sources of TAC emissions, modeling and measurement programs to estimate concentrations of TAC, and an assessment of exposures and health risks. Throughout the program, information derived from the technical analyses has been used to develop emission reduction activities in areas with high TAC exposures and high density of sensitive populations. Risk reduction activities associated with the CARE program are focused on the most at-risk communities in the Bay Area. Seven areas have been identified by BAAQMD as impacted communities. They include Eastern San Francisco, Richmond/San Pablo, Western Alameda, San José, Vallejo, Concord, and Pittsburgh/Antioch. The project site is not located within any of the BAAQMD CARE areas.

---

<sup>5</sup> See BAAQMD: <https://www.baaqmd.gov/community-health/community-health-protection-program/community-air-risk-evaluation-care-program>.

Overburdened communities are areas located (i) within a census tract identified by the California Communities Environmental Health Screening Tool (CalEnviroScreen), Version 4.0 implemented by OEHHA, as having an overall score at or above the 70th percentile, or (ii) within 1,000 feet of any such census tract.<sup>6</sup> The BAAQMD has identified several overburdened areas within its boundaries. However, the project site is not within an overburdened area as the Project site is scored at the 32<sup>nd</sup> percentile on CalEnviroScreen.<sup>7</sup>

### *BAAQMD CEQA Air Quality Guidelines*

In June 2010, BAAQMD adopted thresholds of significance to assist in the review of projects under CEQA. In 2023, the BAAQMD revised the *California Environmental Quality Act (CEQA) Air Quality Guidelines* that include significance thresholds to assist in the evaluation of air quality impacts of projects and plans proposed within the Bay Area. The current BAAQMD guidelines provide recommended procedures for evaluating potential air impacts during the environmental review process consistent with CEQA requirements including thresholds of significance, mitigation measures, and background air quality information. They include assessment methodologies for criteria air pollutants, air toxics, odors, and GHG emissions as shown in Table 1.<sup>8</sup> Air quality impacts and health risks are considered potentially significant if they exceed these thresholds.

The BAAQMD recommends all projects include a “basic” set of best management practices (BMPs) to manage fugitive dust and consider impacts from dust (i.e., fugitive PM<sub>10</sub> and PM<sub>2.5</sub>) to be less than significant if BMPs are implemented (listed below). BAAQMD strongly encourages enhanced BMPs for construction sites near schools, residential areas, other sensitive land uses, or if air quality impacts were found to be significant.

## Draft Program Environmental Impact Report - City of Pleasanton 2023 – 2031 (6<sup>th</sup> Cycle) Housing Element Update

A Draft Program Environmental Impact Report (DEIR) was prepared to evaluate the potential environmental impacts associated with the implementation of the proposed 2023 – 2031 (6<sup>th</sup> Cycle) Housing Element Update, rezonings, and General Plan and Specific Plan Amendments (generally referred to as the Housing Element Update). The purpose of the DEIR is to inform any interested parties of the potential environmental impacts and effects associated with the implementation of the Housing Element Update. It also includes methods by which projects can implement mitigation measures to avoid or minimize specific impacts. The following impacts and mitigation measures are applicable to the proposed project.

**Impact AIR-1:** Development consistent with the Housing Element Update, rezonings, and General Plan and Specific Plan Amendments could conflict with or obstruct implementation of applicable air quality plan.

### **Mitigation Measures:**

**MM AIR-1a:** Prior to the issuance of a grading or building permit, whichever is sooner, the project applicant for a potential site for rezoning shall submit an air quality construction plan detailing the proposed air quality construction measures related to the project such as construction phasing, construction equipment, and dust control measures, and such plan shall be approved by the Director of Community Development. Air quality construction measures shall include Basic Construction Mitigation Measures, as approved by the Bay Area Air Quality Management District (BAAQMD) in 2017, and, where construction-related emissions would exceed the applicable thresholds, Additional Construction Mitigation Measures, as recommended by the BAAQMD, shall be implemented to reduce emissions to acceptable levels. The air quality construction plan shall be included on all grading, utility, building, landscaping, and improvement plans during all phases of construction and for access roads, parking areas, and staging areas at construction sites.

**MM AIR-1b:** For project sites where new sensitive receptors, such as residences, would be located within siting distances recommended by the Bay Area Air Quality Management District (BAAQMD) and California Air Resources Board (ARB), currently published in the ARB Air Quality and Land Use Handbook: A Community Health Perspective, or the latest available guidance as determined by the City of Pleasanton as the lead agency, to sources of Toxic Air Contaminants (TACs), the following measures shall be implemented for development on such sites to reduce exposure to TACs and improve indoor and outdoor air quality:

**Indoor Air Quality** – In accordance with the recommendations of the BAAQMD, appropriate measures (refer to Section 5 of the BAAQMD

CEQA Guidelines) shall be incorporated into building design in order to reduce the potential health risk due to exposure of sensitive receptors to TACs, including, but not limited to:

- a) Locate sensitive receptors as far as possible from freeways, major roadways or other sources of pollution (e.g., loading docs, parking lots);
- b) Incorporate tiered plantings of trees redwood, deodar cedar, live oak, and/or oleander) to the maximum extend feasible between the sources of pollution and sensitive receptors;
- c) Install, operate and maintain in good working order a central heating ventilation and air conditioning (HVAC) system or other air take system in the building, or in each residential unit, that meets or exceeds an efficiency standard of MERV 13, including the following features: installation of high efficiency filter and/or carbon filter to filter particulates and other chemical matter from the building (either HEPA filters or ASHRAE 85 percent supply filters);
- d) Retain a qualified HVAC consultant or Home Energy Rating System (HERS) rater during the design phase of the project to locate the HVAC system based on exposure modeling from pollutant sources;
- e) Install indoor air quality monitoring in units in buildings; and
- f) Applicants shall maintain, repair or replace HVAC systems on an ongoing and as-needed basis, or prepare two operation and maintenance manuals for the HVAC systems and the filters: one manual shall be included in the recorded Conditions Covenants and Restrictions (CC&Rs) and distributed to building maintenance staff; the other manual a separate homeowners' manual with operating instructions and maintenance and replacement schedule for the HVAC system and filters that is distributed to the owners.

Project applicants shall retain a qualified air quality consultant to prepare a health risk assessment (HRA) in accordance with BAAQMD requirements to determine the exposure of project residents/occupants/users to air pollutants prior to PUD approval, issuance of a grading permit, or issuance of a building permit, which is sooner. The HRA shall be submitted to the Community Development Department for review and approval. The applicant shall implement the approved HRA mitigation measure recommendations, if any, in order to reduce exposure to TACs below BAAQMD thresholds of significance at the time of the project approval.

**Outdoor Air Quality** – Individual and common exterior open space, including playgrounds, patios, and decks, shall either be shielded from the source of air pollution by buildings or otherwise buffered to further reduce air pollution for project occupants.

**Impact AIR-2:** Development consistent with the Housing Element Update, rezonings, and General Plan and Specific Plan Amendments could result in a cumulatively considerable net increase of any criteria pollutant for which the project region is nonattainment under an applicable federal or State ambient air quality standard.

**Mitigation Measures:** Implement MM AIR-1a and MM AIR-1b.

**Impact AIR-3:** Development consistent with the Housing Element Update, rezonings, and General Plan and Specific Plan Amendments could expose sensitive receptors to substantial pollutant concentrations.

**Mitigation Measures:** Implement MM AIR-1b.

**Impact AIR-4:** Development consistent with the Housing Element Update, rezonings, and General Plan and Specific Plan Amendments would not result in other emissions (such as those leading to odors) adversely affecting a substantial number of people.

**Mitigation Measures:** No mitigation is necessary.

## AIR QUALITY IMPACTS AND MITIGATION MEASURES

### **Impact AIR-1: Conflict with or obstruct implementation of the applicable air quality plan?**

BAAQMD, with assistance from the Association of Bay Area Governments (ABAG) and Metropolitan Transportation Commission (MTC), implements specific plans to meet the applicable federal and State laws, regulations, and programs. The most recent and comprehensive plan is the *Bay Area 2017 Clean Air Plan*.<sup>9</sup> The primary goals of the Clean Air Plan are to attain air quality standards, reduce population exposure and protect public health, and reduce GHG emissions and protect the climate. The BAAQMD has also recently updated its CEQA guidelines to assist lead agencies in evaluating the significance of air quality impacts. In formulating compliance strategies, BAAQMD relies on planned land uses established by local general plans. Land use planning affects vehicle travel, which in turn affects region-wide emissions of air pollutants and GHGs.

The 2017 Clean Air Plan, adopted by BAAQMD in April 2017, includes control measures that are intended to reduce air pollutant emissions in the Bay Area either directly or indirectly. Plans must show consistency with the control measures listed within the Clean Air Plan. The project is consistent with the General Plan land uses and is included in the *City of Pleasanton 2023 – 2031 (6<sup>th</sup> Cycle) Housing Element Update*. The DEIR for the recent includes mitigation measures that would ensure that certain Clean Air Plan measures are properly implemented so that some projects developed under the Housing Element Update would not have significant air quality impacts.

MM AIR-1a would reduce construction period emissions by requiring individual projects to incorporate Basic Construction Mitigation Measures recommended by BAAQMD or additional construction mitigation measures if the BAAQMD thresholds of significance are exceeded.

MM AIR-1b would be required to ensure that future development would result in less than significant impacts related to exposing sensitive receptors to substantial pollutant concentrations.

The Project is consistent with the Housing Element Update and, therefore, would not conflict with the latest Clean Air planning efforts.

### **Impact AIR-2: Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard?**

The Bay Area is considered a non-attainment area for ground-level O<sub>3</sub> and PM<sub>2.5</sub> under both the NAAQS and the CAAQS. The area is also considered non-attainment for PM<sub>10</sub> under the CAAQS, but not the NAAQS. The area has attained both State and Federal ambient air quality standards for CO. As part of an effort to attain and maintain ambient air quality standards for O<sub>3</sub>, PM<sub>2.5</sub> and PM<sub>10</sub>, the BAAQMD has established thresholds of significance for these air pollutants and their precursors. The O<sub>3</sub> precursor pollutant thresholds are for ROG and NO<sub>x</sub>, while PM<sub>10</sub>, and PM<sub>2.5</sub>

---

<sup>9</sup> Bay Area Air Quality Management District (BAAQMD), 2017. *Final 2017 Clean Air Plan*.

have specific thresholds. The thresholds apply to both construction period emissions and operational period emissions.

### **Construction Period Emissions**

The California Emissions Estimator Model (CalEEMod) Version 2022 was used to estimate emissions from on-site construction activity, construction vehicle trips, and evaporative emissions. The project land use types and size were input to CalEEMod. The CalEEMod model output along with construction inputs are included in *Attachment 1*.

#### CalEEMod Inputs

##### *Land Uses*

The proposed project land uses were entered into CalEEMod as described in Table 2.

**Table 2. Summary of Project Land Use Inputs**

<b>Project Land Uses</b>	<b>Size</b>	<b>Units</b>	<b>Square Feet (sf)</b>	<b>Acreage</b>
Single Family Housing	27	Dwelling Unit	129,364	10.64
City Park	3	Acres	130,680	

##### *Construction Inputs*

CalEEMod computes annual emissions for construction that are based on the project type, size, and acreage. The model provides emission estimates for both on-site and off-site construction activities. On-site activities are primarily made up of construction equipment emissions, while off-site activity includes worker, hauling, and vendor traffic. The construction build-out scenario, including equipment quantities, average hours per day, total number of workdays, and schedule, were based on a blend of information provided by the project applicant and defaults for a project of this type and size (included in *Attachment 1*). The applicant’s construction schedule provided a start date of April 2027, and the project would be built out over a period of approximately 12 months, or 259 construction workdays. The earliest full year of operation was assumed to be 2029.

##### *Construction Traffic Emissions*

Construction would produce traffic in the form of worker trips and truck traffic. The traffic-related emissions are based on worker and vendor trip estimates produced by CalEEMod and haul trips that were computed based on estimated demolition material to be exported, soil imported and/or exported to the site, the amount of concrete truck trips to and from the site, and the amount of asphalt to and from the site. CalEEMod provides daily estimates of worker and vendor trips for each applicable phase. Daily haul trips for demolition and grading were developed by CalEEMod using the provided demolition and soil import/export volumes. The number of cubic yards of cement/asphalt was provided for the project and the total number of concrete hauling trips was also provided.

Summary of Computed Construction Period Emissions

Average daily emissions were annualized for each year of construction by dividing the annual construction emissions by the number of active workdays during that year. Table 3 shows the annualized average daily construction emissions of ROG, NO<sub>x</sub>, PM<sub>10</sub> exhaust, and PM<sub>2.5</sub> exhaust during construction of the project. As indicated in Table 3, predicted annualized project construction emissions would not exceed the BAAQMD significance thresholds during any year of construction.

**Table 3. Construction Period Emissions**

Year	ROG	NO <sub>x</sub>	PM <sub>10</sub> Exhaust	PM <sub>2.5</sub> Exhaust
<i>Construction Emissions Total (Tons)</i>				
2027	0.13	1.18	0.05	0.04
2028	0.95	0.31	0.01	0.01
<i>Average Daily Construction Emissions (pounds/day)</i>				
2027 (191 construction workdays)	1.41	12.32	0.48	0.44
2028 (67 construction workdays)	28.25	9.33	0.31	0.28
<i>BAAQMD Thresholds (pounds per day)</i>	54 lbs./day	54 lbs./day	82 lbs./day	54 lbs./day
<b>Exceed Threshold?</b>	No	No	No	No

Construction activities, particularly during site preparation and grading, would temporarily generate fugitive dust in the form of PM<sub>10</sub> and PM<sub>2.5</sub>. Sources of fugitive dust include disturbed soils at the construction site and trucks carrying uncovered loads of soils. Unless properly controlled, vehicles leaving the site deposit mud on local streets, which is an additional source of airborne dust after it dries. The BAAQMD recommends all projects include a “basic” set of best management practices (BMPs) to manage fugitive dust and considers impacts from dust (i.e., fugitive PM<sub>10</sub> and PM<sub>2.5</sub>) to be less-than-significant if BMPs are implemented to reduce these emissions. The *Housing Element Update DEIR MM AIR-1a* would implement BAAQMD-recommended best management practices.

**DEIR MM AIR-1a: Prior to the issuance of a grading or building permit, the project applicant shall submit an air quality construction plan that includes BAAQMD basic best management practices.**

1. All exposed surfaces (e.g., parking areas, staging areas, soil piles, graded areas, and unpaved access roads) shall be watered two times per day.
2. All haul trucks transporting soil, sand, or other loose material off-site shall be covered.
3. All visible mud or dirt track-out onto adjacent public roads shall be removed using wet power vacuum street sweepers at least once per day. The use of dry power sweeping is prohibited.
4. All vehicle speeds on unpaved roads shall be limited to 15 miles per hour (mph).

5. All roadways, driveways, and sidewalks to be paved shall be completed as soon as possible. Building pads shall be laid as soon as possible after grading unless seeding or soil binders are used.
6. All excavation, grading, and/or demolition activities shall be suspended when average wind speeds exceed 20 mph.
7. All trucks and equipment, including their tires, shall be washed off prior to leaving the site.
8. Unpaved roads providing access to sites located 100 feet or further from a paved road shall be treated with a 6- to 12-inch layer of compacted layer of wood chips, mulch, or gravel.
9. Publicly visible signs shall be posted with the telephone number and name of the person to contact at the lead agency regarding dust complaints. This person shall respond and take corrective action within 48 hours. The Air District's General Air Pollution Complaints number shall also be visible to ensure compliance with applicable regulations.

#### *Effectiveness of DEIR MM AIR-1a*

The measures above are consistent with BAAQMD-recommended basic BMPs for reducing fugitive dust contained in the BAAQMD CEQA Air Quality Guidelines. For this analysis, only the basic set of BMPs are required as the unmitigated fugitive dust emissions from construction are below the BAAQMD single-source threshold.

#### **Operational Period Emissions**

ROG, Particulate Matter (PM), and NO<sub>x</sub> air emissions from the project would be generated primarily from autos driven by future residents. Evaporative emissions from architectural coatings and maintenance products (classified as consumer products) are also typical ROG emission sources from these types of uses. CalEEMod was used to estimate emissions from operation of the proposed project assuming full build-out.

#### CalEEMod Inputs

##### *Land Uses*

The project land uses were input to CalEEMod as described above for the construction period modeling.

##### *Model Year*

Emissions associated with vehicle travel depend on the year of analysis because emission control technology requirements are phased-in over time. Therefore, the earlier the year analyzed in the model, the higher the emission rates utilized by CalEEMod. The earliest year of full operation would be 2029 if construction begins in 2027. Emissions associated with build-out later than 2029 would be lower.

### *Traffic Information*

CalEEMod allows the user to enter specific vehicle trip generation rates. A traffic analysis was not provided for this project. As a result, the default CalEEMod trip generation rates were utilized. The default trip lengths and trip types specified by CalEEMod were also used.

### *Energy*

CalEEMod defaults for energy use were used, which include the 2019 Title 24 Building Standards. GHG emissions modeling includes those indirect emissions from electricity consumption. The electricity provider for the project would be East Bay Community Energy (EBCE), however, this provider is not an option in CalEEMod. Instead, PG&E was used as the electricity provider in CalEEMod. An emission factor of 56 pounds of CO<sub>2</sub> per megawatt of electricity produced was entered into CalEEMod, which is based on PG&E's 2022 emissions rate.<sup>10</sup>

The applicant has stated that the project will utilize an all-electric design. Natural gas use for the residential land use was set to zero and reassigned to electricity use in CalEEMod.

### *Wood-Burning Devices*

CalEEMod default inputs assume new residential construction would include wood-burning fireplaces and stoves. The project would not include wood-burning devices, as these devices are prohibited by BAAQMD Regulation 6, Rule 3.<sup>11</sup> Therefore, the number of woodstoves and woodburning fireplaces in CalEEMod were set to zero.

### *Other Inputs*

Default model assumptions for emissions associated with solid waste generation were used. Wastewater treatment was changed to 100-percent aerobic conditions to represent the use of city services (i.e., the project would not send wastewater to septic tanks or facultative lagoons).

### Summary of Computed Operational Period Emissions

Annual operational emissions were predicted using CalEEMod. The daily emissions were calculated assuming 365 days of operation. Table 4 shows average daily emissions of ROG, NO<sub>x</sub>, total PM<sub>10</sub>, and total PM<sub>2.5</sub> during operation of the project. The operational period emissions would not exceed the BAAQMD significance thresholds.

<i>Exceed Threshold?</i>	No	No	No	No

Notes: <sup>1</sup> Assumes 365-day operation.

### **Impact AIR-3: Expose sensitive receptors to substantial pollutant concentrations?**

Housing Element Update DEIR MM AIR-1b addresses exposure of sensitive receptors to TACs and air pollution. Under this mitigation measure, projects that may result in TAC emissions that are located within 1,000 feet of sensitive receptors are required to prepare a Health Risk Assessment (HRA). Based on the results of the HRA, the Project may be required to identify and implement measures (such as air filtration systems) to reduce potential exposure to particulate matter, carbon monoxide, diesel fumes, and other potential health hazards. Measures identified in the HRA are to be included into the site development plan as a component of a proposed project.

Project impacts related to increased health risk can occur by generating emissions of TACs and air pollutants. This project would introduce new sources of TACs during construction (i.e., on-site construction and truck hauling emissions) and operation (i.e., mobile sources). Project construction activity would generate dust and equipment exhaust that would affect nearby sensitive receptors. The project would not include stationary sources of air pollutants or TACs. Traffic generated by the project would consist of mostly light-duty gasoline-powered vehicles, which would produce low levels of TAC and air pollutant emissions in the local area.

Project impacts to existing sensitive receptors were addressed for temporary construction activities and long-term operational conditions. There are also several sources of existing TACs and localized air pollutants in the vicinity of the project. The impact of the existing sources of TAC was assessed in terms of the cumulative risk, which includes the project contribution as well as the risk on the new sensitive receptors introduced by the project.

### **Health Risk Methodology**

Health risk impacts were addressed by predicting increased cancer risk, the increase in annual PM<sub>2.5</sub> concentrations, and by computing the Hazard Index (HI) for non-cancer health risks. The risk impacts from the project are the risks from construction sources. These sources include on-site construction activity and construction truck hauling. To evaluate the increased cancer risks from the project, a 30-year exposure period was used, per BAAQMD guidance,<sup>12</sup> with the sensitive receptors being exposed to project construction emissions during this timeframe.

<sup>12</sup>BAAQMD, 2022. Appendix E of the *BAAQMD CEQA Guidelines*. April 2023.

The project increased cancer risk is computed by summing the project construction cancer risk over the entire construction period. Unlike the increased maximum cancer risk, the annual PM<sub>2.5</sub> concentration and HI values are not additive but based on the annual maximum values for the entirety of the project. The project maximally exposed individual (MEI) is identified as the sensitive receptor that is most impacted by the project's construction and operation.

The methodology for computing health risks impacts is contained in Appendix E of the BAAQMD CEQA Guidelines. TAC and PM<sub>2.5</sub> emissions are calculated, a dispersion model used to estimate ambient pollutant concentrations, and cancer risks and HI calculated using DPM concentrations.

### **Modeled Sensitive Receptors**

Receptors for this assessment included locations where sensitive populations would be present for extended periods of time (i.e., chronic exposures). This includes the existing residences near the site as shown in Figure 1. Residential receptors are assumed to include all receptor groups (i.e., third trimester, infants, children, and adults) with almost continuous exposure to project emissions. While there are additional sensitive receptors within 1,000 feet of the project site, the receptors chosen are adequate to identify maximum impacts from the project.

### **Health Risk from Project Construction**

The primary health risk impact issues associated with construction projects are cancer risks associated with diesel exhaust (i.e., DPM), which is a known TAC, and exposure to high ambient concentrations of dust (i.e., PM<sub>2.5</sub>). Both pose a potential health and nuisance impact to nearby receptors. A health risk assessment of the project construction activities was conducted that evaluated potential health effects to nearby sensitive receptors from construction emissions of DPM and PM<sub>2.5</sub>.<sup>13</sup> This assessment included dispersion modeling to predict the offsite concentrations resulting from project construction, so that lifetime cancer risks and non-cancer health effects could be estimated.

### Construction Emissions

The CalEEMod model provided total uncontrolled annual PM<sub>10</sub> exhaust emissions (assumed to be DPM) for the off-road construction equipment and for exhaust emissions from on-road vehicles. Total DPM emissions were estimated to be 0.06 tons (113 pounds) and fugitive dust emissions (PM<sub>2.5</sub>) to be 0.05 tons (99 pounds) from all construction stages. The on-road emissions are a result of haul truck travel during grading activities, worker travel, and vendor deliveries during construction. A trip length of one mile was used to represent vehicle travel while at or near the construction site. It was assumed that the emissions from on-road vehicles traveling at or near the site would occur at the construction site.

### Dispersion Modeling

The U.S. EPA AERMOD dispersion model was used to predict DPM and PM<sub>2.5</sub> concentrations at sensitive receptors (i.e., residences) in the vicinity of the project construction area. The AERMOD

---

<sup>13</sup> DPM is identified by California as a toxic air contaminant due to the potential to cause cancer.

dispersion model is a BAAQMD-recommended model for use in modeling analysis of these types of emission activities for CEQA projects.<sup>14</sup> Emission sources for the construction site were grouped into two categories: exhaust emissions of DPM and fugitive PM<sub>2.5</sub> dust emissions.

### *Construction Sources*

To represent the construction equipment exhaust emissions, an area source was used with an emission release height of 20 feet (6 meters).<sup>15</sup> The release height incorporates both the physical release height from the construction equipment (i.e., the height of the exhaust pipe) and plume rise after it leaves the exhaust pipe. Plume rise is due to both the high temperature of the exhaust and the high velocity of the exhaust gas. It should be noted that when modeling an area source, plume rise is not calculated by the AERMOD dispersion model as it would do for a point source (exhaust stack). Therefore, the release height from an area source used to represent emissions from sources with plume rise, such as construction equipment, was based on the height the exhaust plume is expected to achieve, not just the height of the top of the exhaust pipe.

For modeling fugitive PM<sub>2.5</sub> emissions, an area source with a near-ground level release height of 7 feet (2 meters) was used. Fugitive dust emissions at construction sites come from a variety of sources, including truck and equipment travel, grading activities, truck loading (with loaders) and unloading (rear or bottom dumping), loaders and excavators moving and transferring soil and other materials, etc. All of these activities result in fugitive dust emissions at various heights at the point(s) of generation. Once generated, the dust plume will tend to rise as it moves downwind across the site and exit the site at a higher elevation than when it was generated. For all these reasons, a 7-foot release height was used as the average release height across the construction site. Emissions from the construction equipment and on-road vehicle travel were distributed throughout the modeled area sources.

### *AERMOD Inputs and Meteorological Data*

The modeling used a five-year data set (2013 - 2017) of hourly meteorological data from the Livermore Municipal Airport was used with the AERMOD model. Construction emissions were modeled as occurring daily between 8:00 a.m. to 5:00 p.m., when the majority of construction emissions are expected to occur. Annual DPM and PM<sub>2.5</sub> concentrations from construction activities during the 2027 - 2028 period were calculated at nearby sensitive receptors using the model. Receptor heights of 5 feet (1.5 meters) was used to represent the breathing height on the first floor of nearby single-family residences.<sup>16</sup>

<sup>16</sup> Bay Area Air Quality Management District, 2012, *Recommended Methods for Screening and Modeling Local Risks and Hazards, Version 3.0*. May. Web: <https://www.baaqmd.gov/~media/files/planning-and-research/ceqa/risk-modeling-approach-may-2012.pdf?la=en>

## Health Risks from Project Operation

The project would not include stationary sources (i.e., emergency generator) of TACs. Diesel powered vehicles are the primary concern with local traffic-generated TAC impacts. This project is estimated to generate 257 daily trips based on CalEEMod defaults. The project traffic would be dispersed on the roadway system with a majority of the trips being from light-duty vehicles (i.e., passenger automobiles). In addition, projects with the potential to cause or contribute to increased cancer risk from traffic include those that have high numbers of diesel-powered on road trucks or use off-road diesel equipment on site, such as a warehouse distribution center, a quarry, or a manufacturing facility, may potentially expose existing or future planned receptors to substantial cancer risk levels and/or health hazards. This is not a project of concern for mobile sources given the low trip quantity and type of trips generated by the project. Therefore, emissions from project traffic are considered negligible and not included within this analysis.

## Summary of Project-Related Health Risks at the Off-Site Project MEI

For this project, the sensitive receptors identified in Figure 1 as the construction MEI is also the project MEI. At this location, the MEI would be exposed to emissions from construction for a total of one year. As shown in Table 5, the unmitigated cancer risk, annual PM<sub>2.5</sub> concentration, and HI from construction activities at the MEI location would not exceed the BAAQMD single-source significance thresholds. In this case, additional measures are not required under DEIR MM AIR-1b to reduce impacts below the thresholds.

**Table 5. Construction Risk Impacts at the Off-site MEI**

Source		Cancer Risk (per million)	Annual PM <sub>2.5</sub> (µg/m <sup>3</sup> )	Hazard Index
<b>Residential Receptors</b>				
Project Construction	Unmitigated	8.07 (infant)	0.09	0.01
<b>BAAQMD Single-Source Threshold</b>		<b>10.0</b>	<b>0.3</b>	<b>1.0</b>
<b>Exceed Threshold?</b>	Unmitigated	<i>No</i>	<i>No</i>	<i>No</i>

**Figure 1. Location of Project Construction Site, Off-Site Sensitive Receptors, and Maximum TAC Impact**

**Cumulative Health Risks of all TAC Sources at the Off-Site Project MEI**

Cumulative health risk assessments look at all substantial sources of TACs located within 1,000 feet of a project site (i.e., influence area) that can affect sensitive receptors. These sources include rail lines, highways, busy surface streets, and stationary sources identified by BAAQMD.

A review of the project area using BAAQMD’s geographic information systems (GIS) screening maps identified the existing health risks from nearby roadway and stationary sources at the MEI. Nearby roadways within the 1,000-foot influence area could have cumulative health risk impacts at the MEI. Figure 2 shows the locations of the sources affecting the MEI within the influence area. Health risk impacts from these sources upon the MEI are reported in Table 5. Details of the cumulative screening and health risk calculations are included in *Attachment 3*.

**Figure 2. Project Site and Nearby TAC and PM<sub>2.5</sub> Sources**

Local Roadways – Vineyard Avenue

The project site is located near Vineyard Avenue and a few neighborhood streets. Cancer risk, PM<sub>2.5</sub> concentrations, and HI associated with traffic on the nearby roadways were estimated using BAAQMD screening values provided via GIS data files (i.e., raster files).<sup>17</sup> BAAQMD raster files provide screening-level cancer risk, PM<sub>2.5</sub> concentrations, and HI for roadways within the Bay Area and were produced using AERMOD and 20x20-meter emissions grid. The raster file uses EMFAC2021 data for vehicle emissions and fleet mix for roadways and includes Appendix E of the Air District’s CEQA Air Quality Guidance for risk assessment assumptions. These estimates represent conservative risks reflective of 2022 conditions and are meant to provide a conservative estimate of future conditions, which do not reflect the increased proportion of zero emission motor vehicles that will result in lower future emissions.<sup>18</sup> These screening values are considered higher than values that would be obtained with refined modeling methods. These raster data are based on region-wide emissions rather than just those that occur within 1,000 feet of the project. More information regarding the assumptions used to develop the screening layers can be found in

<sup>17</sup> BAAQMD, *Health Risk Screening and Modeling*, 2022. Web: <https://www.baaqmd.gov/plans-and-climate/california-environmental-quality-act-ceqa/ceqa-tools/health-risk-screening-and-modeling>

<sup>18</sup> BAAQMD, 2022. BAAQMD CEQA Air Quality Guidelines Appendix E, Section 9. April 2023

Sections 6 and 7 in Appendix E of BAAQMD's 2022 CEQA guidance.<sup>19</sup> Screening-level cancer risk, PM<sub>2.5</sub> concentration, and HI for the cumulative roadway impacts at the construction MEI are listed in Table 5.

### BAAQMD Permitted Stationary Sources

Permitted stationary sources of air pollution near the project site were identified using BAAQMD's *Permitted Stationary Sources 2022 GIS website*,<sup>20</sup> which identifies the location of nearby stationary sources and their estimated risk and hazard impacts, including emissions and adjustments to account for OEHHA guidance. No sources were identified using this tool, but the project site is located south of an active quarry.

The quarry is opposite Vineyard Avenue, north of the project MEI and extends well to the north beyond 1,000 feet of the project. It contains multiple stationary sources, such as the CEMEX Pleasanton Concrete Plant and Granite Construction. These sources would emit large amounts of particulate matter due to the nature of their operations. However, the portion of the site to be developed is about 1,000 feet or further away from the edge of the quarry. The MEI is over 1,000 feet away. Furthermore, based on recent Google Earth satellite imagery, the major sources of emissions (such as crushing, pulverizing, and transporting equipment) are located at further distances in the northern portions of the quarry, extending the distance between the source of emissions and the project MEI. Finally, the wind through this area predominantly blows out of the west-northwest and towards the east-southeast, while the MEI is to the south-southwest. There is a secondary wind direction that is predominant in late fall and winter that blows from the northeast, also not placing the MEI downwind of the quarries. As a result, the expected health risks from the quarry upon the project MEI are expected to be negligible, and not cause risks to exceed the cumulative threshold levels.

### Summary of Cumulative Health Risk Impact at Project MEI

Table 6 reports both the project and cumulative health risk impacts at the project MEI. The project would not have an exceedance with respect to health risk caused by project construction activities since the cancer risk, annual PM<sub>2.5</sub> concentration, and hazard index do not exceed the BAAQMD single-source thresholds. The project also does not exceed any of the BAAQMD cumulative-source thresholds.

<b>Exceed Threshold?</b>	Unmitigated	<i>No</i>	<i>No</i>	<i>No</i>

### On-Site Health Risk Assessment for TAC Sources - New Project Residences

The DEIR for the Housing Element Update identified MM AIR-1b to address potential exposure of placing new sensitive sensitive receptors within 1,000 feet of air pollutant sources generating TACs, such as roadways with volumes of 10,000 average annual daily trips or greater. This mitigation measure requires new projects to prepare a health risk assessment that identifies potential impacts, and if necessary, identify and implement measures (such as air filtration systems) to reduce potential exposure to particulate matter, carbon monoxide, diesel fumes, and other potential health hazards.

A health risk assessment was completed to evaluate the impact that existing air pollutant and TAC sources would have on the new proposed sensitive receptors (residents) that the project would introduce. The same TAC sources identified above were used in this health risk assessment.<sup>21</sup>

#### Local Roadways – Vineyard Avenue

The roadway impacts on new project residents was conducted in the same manner as described above for the off-site MEI. Table 7 shows the impacts from the cumulative roadways on the project site.

#### Stationary Sources

The stationary source screening analysis for the new project sensitive receptors was conducted in the same manner as described above for evaluating the off-site MEI. As mentioned above, the quarry would have less than significant exposures upon the project site for the same reasons discussed for the off-site MEI.

<sup>21</sup> We note that to the extent this analysis considers *existing* air quality issues in relation to the impact on *future residents* of the Project, it does so for informational purposes only pursuant to the judicial decisions in *CBIA v. BAAQMD* (2015) 62 Cal.4th 369, 386 and *Ballona Wetlands Land Trust v. City of Los Angeles* (2011) 201 Cal.App.4th 455, 473, which confirm that the impacts of the environment on a project are excluded from CEQA unless the project itself “exacerbates” such impacts.

Summary of Cumulative Health Risks at the Project Site

Health risk impacts from the existing TAC sources upon the project site are reported in Table 7. The risks from the singular TAC sources are compared against the BAAQMD single-source threshold. The risks from all the sources are then combined and compared against the BAAQMD cumulative-source threshold. As shown, none of the values exceed the BAAQMD single-source or cumulative-source thresholds.

**Table 7. Impacts from Nearby Sources to Project Site Receptors**

Source	Cancer Risk (per million)	Annual PM <sub>2.5</sub> (µg/m <sup>3</sup> )	Hazard Index
Cumulative Roadways – BAAQMD Raster Data	2.45	0.12	0.01
<b><i>BAAQMD Single-Source Threshold</i></b>	<b>10.0</b>	<b>0.3</b>	<b>1.0</b>
<i>Exceed Threshold?</i>	<i>No</i>	<i>Yes</i>	<i>No</i>

<b><i>BAAQMD Cumulative Source Threshold</i></b>	<b>100</b>	<b>0.8</b>	<b>10.0</b>
<i>Exceed Threshold?</i>	<i>No</i>	<i>No</i>	<i>No</i>

## Greenhouse Gas Emissions

### Setting

Gases that trap heat in the atmosphere, GHGs, regulate the earth's temperature. This phenomenon, known as the greenhouse effect, is responsible for maintaining a habitable climate. The most common GHGs are carbon dioxide (CO<sub>2</sub>) and water vapor but there are also several others, most importantly methane (CH<sub>4</sub>), nitrous oxide (N<sub>2</sub>O), hydrofluorocarbons (HFCs), perfluorocarbons (PFCs), and sulfur hexafluoride (SF<sub>6</sub>). These are released into the earth's atmosphere through a variety of natural processes and human activities. Sources of GHGs are generally as follows:

- CO<sub>2</sub>, CH<sub>4</sub>, and N<sub>2</sub>O are byproducts of fossil fuel combustion.
- N<sub>2</sub>O is associated with agricultural operations such as fertilization of crops.
- CH<sub>4</sub> is commonly created by off-gassing from agricultural practices (e.g., keeping livestock) and landfill operations.
- Chlorofluorocarbons (CFCs) were widely used as refrigerants, propellants, and cleaning solvents but their production has been stopped by international treaty.
- HFCs are now used as a substitute for CFCs in refrigeration and cooling.
- PFCs and sulfur hexafluoride emissions are commonly created by industries such as aluminum production and semi-conductor manufacturing.

Each GHG has its own potency and effect upon the earth's energy balance. This is expressed in terms of a global warming potential (GWP), with CO<sub>2</sub> being assigned a value of 1 and sulfur hexafluoride being several orders of magnitude stronger. In GHG emission inventories, the weight of each gas is multiplied by its GWP and is measured in units of CO<sub>2</sub> equivalents (CO<sub>2</sub>e).

An expanding body of scientific research supports the theory that global climate change is currently affecting changes in weather patterns, average sea level, ocean acidification, chemical reaction rates, and precipitation rates, and that it will increasingly do so in the future. The climate and several naturally occurring resources within California are adversely affected by the global warming trend. Increased precipitation and sea level rise will increase coastal flooding, saltwater intrusion, and degradation of wetlands. Mass migration and/or loss of plant and animal species could also occur. Potential effects of global climate change that could adversely affect human health include more extreme heat waves and heat-related stress; an increase in climate-sensitive diseases; more frequent and intense natural disasters such as flooding, hurricanes and drought; and increased levels of air pollution.

### Federal and Statewide GHG Emissions

The U.S. EPA reported that in 2022, total gross nationwide GHG emissions were 5,215.6 million metric tons (MMT) carbon dioxide equivalent (CO<sub>2</sub>e).<sup>22</sup> These emissions were lower than peak levels of 7,416 MMT that were emitted in 2007. CARB updates the statewide GHG emission

---

<sup>22</sup> United States Environmental Protection Agency, 2022. *Draft Inventory of U.S. Greenhouse Gas Emissions and Sinks 1990-2020*. February. Web: <https://www.epa.gov/ghgemissions/inventory-us-greenhouse-gas-emissions-and-sinks>

inventory on an annual basis where the latest inventory includes 2000 through 2020 emissions.<sup>23</sup> In 2020, GHG emissions from statewide emitting activities were 369.2 MMT CO<sub>2</sub>e. The 2020 emissions have decreased by 25 percent since peak levels in 2004 and are 35.3 MMT CO<sub>2</sub>e lower than 2019 emissions level and almost 62 MMT CO<sub>2</sub>e below the State's 2020 GHG limit of 431 MMT CO<sub>2</sub>e. Per capita GHG emissions in California have dropped from a 2001 peak of 13.8 MT CO<sub>2</sub>e per person to 9.3 MT CO<sub>2</sub>e per person in 2020.

### Recent Regulatory Actions for GHG Emissions

#### *Executive Order S-3-05 – California GHG Reduction Targets*

Executive Order (EO) S-3-05 was signed by Governor Arnold Schwarzenegger in 2005 to set GHG emission reduction targets for California. The three targets established by this EO are as follows: (1) reduce California's GHG emissions to 2000 levels by 2010, (2) reduce California's GHG emissions to 1990 levels by 2020, and (3) reduce California's GHG emissions by 80 percent below 1990 levels by 2050.

#### *Assembly Bill 32 – California Global Warming Solutions Act (2006)*

Assembly Bill (AB) 32, the Global Warming Solutions Act of 2006, codified the State's GHG emissions target by directing CARB to reduce the State's global warming emissions to 1990 levels by 2020. AB 32 was signed and passed into law by Governor Schwarzenegger on September 27, 2006. Since that time, the CARB, CEC, California Public Utilities Commission (CPUC), and Building Standards Commission have all been developing regulations that will help meet the goals of AB 32 and Executive Order S-3-05, which has a target of reducing GHG emissions 85 percent below 1990 levels.

The first Scoping Plan for AB 32 was adopted by CARB in December 2008. Its most recent update was completed in December of 2022<sup>24</sup>. It contains the State's main strategies to achieve carbon neutrality by 2045. This plan extends and expands upon the earlier versions with a target of reducing anthropogenic emissions to 85 percent below 1990 levels by 2045. It also takes the step of adding carbon neutrality as a science-based guide and touchstone for California's climate work. Measures to achieve carbon neutrality include rapidly moving to zero emission vehicles (ZEV), removing natural gas as an option for space conditioning, increasing the number of solar arrays and wind turbines, and scaling up renewable hydrogen for hard-to-electrify end uses.

#### *Senate Bill 375 – California's Regional Transportation and Land Use Planning Efforts (2008)*

California enacted legislation (SB 375) to expand the efforts of AB 32 by controlling indirect GHG emissions caused by urban sprawl. SB 375 provides incentives for local governments and applicants to implement new conscientiously planned growth patterns. This includes incentives for creating attractive, walkable, and sustainable communities and revitalizing existing communities.

---

<sup>23</sup> CARB. 2022. *California Greenhouse Gas Emission for 2000 to 2020*. Web: [https://ww2.arb.ca.gov/sites/default/files/classic/cc/inventory/2000-2020\\_ghg\\_inventory\\_trends.pdf](https://ww2.arb.ca.gov/sites/default/files/classic/cc/inventory/2000-2020_ghg_inventory_trends.pdf)

<sup>24</sup> CARB. 2022. Final 2022 Scoping Plan Update and Appendices. Web: <https://ww2.arb.ca.gov/our-work/programs/ab-32-climate-change-scoping-plan/2022-scoping-plan-documents>

The legislation also allows applicants to bypass certain environmental reviews under CEQA if they build projects consistent with the new sustainable community strategies. Development of more alternative transportation options that would reduce vehicle trips and miles traveled, along with traffic congestion, would be encouraged. SB 375 enhances CARB's ability to reach the AB 32 goals by directing the agency in developing regional GHG emission reduction targets to be achieved from the transportation sector for 2020 and 2035. CARB works with the metropolitan planning organizations (e.g., ABAG and MTC) to align their regional transportation, housing, and land use plans to reduce VMT and demonstrate the region's ability to attain its GHG reduction targets. A similar process is used to reduce transportation emissions of ozone precursor pollutants in the Bay Area.

### *Senate Bill 350 - Renewable Portfolio Standards*

In September 2015, the California Legislature passed SB 350, which increases the states Renewables Portfolio Standard (RPS) for content of electrical generation from the 33 percent target for 2020 to a 50 percent renewables target by 2030.

### *Executive Order B-30-15 & Senate Bill 32 GHG Reduction Targets – 2030 GHG Reduction Target*

In April 2015, Governor Brown signed EO B-30-15, which extended the goals of AB 32, setting a GHG emissions target at 40 percent of 1990 levels by 2030. On September 8, 2016, Governor Brown signed Senate Bill (SB) 32, which legislatively established the GHG reduction target of 40 percent of 1990 levels by 2030. In November 2017, CARB issued *California's 2017 Climate Change Scoping Plan*.<sup>25</sup> While the State is on track to exceed the AB 32 scoping plan 2020 targets, this plan is an update to reflect the enacted SB 32 reduction target.

SB 32 was passed in 2016, which codified a 2030 GHG emissions reduction target of 40 percent below 1990 levels. CARB has drafted a 2022 Scoping Plan Update to reflect the 2030 target set by Executive Order B-30-15 and codified by SB 32. The 2022 draft plan:

- Identifies a path to keep California on track to meet its SB 32 GHG reduction target of at least 40 percent below 1990 emissions by 2030.
- Identifies a technologically feasible, cost-effective path to achieve carbon neutrality by 2045 or earlier.
- Focuses on strategies for reducing California's dependency on petroleum to provide consumers with clean energy options that address climate change, improve air quality, and support economic growth and clean sector jobs.
- Integrates equity and protecting California's most impacted communities as a driving principle.
- Incorporates the contribution of natural and working lands to the state's GHG emissions, as well as its role in achieving carbon neutrality.
- Relies on the most up to date science, including the need to deploy all viable tools, including carbon capture and sequestration as well a direct air capture.

---

<sup>25</sup> California Air Resource Board, 2017. *California's 2017 Climate Change Scoping Plan: The Strategy for Achieving California's 2030 Greenhouse Gas Targets*. November. Web: [https://ww2.arb.ca.gov/sites/default/files/classic/cc/scopingplan/scoping\\_plan\\_2017.pdf](https://ww2.arb.ca.gov/sites/default/files/classic/cc/scopingplan/scoping_plan_2017.pdf)

- Evaluates multiple options for achieving our GHG and carbon neutrality targets, as well as the public health benefits and economic impacts associated with each.

The Scoping Plan was updated in 2022 and lays out how the state can get to carbon neutrality by 2045 or earlier. It is the first Scoping Plan that adds carbon neutrality as a science-based guide and touchstone beyond statutorily established emission reduction targets.<sup>26</sup>

The mid-term 2030 target is considered critical by CARB on the path to obtaining an even deeper GHG emissions target of 80 percent below 1990 levels by 2050, as directed in Executive Order S-3-05. The 2022 Scoping Plan outlines the suite of policy measures, regulations, planning efforts, and investments in clean technologies and infrastructure, providing a blueprint to continue driving down GHG emissions and to not only obtain the statewide goals, but cost-effectively achieve carbon-neutrality by 2045 or earlier. In the 2022 Scoping Plan, CARB recommends:

- VMT per capita reduced 12% below 2019 levels by 2030 and 22% below 2019 levels by 2045.
- 100% of Light-duty vehicle sales are zero emissions vehicles (ZEV) by 2035.
- 100% of medium duty/heavy duty vehicle sales are ZEV by 2040.
- 100% of passenger and other locomotive sales are ZEV by 2030.
- 100% of line haul locomotive sales are ZEV by 2035.
- All electric appliances in new residential and commercial building beginning 2026 (residential) and 2029 (commercial).
- 80% of residential appliance sales are electric by 2030 and 100% of residential appliance sales are electric by 2035.
- 80% of commercial appliance sales are electric by 2030 and 100% of commercial appliance sales are electric by 2045.

### *SB 743 Transportation Impacts*

Senate Bill 743 required lead agencies to abandon the old “level of service” metric for evaluating a project’s transportation impacts, which was based solely on the amount of delay experienced by motor vehicles. In response, the Governor’s Office of Planning and Research (OPR) developed a VMT metric that considered other factors such as reducing GHG emissions and developing multimodal transportation<sup>27</sup>. A VMT-per-capita metric was adopted into the CEQA Guidelines Section 15064.3 in November 2017. Given current baseline per-capita VMT levels computed by CARB in the 2030 Scoping Plan of 22.24 miles per day for light-duty vehicles and 24.61 miles per day for all vehicle types, the reductions needed to achieve the 2050 climate goal are 16.8 percent for light-duty vehicles and 14.3 percent for all vehicle types combined. Based on this analysis (as well as other factors), OPR recommended using a 15-percent reduction in per capita VMT as an appropriate threshold of significance for evaluating transportation impacts.

<sup>26</sup> <https://ww2.arb.ca.gov/our-work/programs/ab-32-climate-change-scoping-plan/2022-scoping-plan-documents>

<sup>27</sup> Governor’s Office of Planning and Research. 2018. *Technical Advisory on Evaluating Transportation Impacts in CEQA*. December.

### *Executive Order B-55-18 – Carbon Neutrality*

In 2018, a new statewide goal was established to achieve carbon neutrality as soon as possible, but no later than 2045, and to maintain net negative emissions thereafter. CARB and other relevant state agencies are tasked with establishing sequestration targets and create policies/programs that would meet this goal.

### *Senate Bill 100 – Current Renewable Portfolio Standards*

In September 2018, SB 100 was signed by Governor Brown to revise California’s RPS program goals, furthering California’s focus on using renewable energy and carbon-free power sources for its energy needs. The bill would require all California utilities to supply a specific percentage of their retail sales from renewable resources by certain target years. By December 31, 2024, 44 percent of the retail sales would need to be from renewable energy sources, by December 31, 2026 the target would be 40 percent, by December 31, 2027 the target would be 52 percent, and by December 31, 2030 the target would be 60 percent. By December 31, 2045, all California utilities would be required to supply retail electricity that is 100 percent carbon-free and sourced from eligible renewable energy resource to all California end-use customers.

### *California Building Standards Code – Title 24 Part 11 & Part 6*

The California Green Building Standards Code (CALGreen Code) is part of the California Building Standards Code under Title 24, Part 11.<sup>28</sup> The CALGreen Code encourages sustainable construction standards that involve planning/design, energy efficiency, water efficiency resource efficiency, and environmental quality. These green building standard codes are mandatory statewide and are applicable to residential and non-residential developments. The most recent CALGreen Code (2022 California Building Standard Code) was effective as of January 1, 2023.

The California Building Energy Efficiency Standards (California Energy Code) is under Title 24, Part 6 and is overseen by the California Energy Commission (CEC). This code includes design requirements to conserve energy in new residential and non-residential developments, while being cost effective for homeowners. This Energy Code is enforced and verified by cities during the planning and building permit process. The current energy efficiency standards (2022 Energy Code) replaced the 2019 Energy Code as of January 1, 2023. Under the 2019 standards, single-family homes are predicted to be 53 percent more efficient than homes built under the 2016 standard due more stringent energy-efficiency standards and mandatory installation of solar photovoltaic systems. For nonresidential developments, it is predicted that these buildings will use 30 percent less energy due to lightening upgrades.<sup>29</sup>

Requirements for electric vehicle (EV) charging infrastructure are set forth in Title 24 of the California Code of Regulations. The CALGreen standards consist of a set of mandatory standards required for new development, as well as two more voluntary standards known as Tier 1 and Tier 2. The CalGreen 2022 standards require deployment of additional EV chargers in various building

---

<sup>28</sup> See: <https://www.dgs.ca.gov/BSC/Resources/Page-Content/Building-Standards-Commission-Resources-List-Folder/CALGreen#:~:text=CALGreen%20is%20the%20first%2Din,to%201990%20levels%20by%202020.>

<sup>29</sup> See: [https://www.energy.ca.gov/sites/default/files/2020-03/Title\\_24\\_2019\\_Building\\_Standards\\_FAQ\\_ada.pdf](https://www.energy.ca.gov/sites/default/files/2020-03/Title_24_2019_Building_Standards_FAQ_ada.pdf)

types, including multifamily residential and nonresidential land uses. They include requirements for both EV capable parking spaces and the installation of Level 2 EV supply equipment for multifamily residential and nonresidential buildings. The 2022 CALGreen standards include requirements for both EV readiness, installation of EV chargers, and include both mandatory requirements and more aggressive voluntary Tier 1 and Tier 2 provisions. Providing EV charging infrastructure that meets current CALGreen requirements will not be sufficient to power the anticipated more extensive level of EV penetration in the future that is needed to meet SB 30 climate goals.

CEC studies have identified the most aggressive electrification scenario as putting the building sector on track to reach the carbon neutrality goal by 2045.<sup>30</sup> Installing new natural gas infrastructure in new buildings will interfere with this goal. To meet the State’s goal, communities have been adopting “Reach” codes that prohibit natural gas connections in new and remodeled buildings.

### *Advanced Clean Cars*

The Advanced Clean Cars Program, originally adopted by CARB in 2012, was designed to bring together CARB’s traditional passenger vehicle requirements to meet federal air quality standards and also support California’s AB 32 goals to develop and implement programs to reduce GHG emissions back down to 1990 levels by 2020, a goal achieved in 2016 as a result of numerous emissions reduction programs.

*Advanced Clean Cars II (ACC II)* is phase two of the original rule. ACC II establishes a year-by-year process, starting in 2026, so all new cars and light trucks sold in California will be zero-emission vehicles by 2035, including plug-in hybrid electric vehicles. The regulation codifies the light-duty vehicle goals set out in Governor Newsom’s Executive Order N-79-20. Currently, 16 percent of new light-duty vehicles sold in California are zero emissions or plug-in hybrids. By 2030, 68 percent of new vehicles sold in California would be zero emissions and 100 percent by 2035.

### City of Pleasanton Climate Action Plan 2.0

The City of Pleasanton adopted the Climate Action Plan (CAP) 2.0 in February of 2022. It establishes 2030 and 2045 GHG emission targets with strategies and actions to reduce emissions to 4.11 MTCO<sub>2</sub>e per capita by 2030 and provide substantial progress towards carbon neutrality by 2045. Further, the CAP 2.0 is considered a qualified GHG reduction strategy and provides CEQA streamlining for future development.

As such, a GHG Emission Compliance Checklist was developed to assist with determining CAP 2.0 consistency for future developments. CAP 2.0 includes actions that are both mandatory and voluntary, both contained in the Checklist. Projects that are consistent with the Checklist are not required to complete a project-specific GHG analysis.

## City of Pleasanton Housing Element Update

The City of Pleasanton 2023 – 2031 (6<sup>th</sup> Cycle) Housing Element Update addressed operational GHG emissions from a full build out of the Housing Element Update in year 2031. The analysis involved analyzing sources of GHG emissions including vehicular traffic, utilization of any landscaping equipment, off-site generation of electrical power, use of energy required to convey water and wastewater to the potential sites for housing, hauling and disposal of solid waste from the potential sites for housing, any fugitive refrigerants from air conditioning or refrigerators, and operation of any proposed stationary sources such as backup generators or fire pumps.

Since the Pleasanton CAP 2.0 is a qualified CAP, the Housing Element Update was compared to the CAP 2.0's 4.1 MT CO<sub>2e</sub> per capita threshold to measure the significance of the Housing Element Update's GHG emissions. At 3.2 MT CO<sub>2e</sub> per capita assuming a full build-out in 2031, the Housing Element Update is consistent with the Pleasanton CAP 2.0 and would result in less-than-significant GHG emissions. Per the DEIR for the City of Pleasanton 2023 – 2031 (6<sup>th</sup> Cycle) Housing Element Update, any development that is consistent with the Housing Element Update would be consistent with CAP 2.0.<sup>31</sup>

## BAAQMD GHG Significance Thresholds

On April 20, 2022, BAAQMD adopted new thresholds of significance for operational GHG emissions from land use projects for projects beginning the CEQA process. The following framework is how BAAQMD will determine GHG significance moving forward.<sup>32</sup> Note BAAQMD intends that the thresholds apply to projects that begin the CEQA process after adoption of the thresholds, unless otherwise directed by the lead agency. The new thresholds of significance are:

- A. Projects must include, at a minimum, the following project design elements:
  - a. Buildings
    - i. The project will not include natural gas appliances or natural gas plumbing (in both residential and non-residential development).
    - ii. The project will not result in any wasteful, inefficient, or unnecessary energy usage as determined by the analysis required under CEQA Section 21100(b)(3) and Section 15126.2(b) of the State CEQA Guidelines.
  - b. Transportation
    - i. Achieve a reduction in project-generated vehicle miles traveled (VMT) below the regional average consistent with the current version of the California Climate Change Scoping Plan (currently 15 percent) or meet a locally adopted Senate Bill 743 VMT target, reflecting the recommendations provided in the Governor's Office of Planning and Research's Technical Advisory on Evaluating Transportation Impacts in CEQA:
      1. Residential Projects: 15 percent below the existing VMT per capita

---

<sup>31</sup> City of Pleasanton 2023 – 2031 (6<sup>th</sup> Cycle) Housing Element Update DEIR Page 3.7-45.

<sup>32</sup> Justification Report: BAAQMD CEQA Thresholds for Evaluating the Significance of Climate Impacts from Land Use Project and Plans. Web: [https://www.baaqmd.gov/~/\\_media/files/planning-and-research/ceqa/ceqa-thresholds-2022/justification-report-pdf.pdf?la=en](https://www.baaqmd.gov/~/_media/files/planning-and-research/ceqa/ceqa-thresholds-2022/justification-report-pdf.pdf?la=en)

- 2. Office Projects: 15 percent below the existing VMT per employee
- 3. Retail Projects: no net increase in existing VMT
- ii. Achieve compliance with off-street electric vehicle requirements in the most recently adopted version of CALGreen Tier 2.

B. Be consistent with a local GHG reduction strategy that meets the criteria under State CEQA Guidelines Section 15183.5(b).

Any new land use project would have to include either section A or B from the above list, not both, to be considered in compliance with BAAQMD’s GHG thresholds of significance.

**Impact GHG-1: Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?**

For this impact to be considered less than significant, it must be consistent with a local GHG reduction strategy (Threshold B) or meet the minimum project design elements recommended by BAAQMD (Threshold A). Threshold B is being applied to the analysis of this project as the City of Pleasanton has adopted a qualified CAP that includes a CAP Consistency Checklist. The CAP Consistency Checklist is included in *Attachment 4*.

As shown in the CAP Consistency Checklist, the project is consistent with CAP 2.0 and, therefore, is consistent with the Housing Element Update. As a result, the project would have a less-than-significant impact with respect to GHG emissions.

**Impact GHG-2: Conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emissions of greenhouse gases?**

The City of Pleasanton has a CAP, Housing Element Update, and enforces its building codes, all which aim to reduce GHG emissions. Therefore, if individual projects conform to the CAP 2.0 and Housing Element Update, they would not conflict with local plans, policies, or regulations applicable to GHG emissions. Further, the Housing Element Update was shown to be consistent with the applicable measures and actions of the CAP 2.0. As stated above, the proposed project is consistent with the Housing Element Update and CAP 2.0. The proposed project would, however, be constructed in conformance with at minimum the 2022 CalGreen and the Title 24 Building Codes, which requires high-efficiency water fixtures, water-efficient irrigation systems, and compliance with current energy efficiency standards. Compliance with these standards ensures compliance with State and federal plans, policies, and regulations applicable to GHG emissions. The proposed project could result in a significant impact with respect to Impact GHG-2.

## **Supporting Documentation**

*Attachment 1* includes the CalEEMod outputs for project construction and operational criteria air pollutants. Also included are any modeling assumptions.

*Attachment 2* is the health risk assessment. This includes the summary of the dispersion modeling and the cancer risk calculations for construction. The AERMOD dispersion modeling files for this assessment, which are quite voluminous, are available upon request and would be provided in digital format.

*Attachment 3* includes the cumulative health risk screening, modeling results, and health risk calculations from sources affecting the project MEI and new project sensitive receptors.

*Attachment 4* includes the City of Pleasanton Climate Action Plan 2.0 Consistency Checklist.

**Attachment 1: CalEEMod Input Assumptions and Outputs**

# 1. Basic Project Information

## 1.1. Basic Project Information

Data Field	Value
Project Name	24-047 Vineyard Ave
Construction Start Date	4/9/2027
Operational Year	2029
Lead Agency	—
Land Use Scale	Project/site
Analysis Level for Defaults	County
Windspeed (m/s)	3.00
Precipitation (days)	33.2
Location	37.66049564187115, -121.82962072896936
County	Alameda
City	Pleasanton
Air District	Bay Area AQMD
Air Basin	San Francisco Bay Area
TAZ	1682
EDFZ	1
Electric Utility	Pacific Gas & Electric Company
Gas Utility	Pacific Gas & Electric
App Version	2022.1.1.28

## 1.2. Land Use Types

Land Use Subtype	Size	Unit	Lot Acreage	Building Area (sq ft)	Landscape Area (sq ft)	Special Landscape Area (sq ft)	Population	Description
Single Family Housing	27.0	Dwelling Unit	10.6	129,364	316,247	—	76.0	—

City Park	3.00	Acre	3.00	0.00	0.00	0.00	—	—
-----------	------	------	------	------	------	------	---	---

### 1.3. User-Selected Emission Reduction Measures by Emissions Sector

Sector	#	Measure Title
Construction	C-5	Use Advanced Engine Tiers

## 2. Emissions Summary

### 2.1. Construction Emissions Compared Against Thresholds

Criteria Pollutants (lb/day for daily, ton/yr for annual) and GHGs (lb/day for daily, MT/yr for annual)

## 5.4. Vehicles

### 5.4.1. Construction Vehicle Control Strategies

Control Strategies Applied	PM10 Reduction	PM2.5 Reduction
Water unpaved roads twice daily	55%	55%
Limit vehicle speeds on unpaved roads to 25 mph	44%	44%

## 5.5. Architectural Coatings

Phase Name	Residential Interior Area Coated (sq ft)	Residential Exterior Area Coated (sq ft)	Non-Residential Interior Area Coated (sq ft)	Non-Residential Exterior Area Coated (sq ft)	Parking Area Coated (sq ft)
------------	--	--	--	--	-----------------------------

Architectural Coating	261,962	87,321	0.00	0.00	—
-----------------------	---------	--------	------	------	---

## 5.6. Dust Mitigation

### 5.6.1. Construction Earthmoving Activities

Phase Name	Material Imported (cy)	Material Exported (cy)	Acres Graded (acres)	Material Demolished (Ton of Debris)	Acres Paved (acres)
Demolition	0.00	0.00	0.00	10.0	—
Site Preparation	—	—	48.8	0.00	—
Grading	—	0.00	110	0.00	—
Paving	0.00	0.00	0.00	0.00	0.30

### 5.6.2. Construction Earthmoving Control Strategies

Control Strategies Applied	Frequency (per day)	PM10 Reduction	PM2.5 Reduction
Water Exposed Area	2	61%	61%

## 5.7. Construction Paving

Land Use	Area Paved (acres)	% Asphalt
Single Family Housing	0.30	0%
City Park	0.00	0%

## 5.8. Construction Electricity Consumption and Emissions Factors

### kWh per Year and Emission Factor (lb/MWh)

Year	kWh per Year	CO2	CH4	N2O
2027	0.00	204	0.03	< 0.005
2028	0.00	204	0.03	< 0.005

## 5.9. Operational Mobile Sources

### 5.9.1. Unmitigated

Land Use Type	Trips/Weekday	Trips/Saturday	Trips/Sunday	Trips/Year	VMT/Weekday	VMT/Saturday	VMT/Sunday	VMT/Year
Single Family Housing	255	258	231	91,919	2,316	2,341	2,098	835,225
City Park	2.34	5.88	6.57	1,259	19.6	49.2	55.0	10,541

### 5.9.2. Mitigated

Land Use Type	Trips/Weekday	Trips/Saturday	Trips/Sunday	Trips/Year	VMT/Weekday	VMT/Saturday	VMT/Sunday	VMT/Year
Single Family Housing	255	258	231	91,919	2,316	2,341	2,098	835,225
City Park	2.34	5.88	6.57	1,259	19.6	49.2	55.0	10,541

## 5.10. Operational Area Sources

### 5.10.1. Hearths

#### 5.10.1.1. Unmitigated

Hearth Type	Unmitigated (number)
Single Family Housing	—
Wood Fireplaces	0
Gas Fireplaces	5
Propane Fireplaces	0
Electric Fireplaces	0
No Fireplaces	0
Conventional Wood Stoves	0
Catalytic Wood Stoves	0
Non-Catalytic Wood Stoves	0

Pellet Wood Stoves	0
--------------------	---

### 5.10.1.2. Mitigated

Hearth Type	Unmitigated (number)
Single Family Housing	—
Wood Fireplaces	0
Gas Fireplaces	5
Propane Fireplaces	0
Electric Fireplaces	0
No Fireplaces	0
Conventional Wood Stoves	0
Catalytic Wood Stoves	0
Non-Catalytic Wood Stoves	0
Pellet Wood Stoves	0

### 5.10.2. Architectural Coatings

Residential Interior Area Coated (sq ft)	Residential Exterior Area Coated (sq ft)	Non-Residential Interior Area Coated (sq ft)	Non-Residential Exterior Area Coated (sq ft)	Parking Area Coated (sq ft)
261962.09999999998	87,321	0.00	0.00	—

### 5.10.3. Landscape Equipment

Season	Unit	Value
Snow Days	day/yr	0.00
Summer Days	day/yr	180

### 5.10.4. Landscape Equipment - Mitigated

Season	Unit	Value
--------	------	-------

Snow Days	day/yr	0.00
Summer Days	day/yr	180

## 5.11. Operational Energy Consumption

### 5.11.1. Unmitigated

#### Electricity (kWh/yr) and CO2 and CH4 and N2O and Natural Gas (kBTU/yr)

Land Use	Electricity (kWh/yr)	CO2	CH4	N2O	Natural Gas (kBTU/yr)
Single Family Housing	532,741	56.0	0.0330	0.0040	0.00
City Park	0.00	56.0	0.0330	0.0040	0.00

### 5.11.2. Mitigated

#### Electricity (kWh/yr) and CO2 and CH4 and N2O and Natural Gas (kBTU/yr)

Land Use	Electricity (kWh/yr)	CO2	CH4	N2O	Natural Gas (kBTU/yr)

#### 5.18.2.2. Mitigated

Tree Type	Number	Electricity Saved (kWh/year)	Natural Gas Saved (btu/year)
-----------	--------	------------------------------	------------------------------

## 6. Climate Risk Detailed Report

### 6.1. Climate Risk Summary

Cal-Adapt midcentury 2040–2059 average projections for four hazards are reported below for your project location. These are under Representation Concentration Pathway (RCP) 8.5 which assumes GHG emissions will continue to rise strongly through 2050 and then plateau around 2100.

Climate Hazard	Result for Project Location	Unit
Temperature and Extreme Heat	16.4	annual days of extreme heat
Extreme Precipitation	3.80	annual days with precipitation above 20 mm
Sea Level Rise	—	meters of inundation depth
Wildfire	15.3	annual hectares burned

Temperature and Extreme Heat data are for grid cell in which your project are located. The projection is based on the 98th historical percentile of daily maximum/minimum temperatures from observed historical data (32 climate model ensemble from Cal-Adapt, 2040–2059 average under RCP 8.5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

Extreme Precipitation data are for the grid cell in which your project are located. The threshold of 20 mm is equivalent to about  $\frac{3}{4}$  an inch of rain, which would be light to moderate rainfall if received over a full day or heavy rain if received over a period of 2 to 4 hours. Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

Sea Level Rise data are for the grid cell in which your project are located. The projections are from Radke et al. (2017), as reported in Cal-Adapt (Radke et al., 2017, CEC-500-2017-008), and consider inundation location and depth for the San Francisco Bay, the Sacramento-San Joaquin River Delta and California coast resulting different increments of sea level rise coupled with extreme storm events. Users may select from four scenarios to view the range in potential inundation depth for the grid cell. The four scenarios are: No rise, 0.5 meter, 1.0 meter, 1.41 meters

Wildfire data are for the grid cell in which your project are located. The projections are from UC Davis, as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider historical data of climate, vegetation, population density, and large (> 400 ha) fire history. Users may select from four model simulations to view the range in potential wildfire probabilities for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

### 6.2. Initial Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	N/A	N/A	N/A	N/A
Extreme Precipitation	1	0	0	N/A
Sea Level Rise	1	0	0	N/A
Wildfire	1	0	0	N/A
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	0	0	0	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.

The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.

The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores do not include implementation of climate risk reduction measures.

### 6.3. Adjusted Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	N/A	N/A	N/A	N/A
Extreme Precipitation	1	1	1	2
Sea Level Rise	1	1	1	2
Wildfire	1	1	1	2
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	1	1	1	2

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.

The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.

The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores include implementation of climate risk reduction measures.

### 6.4. Climate Risk Reduction Measures

## 7. Health and Equity Details

### 7.1. CalEnviroScreen 4.0 Scores

The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Exposure Indicators	—
AQ-Ozone	32.1

AQ-PM	18.0
AQ-DPM	21.2
Drinking Water	44.8
Lead Risk Housing	11.2
Pesticides	66.1
Toxic Releases	36.2
Traffic	39.9
Effect Indicators	—
CleanUp Sites	0.00
Groundwater	22.4
Haz Waste Facilities/Generators	38.7
Impaired Water Bodies	43.8
Solid Waste	91.8
Sensitive Population	—
Asthma	16.6
Cardio-vascular	11.3
Low Birth Weights	22.6
Socioeconomic Factor Indicators	—
Education	7.40
Housing	4.51
Linguistic	36.0
Poverty	5.35
Unemployment	9.72

## 7.2. Healthy Places Index Scores

The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Economic	—

Above Poverty	95.8937508
Employed	85.29449506
Median HI	91.2485564
Education	—
Bachelor's or higher	86.52636982
High school enrollment	100
Preschool enrollment	86.60336199
Transportation	—
Auto Access	53.75336841
Active commuting	70.71731041
Social	—
2-parent households	85.82060824
Voting	87.09097908

2016 Voting	84.7

### 7.3. Overall Health & Equity Scores

Metric	Result for Project Census Tract
CalEnviroScreen 4.0 Score for Project Location (a)	6.00
Healthy Places Index Score for Project Location (b)	95.0
Project Located in a Designated Disadvantaged Community (Senate Bill 535)	No
Project Located in a Low-Income Community (Assembly Bill 1550)	No
Project Located in a Community Air Protection Program Community (Assembly Bill 617)	No

a: The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

b: The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

### 7.4. Health & Equity Measures

No Health & Equity Measures selected.

### 7.5. Evaluation Scorecard

Health & Equity Evaluation Scorecard not completed.

### 7.6. Health & Equity Custom Measures

No Health & Equity Custom Measures created.

## 8. User Changes to Default Data

Screen	Justification
Land Use	Land use info provided by applicant. Residential and garage spaces combined into total residential square footage entered above.
Construction: Construction Phases	Applicant provided LC schedule.
Construction: Off-Road Equipment	Equipment based on CalEEMod defaults that were modified by applicant.
Construction: Trips and VMT	Concrete and asphalt total trips provided. Divided by phase length to get trips per day.
Operations: Hearths	No hearths/fireplaces.
Operations: Energy Use	Project applicant states project will be all electric. Natural gas usage converted to electricity usage.
Characteristics: Utility Information	PG&E 2022 Base plan CO2 intensity rate entered.
Operations: Water and Waste Water	100% aerobic.

**The Vineyards, Pleasanton, CA - Construction Impacts - Without Mitigation**  
**Maximum DPM Cancer Risk and PM2.5 Calculations From Construction**  
**Impacts at Off-Site MEI Location - 1.5 meter receptor height**

Cancer Risk (per million) = CPF x Inhalation Dose x ASF x ED/AT x FAH x 1.0E6

- Where: CPF = Cancer potency factor (mg/kg-day)<sup>1</sup>  
 ASF = Age sensitivity factor for specified age group  
 ED = Exposure duration (years)  
 AT = Averaging time for lifetime cancer risk (years)  
 FAH = Fraction of time spent at home (unitless)

Inhalation Dose = C<sub>air</sub> x DBR x A x (EF/365) x 10<sup>-6</sup>

- Where: C<sub>air</sub> = concentration in air (µg/m<sup>3</sup>)  
 DBR = daily breathing rate (L/kg body weight-day)  
 A = Inhalation absorption factor  
 EF = Exposure frequency (days/year)  
 10<sup>-6</sup> = Conversion factor

**Values**

Age --> Parameter	Infant/Child			Adult
	3rd Trimester	0 - 2	2 - 16	16 - 30
ASF =	10	10	3	1
CPF =	1.10E+00	1.10E+00	1.10E+00	1.10E+00
DBR* =	361	1090	572	261
A =	1	1	1	1
EF =	350	350	350	350
AT =	70	70	70	70
FAH =	1.00	1.00	1.00	0.73

\* 95th percentile breathing rates for infants and 80th percentile for children and adults

Permitted Stationary Sources	0	N/A	N/A

NOTE: A larger buffer than 1,000 may be warranted depending on proximity to significant sources.

**Attachment 4: City of Pleasanton Climate Action Plan 2.0 Consistency Checklist**

## GHG EMISSION COMPLIANCE CHECKLIST

The City of Pleasanton has adopted the Climate Action Plan (CAP) 2.0 that establishes 2030 and 2045 greenhouse gas (GHG) emissions targets. The CAP 2.0 includes specific strategies and actions to reduce emissions to 4.11 MTCO<sub>2e</sub> per capita by 2030 (70 percent below 1990 levels) and provide substantial progress towards carbon neutrality by 2045. This is consistent with and exceeds California's goal of reducing GHG emissions to 40 percent below 1990 levels (per Senate Bill 32) by 2030 and neutrality (per Executive Order B-55-18) by 2045.

Pursuant to California Environmental Quality Act (CEQA) Guidelines Section 15183.5, a lead agency may determine that a project's incremental contribution to a cumulative effect is not cumulatively considerable if it complies a previously adopted plan. The CAP 2.0 is considered a "qualified" GHG reduction strategy and provides CEQA streamlining for future development that are subject to discretionary review and trigger environmental review pursuant to the CEQA. The purpose of the following GHG Emission Compliance Checklist (herein referred to as "Checklist") is to assist with determining CAP 2.0 consistency for a future development project or plan (herein referred to as the "Project").

The CAP 2.0 includes actions that are both mandatory and voluntary actions, both contained in this Checklist. While mandatory actions that are required, voluntary actions are encouraged. Funding may be available for certain efforts as noted in the Checklist. Projects that are consistent with the CAP 2.0, as determined using this Checklist, may rely on the programmatic CAP 2.0 Initial Study-Negative Declaration GHG emissions analysis for the respective project- and cumulative-level GHG emissions impacts analysis. Inconsistency with any of the applicable mandatory actions in this Checklist would make a Project inconsistent with the overall Checklist. **Projects that are identified as inconsistent with the CAP 2.0 through the use of this Checklist must prepare a project-specific analysis of GHG emissions, including quantification of existing and projected GHG emissions compared to the [City's approved GHG thresholds](#). Said projects must still incorporate CAP 2.0 actions in this Checklist to the extent feasible.**

This Checklist may be periodically updated to incorporate new GHG reduction techniques, to comply with later amendments to the CAP, or to reflect changes in other sustainability-focused local, State, or federal laws, regulations, ordinances, and programs.

### Checklist Applicability

The Checklist includes a column with the applicable regulation, project type, requirements, Project compliance, and explanation. The **Project Type** column of the Checklist indicates regulation applicability based on project type. Project types include:

- Renovations and additions
- New construction (which includes any new buildings irrespective of existing development on a lot as well as any development on a vacant lot)
- A development plan/planning document

- Covered Projects which includes:
  1. Construction of any City-Sponsored project
  2. Construction of any new commercial/industrial building
  3. Construction of any new residential unit(s) or mixed-use project
  4. Renovation/Additions of any commercial or City-sponsored project that adds 20,000 gross square-feet or greater (but not including a renovation to a project that consists solely of interior improvements to existing buildings)
  5. Additions to any residential project that are 2,000 gross square-feet or greater
  6. Addition to any residential project of any size if it has been less than five years from the date of certificate of occupancy for original structure.
- All projects (which includes all the above listed project types)

It is possible for a project to fit multiple project types and all applicable regulations must be met.

All Project applicants should complete the **Compliance** column for each regulation (i.e., indicate yes, no, or N/A). The **Explanation** column should note the plan sheets where the action is shown in plan set, if applicable. It should also provide an explanation if it will not be achieved.

### **Submittal Requirements**

This Checklist is required to accompany discretionary applications submittals as detailed in submittal requirement handouts. The Checklist is designed to assist the applicant in identifying the minimum CAP 2.0 and other applicable climate-focused requirements specific to a Project. However, it may be necessary to supplement the completed Checklist with supporting materials, calculations, or certifications to demonstrate compliance with CAP 2.0 and other requirements. If the minimum CAP 2.0 and other applicable climate-focused requirements are not already clearly committed to as part of the Project, the mandatory actions will be included as respective project conditions of approval.

Please note, cumulative GHG emissions associated with construction from a land use development project are generally orders of magnitude lower than the operational emissions from a project because construction emissions are generally short in duration compared to the project's overall lifetime, and thus can be assessed qualitatively as part of related CEQA GHG emissions analysis. However, some projects may have long construction periods or entail large quantities of cut and fill that could result in construction related GHG emissions that may be considered significant. Thus, the City retains the discretion on a project-by-project basis to consider whether a project's construction-related GHG emissions could be cumulatively considerable and require more detailed quantitative CEQA GHG emissions analysis and respective mitigation. The City also retains discretion to require additional analysis of GHG emissions on a case-by-case basis and require additional climate mitigations.

Regulation	Project Type	Requirements	Compliance	Required Explanation
<b>Land Use</b>				
<b>Green Building Standards</b>				
CALGreen Code	New Construction and Additions	3. <b>Green Building.</b> Will the Project comply with the latest version of mandatory measures in the CALGreen Code ( <a href="#">non-residential</a> and <a href="#">residential</a> )? The CALGreen checklist is required at Building Permit submittal.	Yes <input checked="" type="checkbox"/> No <input type="checkbox"/> N/A <input type="checkbox"/>	_____ _____ _____
Municipal Code	Covered Projects <sup>1</sup>	4. <b>Green Building.</b> Will the Project comply with the Pleasanton <a href="#">Municipal Code Chapter 17.50</a> including achieving LEED certification or achieving a “green home” rating with Build It Green as detailed in 17.50?	Yes <input checked="" type="checkbox"/> No <input type="checkbox"/> N/A <input type="checkbox"/>	_____ _____ _____
CAP 2.0 (P11)	New Construction	5. <b>LEED Neighborhood.</b> If the project is neighborhood scale, does it incorporate elements of <a href="#">LEED ND</a> ? Provide the LEED ND checklist indicating which elements of Smart Location & Linkage, Neighborhood Pattern & Design, Green Infrastructure & Building, and Innovation & Design Process are achieved.	Yes <input type="checkbox"/> No <input type="checkbox"/> N/A <input checked="" type="checkbox"/>	This detail of information is not yet available _____ _____

<sup>1</sup> Covered Projects include: 1) Construction of any City-Sponsored project; 2) Construction of any new commercial/industrial building; 3) Construction of any new residential unit(s) or mixed use project; 4) Renovation/Additions of any commercial or City-sponsored project that adds 20,000 gross square-foot or greater (but not including a renovation to a project that consists solely of interior improvements to existing buildings); 5) Additions to any residential project that is 2,000 gross square-foot or greater; and 6) Addition to any residential project of any size, if it has been less than five years from the date of certificate of occupancy for original structure.

**Energy**

**Energy Efficiency**

CAP 2.0 (S2)	Additions and Renovations	<p><b>6. Energy Efficiency Upgrades.</b> Will the Project install energy efficient window upgrades, LED lighting, and other efficiency upgrades. <a href="#">Rebates and financing</a> may be available. <i>Voluntary</i></p>	Yes <input type="checkbox"/> No <input type="checkbox"/> N/A <input checked="" type="checkbox"/>	_____ _____ _____
-----------------	---------------------------	---	--	-------------------------

**Renewable Energy**

CAP 2.0 (P4)	Covered Projects	<p><b>7. Solar.</b> Will the Project include installation of a solar PV system at time of new construction that meets the power needs of the new building? Indicate the plan sheet(s) where solar information is provided.</p>	Yes <input type="checkbox"/> No <input type="checkbox"/> N/A <input checked="" type="checkbox"/>	Min.solar sizing will be shown on <u>the Title 24 calculations.</u> Full Solar plans provided by _____ solar installer.
CAP 2.0 (P4)	Covered Projects	<p><b>8. Energy Storage System.</b> When solar is being installed, will the Project include a battery storage back-up system? Indicate the plan sheet(s) where battery storage information is provided.</p>	Yes <input type="checkbox"/> No <input type="checkbox"/> N/A <input checked="" type="checkbox"/>	We will provide code required battery ready provisions. This will be denoted on the architectural _____ utility plans.
CAP 2.0 (P4)	All Projects	<p><b>9. Water Heater.</b> If a new water heater is being installed, will the Project include installation of a solar water heater? <i>Voluntary</i></p>	Yes <input type="checkbox"/> No <input checked="" type="checkbox"/> N/A <input type="checkbox"/>	_____ _____ _____

**Building Electrification**

CALGreen Code	New Construction	10. <b>All-Electric.</b> Will the Project be all-electric (i.e., does not include any new gas infrastructure), including lighting, heating, cooking, and water heating? <sup>2</sup>	Yes <input checked="" type="checkbox"/> No <input type="checkbox"/> N/A <input type="checkbox"/>	_____ _____ _____
CAP 2.0 (P2)	Additions and Renovations	11. <b>All-Electric Existing Buildings.</b> Will the Project upgrade existing residential and commercial buildings to be all-electric (e.g., air source heat pumps, heat pump water heaters, electric dryers, and induction stoves)? <a href="#">Rebates</a> may be available. <i>Voluntary</i>	Yes <input type="checkbox"/> No <input type="checkbox"/> N/A <input checked="" type="checkbox"/>	_____ _____ _____
CAP 2.0 (S1)	All Projects	12. <b>Refrigerant Management.</b> If new heating, ventilation, and air conditioning (HVAC) systems are being installed, does the project incorporate the lowest global warming potential (GWP) refrigerants for HVAC systems? <i>Voluntary</i>	Yes <input type="checkbox"/> No <input checked="" type="checkbox"/> N/A <input type="checkbox"/>	_____ _____ _____

<sup>2</sup> The Building Code includes limited exceptions including to commercial kitchens with a business-related need to cook with combustion equipment; industrial processes for labs, research, or educational related needs; and/or if the applicant establishes that there is not an all-electric prescriptive compliance pathway for the building under the California Building Energy Efficiency Standards and that the building is not able to achieve the performance compliance standard applicable to the building under the Energy Efficiency Standards.

**Vehicle Electrification**

<p align="center">CALGreen Code</p>	<p align="center">New Construction</p>	<p><b>13. EV Charging.</b> Will the Project install electric vehicle charging infrastructure as follows:</p> <ul style="list-style-type: none"> <li>• <u>SFR</u>: Two Level 2 EV Ready<sup>3</sup> spaces per unit</li> <li>• <u>ADU</u>: One Level 1 EV Ready space per unit (where parking is provided).</li> <li>• <u>Multi-family</u>: 15-percent of dwelling units shall provide one Level 2 EVCS<sup>4</sup> space, and 85-percent of dwelling units shall provide one Level 2 EV Ready<sup>5</sup>.</li> <li>• <u>Offices</u>: 20-percent of required parking spaces shall be Level 2 EVCS, and 30-percent shall be Level 2 EV Capable<sup>6</sup>.</li> <li>• <u>Hotels</u>: 5-percent of required parking spaces shall be Level 2 EVCS, 25-percent shall be Level 2 EV Ready, and 10-percent shall be Level 2 Capable.</li> <li>• <u>All other non-residential</u>: 10-percent of parking spaces shall be Level 2 EVCS, and 10-percent shall be Level 2 EV Capable.</li> </ul> <p>Indicate the plan sheet(s) where EV Charging information is provided.</p>	<p>Yes <input checked="" type="checkbox"/></p> <p>No <input type="checkbox"/></p> <p>N/A <input type="checkbox"/></p>	<p>SFR will be EV Ready</p> <hr/> <p>Will be shown on the electrical load calcs on EN1 sheet. Also will be denoted o the architectural plans.</p> <hr/> <hr/> <hr/> <hr/> <hr/> <hr/>
---	--	--	---	---

<sup>3</sup> EV Ready includes: Installation of raceway, adequate panel capacity, dedicated branch circuit, circuit breaker, and electrical components (e.g., 240-volt outlet). Level 2 must be capable of 8.3 kVa (208/240 volt, 40 amp), Low Level 2 must be capable of 4.1 kVa (208/240 volt, 20 amp), and Level 1 must a minimum of 2.2 kVa (110/120 volt, 20-amp).

<sup>4</sup> EVCS includes: Installation of raceway, adequate panel capacity, dedicated branch circuit, circuit breaker, and electrical components (e.g., 240-volt outlet). and vehicle supply equipment.

<sup>5</sup> Five Level 2 and/or Level 1 spaces can be substituted for each direct current fast charging (DCFC) station provided (i.e., a DCFC is a minimum of 48 kVA- 480 volt, 100-amp).

<sup>6</sup> EV Capable includes: Conduit installed and adequate panel capacity installed to accommodate future installation of a dedicated circuit and charging station.

**Transportation**

***Alternative Transportation***

<p style="text-align: center;">CAP 2.0 (P10) and Municipal Code (17.26)</p>	<p style="text-align: center;">New Construction (Commercial and Multifamily)</p>	<p><b>14. Transit Connections.</b> Will the project provide transit incentives as follows:</p> <ul style="list-style-type: none"> <li>• <u>Multi-family</u>: Comply with <a href="#">Municipal Code Chapter 17.26</a>. <i>Mandatory</i></li> <li>• <u>Non-residential</u>: If not proximate to transit stops, connect to transit via shuttle service, bike share, or other provided amenity to increase transit ridership. <i>Voluntary</i></li> </ul>	<p>Yes <input type="checkbox"/></p> <p>No <input type="checkbox"/></p> <p>N/A <input checked="" type="checkbox"/></p>	<hr/> <hr/> <hr/> <hr/>
<p style="text-align: center;">Municipal Code (18.88)</p>	<p style="text-align: center;">All Projects (Commercial and Multi- family)</p>	<p><b>15. Alternative Vehicle Parking.</b> Will the Project comply with Pleasanton Municipal Code Chapter 18.88 related to parking spaces designed to accommodate carpool, vanpool, and car-share vehicles? Indicate the plan sheet(s) where alternative vehicle parking information is provided.</p>	<p>Yes <input type="checkbox"/></p> <p>No <input type="checkbox"/></p> <p>N/A <input checked="" type="checkbox"/></p>	<hr/> <hr/> <hr/> <hr/>

***Active Transportation***

<p style="text-align: center;">CAP 2.0 (P8)</p>	<p style="text-align: center;">New Construction (Commercial and Multi- family)</p>	<p><b>18. Bicycle Amenities.</b> Will the Project include bicycle parking and/or protected bicycle storage as follows:</p> <ul style="list-style-type: none"> <li>• <u>Multi-family</u>: One short term bicycle parking space for every 3 units (minimum of two spaces); and one long-term space (e.g., lockers, shared/locked cages, etc.) for every 3 units.</li> <li>• <u>Non-residential</u>: Two short term bicycle parking spaces (e.g., bicycle racks) for each 9,000 square-feet of gross floor area (minimum of two spaces); and one long-term bicycle parking space (i.e., bicycle locker, enclosed storage, or racks within building) for each 9,000 square-feet of gross floor area</li> </ul>	<p>Yes <input type="checkbox"/></p> <p>No <input type="checkbox"/></p> <p>N/A <input checked="" type="checkbox"/></p>	<p>Bicycle Parking will be</p> <hr/> <p>provided in the park.</p> <hr/> <hr/> <hr/>
---	--	--	---	---

		<p>Additionally, for <u>offices</u>- will the Project include showers and changing areas as follows:</p> <ul style="list-style-type: none"> <li>• One shower facility for projects between 10,000 and 24,999 square-feet, two shower facilities for projects between 25,000 and 124,999, and four shower facilities for projects over 125,000 square feet.</li> <li>• One dressing area per shower facility</li> </ul> <p>Indicate the plan sheet(s) where bicycle amenities information is provided.</p>		
<b>Waste</b>				
<b><i>Materials Recycling &amp; Composting</i></b>				
Municipal Code (9.21)	New Construction and Additions/Alterations <sup>7</sup>	<p><b>19. Landfill Diversion.</b> Will the Project comply with Municipal Code Chapter 9.21 and achieve recycling or reuse of at least 90 percent of Portland cement concrete and asphalt concrete and at least 75 percent of the remaining construction and demolition debris, or the percentage established by the compliance official for a project pursuant to an exemption, of the total construction and demolition debris?</p>	Yes <input type="checkbox"/> No <input type="checkbox"/> N/A <input checked="" type="checkbox"/>	<hr/> <hr/> <hr/> <hr/>
Pleasanton CAP 2.0 (Strategy MC-1) and Municipal Code (9.20)	New Construction	<p><b>20. Waste Requirements.</b> Will the Project provide adequate recycling, compost, and landfill containers to meet SB 1383 and comply with <a href="#">Municipal Code Chapter 9.20</a>? Indicate the plan sheet(s) where waste container information is provided.</p>	Yes <input checked="" type="checkbox"/> No <input type="checkbox"/> N/A <input type="checkbox"/>	Plans are not yet available. <hr/> Project is in entitlement stage <hr/> <hr/> <hr/>

<sup>7</sup> All residential additions that create an increase in conditioned area, non-residential additions greater than 1,000 square-feet, demolition with a total value of \$25,000 or greater, and/or non-residential alternations/renovations with a total value of \$125,000 or greater.

**Green Materials**

CAP 2.0 (S6)	All Projects	21. <b>Embodied Carbon.</b> Will the Project include low carbon building materials (e.g., recycled concrete and metals) as part of construction? <i>Voluntary</i>	Yes <input type="checkbox"/> No <input type="checkbox"/> N/A <input checked="" type="checkbox"/>	There are no existing building materials on site. Rural land. <hr/> <hr/>
-----------------	--------------	---	--	--

**Water**

**Water Use Efficiency**

CAP 2.0 (P15)	All Projects	22. <b>Water Conservation.</b> Will the Project incorporate water-efficiency measures, including efficient water fixtures and climate adapted plantings? <a href="#">Rebates</a> may be available. <i>Voluntary</i>	Yes <input checked="" type="checkbox"/> No <input type="checkbox"/> N/A <input type="checkbox"/>	<hr/> <hr/> <hr/>
Municipal Code (17.14) and State WELO	All Projects	23. <b>Water Efficient Landscape.</b> If the project includes new landscape areas of greater than 500 square-feet or rehabilitated landscape areas of greater than 2,500 square-feet, will the Project comply with <a href="#">Municipal Code Chapter 17.14</a> and implement the City's Water Efficient <a href="#">Landscape</a> Ordinance (WELO)?	Yes <input checked="" type="checkbox"/> No <input type="checkbox"/> N/A <input type="checkbox"/>	<hr/> <hr/> <hr/>

**Water Recycling**

CAP 2.0 (S8)	All Projects	24. <b>Green Stormwater Infrastructure.</b> Will the Project incorporate green roofs, rainwater catchment, permeable pavement, bioretention areas, and/or other green stormwater infrastructure? <i>Voluntary</i>	Yes <input checked="" type="checkbox"/> No <input type="checkbox"/> N/A <input type="checkbox"/>	<hr/> <hr/> <hr/>
-----------------	--------------	---	--	-------------------

SF Bay Region Requirements	All Projects	25. <b>Stormwater Management.</b> For projects creating and/or replacing more than 2,500 square-feet of impervious surface, will the Project incorporate on-site stormwater management consistent with the NPDES permit and City <a href="#">stormwater management</a> requirements?	Yes <input checked="" type="checkbox"/> No <input type="checkbox"/> N/A <input type="checkbox"/>	_____ _____ _____
<b>Overall Sustainability</b>				
<b>Urban Forest</b>				
CAP 2.0 (P13)	All Projects	26. <b>Tree Planting.</b> If planting is proposed, will the Project include climate-adapted plantings? If trees are removed, will the Project include replacement climate-adapted trees? Indicate the plan sheet(s) where tree information is provided.	Yes <input checked="" type="checkbox"/> No <input type="checkbox"/> N/A <input type="checkbox"/>	Plans are not yet available. Project is in entitlement stage _____ _____
<b>Wildfire Prevention</b>				
CAP 2.0 (S9)	All Projects	27. <b>Wildfire Prevention and Preparation.</b> Will the Project incorporate a <a href="#">wildfire-defensible space</a> , <a href="#">fire hardening retrofits</a> , and commit to <a href="#">fire prevention</a> through site maintenance (e.g., regularly cleaning out rain gutters) and preparation? <i>Voluntary</i>	Yes <input type="checkbox"/> No <input type="checkbox"/> N/A <input checked="" type="checkbox"/>	The site is not within a wildfire designated area. _____ _____

# 1 INTRODUCTION

## 1.1 PURPOSE OF THE DOCUMENT

The purpose of this Biological Resource Analysis is to gather information necessary to complete a review of biological resources and potential Project effects to those resources under CEQA. The analysis herein considers the Project location in conjunction with proposed work activities to analyze potential Project-related impacts on the natural environment.

## 1.2 PROJECT LOCATION

The approximately 11.5-acre Project site is located in the City of Pleasanton, in Alameda County, California (the approximate center of the Project site is at 37.6602470°N. 121.8294637°W) (Figures 1 and 2). The Project site is bound to the northeast by Vineyard Avenue, the northwest by Thiessen Street, the southwest by an unnamed paved connector road with Old Vineyard Avenue just beyond, and the southeast by Manoir Lane. The Arroyo del Valle and Shadow Cliffs Regional Recreation Area are located just beyond Vineyard Avenue north of the Project site, while residential neighborhoods surround the Project site to the south, east, and west.

## 2 PROPOSED PROJECT

### 2.1 PROJECT OVERVIEW

The proposed Project includes the construction of an approximately 11.5-acre residential development with 27 townhome style residences, access roads, a 2.5-acre public park and landscaping, as well as stormwater quality basins (Figure 4). Project implementation would include the demolition and removal of vegetation, mass grading of the entire Project site, and construction of project components.

The Project would be constructed using typical site grading, site improvement, and Type 'I' concrete and Type 'III' wood-framed construction techniques per the California Building Code requirements. Project implementation would require the use of water trucks, scrapers, compactors, bulldozers, caterpillars, back-hoes, augers, concrete trucks, and assorted other hand tools and professional grade equipment. Crews would typically work during weekdays and daylight hours and be consistent with the City of Pleasanton's ordinances for construction.

### 2.2 SIGNIFICANCE THRESHOLDS FOR PROJECT IMPACTS

Potential impacts associated with implementation of the Project are addressed in the following sections. In accordance with Appendix G of the State CEQA Guidelines, Project-related impacts would be considered significant if the Project would result in one or more of the following effects:

- a. Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special-status species in local or regional plans, policies, or regulations, or by CDFW or USFWS; or
- b. Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations or by CDFW or USFWS; or
- c. Have a substantial adverse effect on federally protected wetlands as defined by Section 404 of the CWA (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means; or
- d. Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites; or
- e. Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan.

## 3 CURRENT SITE CONDITIONS

### 3.1 PERSONNEL AND SURVEY DATES

The Project site was initially surveyed on December 15 and 19, 2023 by Integral personnel Cameron Johnson and Luke Davies to determine the location and extent of potential waters of the U.S. and State (WOTUS). C. Johnson and L. Davies conducted meandering transects throughout the site to identify signs of wetland vegetation or hydrology, where additional site sampling may be required to demonstrate presence/absence of WOTUS. The Project site was then surveyed on April 4, 2024 by L. Davies and again on July 10 and December 5, 2024 when Integral personnel L. Davies and Sarah Beilman conducted a site visit to evaluate natural resources present on the Project site. These site assessments included reconnaissance level surveys of the Project site to characterize vegetation, topography and current and historic uses of the Project site. Observations made during the site visits were used to determine the potential for suitable habitat for special-status species (presence of habitat components necessary to support the species) and sensitive habitat types. Site surveys conducted in December of 2023 and 2024 included evaluations of the site for potential WOTUS. A total of six sample points were evaluated throughout the site to determine whether the vegetation, hydrology, and soils data supported a determination of wetland or non-wetland status using the methods outlined in the USACE 1987 Wetland Delineation Manual for the Arid west region.

### 3.2 LIMITATIONS AND ASSUMPTIONS THAT MAY INFLUENCE SURVEY RESULTS

All necessary portions of the Project site were accessible to the surveying biologists. Wildlife species, however, may be cryptic, generally difficult to detect, transient, nocturnal, or migratory species that may only occur within the Project site for short or fleeting time periods. Wildlife species may only be active during particular times of the year, such as the breeding season, or may only use the Project site temporarily. For these reasons, plant and wildlife species may be present but not observed. This limitation may influence the study results.

### 3.3 EXISTING CONDITIONS

The Project site is dominated by a non-native grassland field that is subject to regular disking. Thickets of coyote brush (*Baccharis pilularis*) occur throughout the northern portion of the site and several Northern California black walnut trees (*Juglans hindsii*) occur along the northeastern boundary of the Project site along Vineyard Avenue. A single small valley oak (*Quercus lobata*) recruit (<4 feet tall) occurs in the southeast corner of the site. The grassland is dominated by non-native grasses and forbs that are commonly found on disturbed sites, including slender wild oat (*Avena barbata*), soft chess (*Bromus hordeaceus*), and short podded

mustard (*Hirschfeldia incana*) (a full list of plant species observed onsite is included in Table 3). Two highly invasive species occur onsite - yellow star thistle (*Centaurea solstitialis*) and perennial pepperweed (*Lepidium latifolium*). Overall bare ground cover was low (5%) throughout the site, with the exception of the center of the western Project site boundary, which exhibited higher bare ground (65%) (likely due to increased foot and machinery traffic at this location).

The site exhibits a gentle north-facing slope, with elevations ranging between 390 and 420 feet above mean sea level. There are elevated mounds of dirt interspersed throughout the Project site, and active ground squirrel (*Otospermophilus beecheyi*) colonies occurred throughout the site.

In the northeast portion of the Project Site there is an approximately 200 square foot concrete slab. This area is dominated by the same non-native and upland herbaceous vegetation observed throughout the site, including slender wild oat, soft chess, short podded mustard, and bristly ox tongue (*Helminthotheca echioides*). Consistent with the rest of the Project site, the northeastern portion of the Project site did not exhibit evidence of ponding or extended inundation sufficient to develop wetland characteristics - no dominance of hydrophytic soils, no hydric soils, and no evidence of hydrology was observed.

In the southern portion of the site there is a culvert that directs flows from drain inlets within the unnamed connector road immediately south of the Project site northward where it outlets onto the onsite grassland. During Integral's December 15 and December 19, 2023 site visits, the area surrounding the outlet was investigated for evidence of waters of the U.S./State. The area surrounding the culvert outlet did not exhibit evidence of ponding or extended inundation sufficient to develop wetland characteristics - no dominance of hydrophytic soils, no hydric soils, and no evidence of hydrology was observed. During the winter of 2023 / spring of 2024, the Project proponent installed an approximately 100-square-foot riprap field at the outlet of the culvert to further dissipate flows onsite.

### **3.3.1 Waters of the U.S./State**

The Project site does not contain any waters or wetlands that would be regulated by the federal government or State of California.

### **3.3.2 Soils**

According to the Natural Resource Conservation Service (NRCS), two soil map units occur within the Study Area (NRCS 2024): Pleasanton Gravelly Loam which comprises 92% of the study area, and Yolo loam which comprises the remaining 8% of the study area. These soils are composed of alluvium derived from sandstone, shale, and other sedimentary rocks. Neither of these soil types have a frequency for flooding or ponding; they are not considered hydric. The

soils that were sampled are classified as 10YR3/2 and exhibited less than 1% redoximorphic features.

### **3.3.3 Hydrology**

The hydrology onsite is provided primarily by direct precipitation. The site is surrounded by curb and gutters and is not subject to sheet flow from offsite. Minor contributions to onsite hydrology are provided by flows from the unnamed southern connector road which are directed into the onsite grassland/riprap field via culvert.

## 4 POTENTIAL IMPACTS TO SPECIAL STATUS SPECIES

### 4.1 APPLICABLE LAWS

Special-status species include species considered to be rare by federal and/or state resource agencies (USFWS, National Marine Fisheries Service (NMFS), CDFW) and/or the scientific community (CNPS) and are accordingly legally protected pursuant to the federal, state, and/or local laws described below in addition to CEQA.

#### 4.1.1 Endangered Species Act of 1973

The Endangered Species Act of 1973 (referred to as the Federal Endangered Species Act [FESA]) prohibits the “take” of any wildlife species listed by the USFWS or NMFS (collectively referred to as the Services) as threatened or endangered, including the destruction of habitat that could hinder species recovery. The term “take” is defined by FESA as harass, harm, pursue, hunt, shoot, wound, kill, trap, capture, collect, or attempt to engage in any such conduct, with habitat protected under the “harm” and “harass” definitions. The USFWS and NMFS oversee the implementation of FESA (50 Code of Federal Regulations (CFR) § 402.7, Section 305(b)(4)(B)) and have regulatory authority over listed plants, wildlife, and fish. When species are listed as endangered or threatened under FESA, the federal government is also directed to designate critical habitat for these species. To remain compliant with the FESA, federal agencies, such as USACE, are required to consult with the resource agencies prior to issuance of a permit if a project may adversely affect a federally listed species. If USACE is able to determine the project would have no effect on a listed species (when there is no potential for presence of a listed species), no additional consultation is required.

The USFWS and NMFS administer the FESA and authorize exceptions to the take provisions through issuance of Biological Opinions in consultation with the federal action agency (e.g., USACE or the Federal Emergency Management Agency). The USFWS has primary responsibility for terrestrial and freshwater organisms, whereas the responsibilities of the NMFS are mainly marine wildlife, such as whales, and anadromous fish, such as salmon.

#### 4.1.2 Migratory Bird Treaty Act (MBTA)

The MBTA of 1918 (16 United States Code (U.S.C.) 703-712; Ch. 128; July 13, 1918; 40 Stat. 755; as amended in 1936; 1960, 1968, 1969, 1974, 1978, 1986, and 1998) (between the United States, Canada, Mexico, and Japan) prohibits the take (harass, harm, pursue, hunt, shoot, wound, kill, trap, capture, or collect, or attempt to engage in any such conduct) of any migratory bird or any part, nest, or egg of any such bird. The USFWS issues permits for take of migratory birds related to scientific collecting, banding and marking, falconry, raptor propagation, depredation, import, export, taxidermy, waterfowl sale and disposal, and special purposes.

### **4.1.3 California Endangered Species Act (CESA)**

The CESA prohibits the “take” of any wildlife species listed as endangered and threatened by the State of California. The term “take” is defined by Fish and Game Code Section 86 as hunt, pursue, catch, capture, or kill, or attempt to hunt, pursue, catch, capture, or kill. Section 2090 of the CESA requires state agencies to comply with regulations for protection and recovery of listed species and to promote conservation of these species. CDFW administers the CESA and authorizes exceptions to the take provisions through Section 2081 agreements (Incidental Take Permits) (except for designated “fully protected species”). Regarding rare plant species, the CESA defers to the California Native Plant Protection Act of 1977. Species that the California Fish and Game Commission has noticed as being under review for listing by CDFW are likewise given full CESA protection.

### **4.1.4 California Native Plant Protection Act and California Fish and Game Code (Plants)**

The CNPS designates California Rare Plants through a ranking system. Ranks 1A, 1B, and 2 meet the definitions established in Section 1901, Chapter 10 (Native Plant Protection Act of 1977) or Sections 2062 and 2067 of the CESA and are eligible for state listing. Some Rank 3 and 4 plants may fall under Section 15380 of the CEQA Guidelines.

### **4.1.5 California Fish and Game Code (Fully Protected Species)**

The State of California designated 37 species of wildlife that were rare or faced possible extinction with the classification of Fully Protected in the 1960s to provide additional protection to those species. To provide additional protections for wildlife that is rare or faces potential extinction, California Fish and Game Code Sections 3511, 4700, 5050, and 5515 designate “fully protected” status for specific birds, mammals, reptiles, amphibians, and fish. Fully protected species cannot be taken or possessed at any time and no licenses or permits can be issued for their take. Exceptions are established for scientific research collection, relocation of the bird species for the protection of livestock and take resulting from recovery activities for state-listed species.

### **4.1.6 California Fish and Game Code (Birds)**

California Fish and Game Code Section 3503 prohibits the take of nest or eggs of any bird. Raptors and other fully protected bird species are further protected in Sections 3503.5 and 3511, which state that these species or parts thereof may not be taken or possessed at any time.

### 4.1.7 CDFW Species of Special Concern

A species of special concern is an administrative designation given by CDFW to a native species that meets one or more of the following criteria: is extirpated from the state; is federally (but not state) listed; is experiencing, or formerly experienced, population declines or range restrictions; or has naturally small populations at high risk of declines. While this designation carries no legal status, CEQA Guidelines Section 15380 clearly indicates that species of special concern should be included in an analysis of project impacts.

## 4.2 METHODOLOGY

Information about special status species that could occur on the Project site was obtained from the following sources:

- CNDDDB RareFind 5 (CDFW 2024)
- CNPS Inventory of Rare, Threatened, and Endangered Plants of California (CNPS 2024)
- Inaturalist
- Bumble Bee Watch<sup>1</sup>
- Existing literature as cited in the text

The CNDDDB was used to query all special-status species with known occurrences within 3 miles of the Project site. A query of the CNPS Inventory of Rare, Threatened, and Endangered Plants of California was conducted for state and federally listed and candidate species, as well as CNPS-ranked species known to occur the same USGS 7.5-minute quadrangle as the Project site (Livermore quad), to determine additional special-status plants with potential to occur on the Project site.

The species identified in these searches were compiled in tables (Tables 1 and 2) and evaluated for likelihood of occurrence on the Project site. The potential for species to be adversely affected by the Project was classified as high, moderate, low, or none using the following definitions:

- **High:** The potential for a species to occur was considered high when the Project site was located within the range of the species, recorded observations were identified within known dispersal distance of the Project site, and suitable habitat was present on the Project site.

- **Moderate:** The potential for a species to occur was considered moderate when the Project site was located within the range of the species, recorded observations were identified nearby but outside known dispersal distance of the Project site, and suitable habitat was present on the Project site. A moderate classification was also assigned when recorded observations were identified within known dispersal distance of the Project site but habitat on the Project site was of limited or marginal quality.
- **Low:** The potential for a species to occur was considered low when the Project site was within the range of the species, but no recorded observations within known dispersal distance were identified, and habitat on the Project site was limited or of marginal quality. The potential for a species to occur was also classified as low when the Project site was located at the edge of a species' range and recorded observations were extremely rare, but habitat on the Project site was suitable.
- **None:** The potential for a species to occur was considered none when a species was not expected to occur within or adjacent to the Project site due to lack of suitable habitat and recorded observations within dispersal distance from the Project site.

### 4.3 SPECIAL-STATUS PLANTS IN VICINITY OF THE PROJECT SITE

According to the CNDDDB and the CNPS Inventory of Rare, Threatened, and Endangered Plants of California, a total of 13 special-status plant species are known to occur in the vicinity of the Project site. All of these species require specialized habitats that *do not* occur within the Project site's non-native grassland vegetation communities, including alkaline or mesic soils, and/or coastal scrub, chenopod scrub, chapparal, wetlands and vernal pools.

A brief description of each of these species is included within Appendix B (Table 1), including the species' status, habitat, and probability of occurring on the Project site.

### 4.4 SPECIAL-STATUS WILDLIFE IN VICINITY OF THE PROJECT SITE

According to the CNDDDB and existing literature, a total of 9 special-status wildlife species are known to occur in the vicinity of the Project site. A brief description of each of these species is included in Appendix B (Table 2), including the species' status, habitat, and probability of occurring within the Project site.

#### 4.4.1 *Special-Status Wildlife Not Expected to Occur on the Project Site*

Due to lack of suitable habitat and/or lack of regional population range overlap, 7 of the regionally known special-status wildlife species identified as occurring in the vicinity of the Project site are not expected to occur on the Project site.

#### **4.4.1.1 Lack of Suitable Habitat**

The non-native grassland present on the Project site do not provide necessary habitat components for these 6 special-status species, which require the following habitat types:

- Cliffs, tall structures, or large trees in open areas (American peregrine falcon [*alco peregrinus anatum*])
- Marshes, wet meadows, or emergent wetlands (tri-colored blackbird [*Agelaius tricolor*])
- Caves, crevices or hollowed out trees (Pallid bat [*Antrozous pallidus*] and Townsend's big-eared bat [*Corynorhinus townsendii*])
- Open grasslands with sufficient nectar sources and available (abandoned) burrows for nesting (Crotch's bumble bee [*Bombus crotchii*] and western bumble bee [*Bombus occidentalis*])

#### **4.4.1.2 Lack of Records Within Dispersal Distance of the Project Site**

The closest records for California red-legged frog (*Rana draytonii*) (CRLF) occur 2.3 miles (and greater) from the Project site (per records within the CNDDDB and iNaturalist). Several records for other common and special-status amphibians that can co-occur with CRLF occur in closer proximity to the Project site (per records within the CNDDDB and iNaturalist), and as such, the lack of records in this area is presumed to not be a function of lack of surveillance. The generally accepted dispersal range for CRLF is approximately 2.0 miles, which places the Project site outside of the dispersal range for the locally extant CRLF population. While technically potentially suitable CRLF upland dispersal habitat occurs onsite, this species is not expected to occur onsite due to excessive distance from proximal extant records.

### **4.4.2 Special-Status Wildlife with Potential to Occur on the Project Site**

#### **4.4.2.1 Burrowing Owl**

The open grassland and ground squirrel burrows on the Project site provide the necessary nesting habitat components for burrowing owl (*Athene cunicularia*), which is known to occur in the vicinity of the Project site. The Project site could potentially support breeding burrowing owls.

#### **4.4.2.2 California Tiger Salamander**

The Project site provides suitable upland dispersal habitat for California tiger salamander (*Ambystoma californiense*) (CTS) within dispersal proximity of suitable breeding habitat. A CTS breeding pond has been reported within the Shadow Cliffs Regional Recreation Area proximal

to the Project site (no exact location reported) in 1992 (CNDDDB Occurrence No. 530), however, this record is considered potentially extirpated. While no extant CTS breeding records occur within 1.3 miles of the Project site (generally accepted dispersal range for CTS), a freshwater pond (suitable breeding habitat) is documented occurring therein, and several records for juveniles and adults dispersing also occur within that that range. The closest record for dispersing adults occurs approximately 0.5 mile from the Project site on Vineyard Avenue (CNDDDB Occurrence 169). As such, the project site provides potentially suitable upland dispersal habitat for CTS, and presence of CTS cannot be ruled out in the absence of protocol surveys.

#### **4.4.2.3 Nesting Birds**

The grassland and the onsite shrubs and trees provide suitable nesting habitat for a variety of birds including ground-, shrub-, and small tree-nesting passerines and raptors. No nests have been observed onsite, however, owing to the mobile nature of birds and the seasonality of their nesting cycle, and in light of the presence of abundant suitable nesting habitat onsite, it is possible that birds could nest on the Project site during future nesting seasons.

### **4.5 IMPACT ASSESSMENT**

#### **4.5.1 Special-Status Plants**

Project implementation would not result in impacts to special-status plants.

#### **4.5.2 Special-Status Wildlife**

##### **4.5.2.1 Burrowing Owl**

As part of the site preparation activities, the Project site would be graded and compacted, resulting in permanent impacts to potentially suitable burrowing owl habitat. Implementation Mitigation Measure BIO-1, which requires preconstruction burrowing owl surveys as well as monitoring of any burrowing owl nests observed onsite until a qualified biologist determines that nesting is complete and young have fledged, would reduce impacts to burrowing owls to a level considered less than significant pursuant to CEQA through avoidance and minimization of impacts to species.

##### **4.5.2.2 California Tiger Salamander**

As part of the site preparation activities, the Project site would be graded and compacted, resulting in permanent impacts to potentially suitable CTS upland dispersal habitat. Implementation Mitigation Measure BIO-2, which requires protocol surveys for CTS in the year

prior to Project implementation and installation of wildlife exclusion fencing around the Project site prior to Project commencement, would reduce impacts to CTS to a level considered less than significant pursuant to CEQA through avoidance and minimization of impacts to species.

#### **4.5.2.3 Nesting Birds**

As part of the site preparation activities, the Project site would be graded and compacted, and onsite shrubs, trees, and herbaceous/grass vegetation would be removed, resulting in permanent impacts to suitable nesting bird habitat. Implementation Mitigation Measure BIO-3, which requires preconstruction nesting bird surveys as well as monitoring of any nests observed onsite until a qualified biologist determines that nesting is complete and young have fledged, would reduce impacts to burrowing owls to a level considered less than significant pursuant to CEQA through avoidance and minimization of impacts to species.

## 5 POTENTIAL IMPACTS TO SPECIAL-STATUS HABITATS

### 5.1 APPLICABLE LAWS

Special status species habitats are regulated by state and federal resource agencies (CDFW) and are accordingly legally protected via the federal and/or state laws defined below in addition to CEQA.

#### 5.1.1 Section 404 Clean Water Act (CWA)

Section 404 of the CWA, administered by USACE, establishes a program to regulate the discharge of dredged or fill material into waters of the United States, including open water. Per Section 404, a permit is required prior to discharge of fill material into waters of the United States, unless the activity is exempt from Section 404 regulation.

Waters of the United States generally include tidal waters, lakes, ponds, rivers, streams (including intermittent streams), and wetlands. Other waters are non-tidal, perennial, and intermittent watercourses and tributaries to such watercourses [33 C.F.R. 328.3(a), 51 F.R. 41250, November 13, 1986].

#### 5.1.2 National Pollutant Discharge Elimination System (NPDES) Permit Program

The NPDES Permit Program, also authorized by the CWA, controls water pollution by regulating point sources (discrete conveyances such as pipes or constructed ditches) that discharge pollutants into waters of the United States. The implementation of this federal program has been charged to the State of California for implementation through the SWRCB and Regional Water Quality Control Boards (Regional Water Board). In California, NPDES permits are also referred to as waste discharge requirements (WDR) that regulate discharges to waters of the United States.

Also implemented by the Regional Water Board is the Municipal Storm Water Permitting Program, which regulates storm water discharges from municipal separate storm sewer systems (MS4s). The MS4 Permit Program was established to restore and maintain the chemical, physical, and biological integrity waters of the U.S./State and reduce/eliminate storm water pollution.

#### 5.1.3 Section 401 Clean Water Act (CWA)

The SWRCB and its nine regional water boards have been charged with the protection and enhancement of water quality in the state of California. Pursuant to the Porter Cologne Water

Quality Control Act (Porter Cologne), waters of the State are defined as “any surface water or groundwater, including saline waters, within the boundaries of the state.” This is generally taken to include all waters of the U.S., all surface waters not considered to be waters of the U.S. (non-jurisdictional wetlands), groundwater, and territorial seas (with territorial boundaries extending 3.0 nautical miles beyond outermost islands, reefs, and rocks and includes all waters between the islands and the coast). Per Porter Cologne, the Regional Water Board has authority to regulate discharges of fill and dredged material into Waters of the State.

#### **5.1.4 FESA**

When species are listed as endangered or threatened under FESA, the federal government is also directed to designate critical habitat for these species. Critical habitat is designated by the Services to protect areas that are essential to the survival of federally listed wildlife species. Under FESA, critical habitat is defined as a “specific geographic areas that contain features essential to the conservation of an endangered or threatened species and that may require special management and protection.” When designating critical habitat, the Services focused on the principal biological or physical features in the defined area that are essential to the conservation of the listed species. These features are termed primary constituent elements. The 2016 critical habitat regulations (81 FR 7214, Feb. 11, 2016, codified at 50 CFR 402.02) replaced this term with physical or biological features (PBFs). The FESA requires Federal agencies to use their authorities to conserve endangered and threatened species and to consult USFWS and/or NMFS about actions that they carry out, fund, or authorize to ensure that they will not destroy or adversely modify critical habitat.

## **5.2 METHODOLOGY**

Information about aquatic resources and special-status habitats that could occur on the Project site was obtained from the following sources:

- Integral site visit (July 2024, see Section 3.1)
- CNDDDB RareFind 5 (CDFW 2024)
- USFWS Critical Habitat shapefiles
- Existing literature as cited in the text

The CNDDDB was used to query all special-status habitats with known occurrences within 3 miles surrounding the Project site. USFWS shapefiles were used to map critical habitat in the vicinity of the Project site.

### 5.3 AQUATIC RESOURCES

The Project site does not support any potentially jurisdictional WOTUS under the jurisdiction of the USACE pursuant to the CWA (Section 404) or under the jurisdiction of the State Water Quality Control Board pursuant to the CWA (Section 401) and Porter Cologne.

### 5.4 CRITICAL HABITAT

No designated critical habitat occurs on or in the vicinity of the Project site.

### 5.5 WILDLIFE CORRIDORS AND NURSERY SITES

The Project site does not act as a wildlife corridor or a nursery site. A wildlife corridor is a portion of land that adjoins two or more larger areas of similar natural environment, often connecting wildlife populations separated by natural or created activities, disturbances, or structures. Wildlife corridors are used for dispersal and migration of wildlife, allowing for genetic exchange, population growth, and access to larger stretches of suitable habitats, and reducing habitat fragmentation. While the Project site provides marginal resting and roosting habitat, it is regularly disturbed, is surrounded on three sides by developed landscapes, and does not offer the necessary protection or resources required to be considered a wildlife corridor.

A nursery site is an area where juveniles occur at higher densities, avoid predation more successfully, or grow faster there than in a different habitat (Beck et. al. 2001). The Project site exhibits no evidence of being a nursery site. As an urban infill site, subject to regular disturbance, the Project site is not buffered from the adjacent urban landscape, and does not provide enhanced protection, foraging habitat, or nesting/roosting substrates that would be components of nursery sites. While suitable nesting bird habitat occurs onsite, the highly disturbed condition of the Projects site, in addition to its location within a developed and disturbed setting preclude its use as a nursery site.

### 5.6 SENSITIVE NATURAL COMMUNITIES

No Sensitive Natural Communities occur on the Project site. According to the CNDDDB, a single Sensitive Natural Community occur in the vicinity of the Project site, Sycamore Alluvial Woodland, however presence of this community was summarily dismissed as no sycamores (*Platanus racemosa*) occur on or adjacent to the Project site. A single, small oak recruit occurs onsite and does not merit consideration for inclusion as a component of any Sensitive Natural Communities. However, Northern California black walnut (also referred to as Hind's walnut), a component of the Hinds' Walnut and Related Stands Sensitive Natural Community (Code 61.810.02), occurs in the northeastern corner of the Project site. The collective definition of

Juglans hindsii and Hybrids Forest & Woodland Special Stands and Semi-Natural Alliance (i.e., Hinds's walnut and related stands) provided by CNPS<sup>2</sup> includes Northern California black walnut co-occurring with native trees (including *Populus fremontii*, *Quercus lobata* and *Salix gooddingii*) and shrubs (including *Salix exigua* or *Sambucus nigra*) within intermittently flooded or saturated riparian corridors; floodplains, stream banks, and terraces. The six walnut trees that occur along Vineyard Avenue do not co-occur with any native trees or shrubs, and the Project site does not occur within a riparian corridor, floodplain, streambank, or terrace. Accordingly, the plant community associated with the Hinds's Walnut and Related Stands community does not occur onsite.

## 6 APPLICABLE LOCAL PLANS, ORDINANCES, AND LAWS

### 6.1 CITY OF PLEASANTON GENERAL PLAN 2005 – 2025

The General Plan was adopted by the City of Pleasanton in 2009 and updated in 2019. The General Plan is the guiding document for development within the City of Pleasanton and addresses issues related to land use, circulation, housing, public safety, conservation, open space, noise, public facilities and community programs, water, air quality, energy, community character, economic and fiscal, and subregional planning through Goals and Policies that are required for projects within the City of Pleasanton Planning Area. Within the City of Pleasanton Planning Area is the designated Urban Growth Boundary which distinguishes areas generally suitable for urban development from areas generally suitable for long-term open-space protection. The Project site is on the edge (but within) of the Urban Growth Boundary. The following elements of the General Plan are relevant to development of the Project site regarding biological resource constraints.

#### 6.1.1 Conservation and Open Space Element

The purpose of the Conservation and Open Space Element is to conserve and manage natural resource and open space areas for the preservation, production, and enjoyment of natural and cultural resources, and for the promotion of open space recreation, protection of public health and safety, and preservation of valuable wildlands. The following goals of this element are relevant to the development of the Project site regarding biological resource constraints:

**Goal 2: Preserve and enhance the natural resources of the Planning Area, including plant and wildlife habitats, heritage trees, scenic resources, and watercourses.**

#### 6.1.2 Water Element

The main purpose of the Water Element is to consolidate information and policies related to the conservation and management of water resources, riparian corridors, and watershed lands. The following goals of this element are relevant to the development of the Project site regarding biological resource constraints:

**Goal 1: Preserve and protect water resources and supply for long-term sustainability**

**Goal 2: Provide healthy water courses, riparian functions, and wetlands for humans, wildlife, and plants.**

**Goal 6: Minimize stormwater runoff and provide adequate stormwater facilities to protect property from flooding.**

**Goal 7: Reduce stormwater runoff and maximize infiltration of naturally occurring rainwater so as to improve surface and subsurface water quality.**

## **6.2 EAST ALAMEDA CONSERVATION STRATEGY**

The East Alameda County Conservation Strategy (hereafter, Conservation Strategy) is intended to provide an effective framework to protect, enhance, and restore natural resources in eastern Alameda County, while improving and streamlining the environmental permitting process for impacts resulting from infrastructure and development projects. The Conservation Strategy focuses on impacts on biological resources such as endangered and other special-status species as well as sensitive habitat types (e.g., wetlands, riparian corridors, rare upland communities). Within the Conservation Strategy are specific conservation zones (CZs) that were developed to identify locations for conservation actions in areas with the same relative ecological function as those areas where impacts occur. The Vineyard Project site is within Conservation Zone 2 (CZ-2). Per the Conservation Strategy the following Conservation Goals that are relevant to the Project site the proposed Project regarding biological resource constraints are:

### **Goal 14 – California Tiger Salamander**

Objective 14.1. *Avoid and minimize direct impacts on California tiger salamander (mortality of individuals and loss of occupied aquatic or upland habitat) during project construction and indirect impacts that result from postproject activities by implementing avoidance and minimization measures outlined in the Conservation Strategy.*

Objective 14.2. *Protect existing California tiger salamander populations and allow for expansion of metapopulations.*

While CTS were not observed during the site visits conducted in 2023 and 2024, potentially suitable CTS upland and dispersal habitat does occur onsite. Implementation of Mitigation Measure BIO-2, which requires preconstruction protocol presence/absence surveys, as well as wildlife exclusion fencing, and consultation with CDFW and USFWS if CTS is found on site is consistent with EACCS objectives for CTS.

### **Goal 19 – Burrowing Owl**

Objective 19.1. *Avoid direct impacts on burrowing owls (mortality of individuals and loss of nests) during project construction or post project activities by implementing avoidance measures outlined in the Conservation Strategy.*

Objective 19.2. *Avoid and minimize direct loss of burrowing owl habitat (loss of breeding and non-breeding habitat) during project construction and indirect impacts that result from post project activities by implementing avoidance measures outlined in the Conservation Strategy.*

Objective 19.3. *Protect and monitor all burrowing owl nest sites, including surrounding foraging habitat, in the study area.*

While Burrowing owls were not observed during the site visits conducted in 2023 and 2024, potentially suitable burrowing owl habitat does occur onsite. Implementation Mitigation Measure BIO-1, which requires preconstruction burrowing owl surveys as well as monitoring of any burrowing owl nests observed onsite until a qualified biologist determines that nesting is complete and young have fledged, is consistent with EACCS objectives for burrowing owl.

### **6.3 CITY OF PLEASANTON TREE PRESERVATION ORDINANCE**

The City of Pleasanton's tree preservation ordinance (City Code of Ordinances: Chapter 17.16 – Tree Preservation) contains provisions pertaining to the removal of trees on properties that are set to be developed. There are native trees that occur on the Project site, therefore the city may require the project applicant to provide a tree survey plan, including all trees which will be affected by the new development. The city may also require the project applicant to provide a tree report by a certified consulting arborist. The project will comply with any and all requirements set forth by the City of Pleasanton and the Tree Preservation Ordinance.

## 7 MITIGATION MEASURES

Potential impacts associated with implementation of the proposed Project are addressed below. With implementation of the specific mitigation measures recommended below, all Project-related impacts to natural resources can be reduced to a level considered less than significant.

### 7.1 BIOLOGICAL IMPACT 1: BURROWING OWLS

The Project site provides potentially suitable nesting habitat for Burrowing owls. Project-related activities could potentially result in take of owls in the form of disturbance causing nest abandonment or destruction. The mitigation measure presented below would reduce these impacts to a level considered less than significant pursuant to CEQA.

#### 7.1.1 Mitigation Measure BIO-1

No less than 60 days prior to the start of Project-related activities, a burrowing owl habitat assessment shall be conducted by a qualified biologist according to the specifications of the Staff Report on Burrowing Owl Mitigation (Department of Fish and Game, March 2012 or most recent version). If the habitat assessment demonstrates suitable burrowing owl habitat occurs onsite, then a minimum of two preconstruction burrowing owl surveys shall be conducted no less than 14 days prior to the start of Project-related activities and again within 24 hours prior to ground disturbance, in accordance with the Staff Report on Burrowing Owl Mitigation (2012 or most recent version). Preconstruction surveys shall be performed by a qualified biologist following the recommendations and guidelines provided in the Staff Report on Burrowing Owl Mitigation.

If the preconstruction surveys confirm occupied burrowing owl habitat, Project activities shall be immediately halted. The qualified biologist shall coordinate with CDFW and prepare a Burrowing Owl Plan that shall be submitted to CDFW for review and approval prior to commencing Project activities. The Burrowing Owl Plan shall describe proposed avoidance, monitoring, relocation, minimization, and/or mitigation actions. The Burrowing Owl Plan shall include the number and location of occupied burrow sites, acres of burrowing owl habitat that will be impacted, details of site monitoring, and details on proposed buffers and other avoidance measures if avoidance is proposed. If impacts to occupied burrowing owl habitat or burrow cannot be avoided, the Burrowing Owl Plan shall also describe minimization and compensatory mitigation actions that will be implemented. Proposed implementation of burrow exclusion and closure should only be considered as a last resort, after all other options have been evaluated as exclusion is not in itself an avoidance, minimization, or mitigation method and has the possibility to result in take. The Burrowing Owl Plan shall identify compensatory mitigation for the temporary or permanent loss of occupied burrow(s) and habitat consistent with the "Mitigation Impacts" section of the 2012 Staff Report and shall

implement CDFW-approved mitigation prior to initiation of Project activities. If impacts to occupied burrows cannot be avoided, information shall be provided regarding adjacent or nearby suitable habitat available to owls. If no suitable habitat is available nearby, details regarding the creation and funding of artificial burrows (numbers, location, and type of burrows) and management activities for relocated owls shall also be included in the Burrowing Owl Plan. The Project proponent shall implement the Burrowing Owl Plan following CDFW review and approval.

## **7.2 BIOLOGICAL IMPACT 2: CALIFORNIA TIGER SALAMANDER**

The Project site provides potentially suitable dispersal habitat for CTS. The mitigation measure presented below would reduce potential impacts to CTS to a level considered less than significant pursuant to CEQA.

### **7.2.1 Mitigation Measure BIO-2**

Protocol presence/absence surveys for CTS (drift-fence surveys) shall be conducted by qualified biologists in the year prior to commencement of Project activities. If no CTS are observed during these protocol surveys, wildlife exclusion fencing shall be installed upon removal of the drift fence survey array, and the construction activities may commence as planned. If CTS are observed onsite during protocol-level surveys, or if protocol-level surveys cannot be conducted, CDFW and USFWS shall be consulted, and all compensatory mitigation requirements and additional avoidance and minimization measures (AMMs) identified by CDFW and USFWS shall be implemented. Work will be avoided within suitable habitat from October 15 (or the first measurable fall rain of 1" or greater, to May 1. If consulted, CDFW and USFWS may require AMMs such as Worker Environmental Awareness Training, ongoing preconstruction surveys, biological construction monitoring, and capture/relocation of individual CTS observed onsite. Final AMMs would be determined by CDFW and USFWS.

## **7.3 BIOLOGICAL IMPACT 3: NESTING BIRDS**

The onsite vegetation and structures provide suitable nesting habitat for various birds protected pursuant to the Migratory Bird Treaty Act and California Fish and Game Code, Sections 3503, 3503.5, and 3511. Project-related activities could result in take of protected birds in the form of disturbance causing nest abandonment or destruction. The mitigation measure presented below would reduce these impacts to a level considered less than significant pursuant to CEQA.

### 7.3.1 Mitigation Measure BIO-3

Vegetation removal or ground disturbance (collectively referred to as construction activities) shall be scheduled to avoid the bird nesting season to the greatest extent possible. The nesting season for most birds and raptors in the San Francisco Bay Area is February 1 through September 15.

If construction activities cannot be scheduled to occur between September 16 and January 31, pre-construction surveys for nesting birds and raptors shall be completed by a qualified ornithologist or biologist to ensure that no nests shall be disturbed during project implementation. This survey shall be completed no more than 5 days prior to the initiation of construction activities. During this survey, the qualified ornithologist/biologist shall inspect all suitable nesting habitat on the Project site and within the zone of influence (the area immediately surrounding the Project site that supports suitable nesting habitat that could be impacted by the proposed Project due to visual or auditory disturbance associated with the removal of vegetation and construction activities scheduled to occur during the nesting season). If no nesting birds are observed during the survey, the construction activities may commence as planned. Nesting bird surveys shall be repeated if there is a lapse in Project activities of seven days or more.

If an active nest is found, the qualified ornithologist/biologist shall determine an appropriately sized species-specific buffer around the nest in which no work will be allowed until the young have successfully fledged. In general, buffer sizes of 200 feet for raptors and 50 feet for other birds should suffice to prevent disturbance to birds nesting in the urban environment, but these buffer sizes may be increased or decreased, as appropriate, depending on the bird species and the level of disturbance anticipated near the nest. The construction contractor shall establish a construction free buffer zone around the nest as determined by the qualified ornithologist/biologist to ensure that migratory bird and raptor nests shall not be disturbed during project construction. This buffer shall remain in place until such a time as the young have been determined (by a qualified ornithologist/biologist) to have fledged. Any birds that begin nesting amid construction activities shall be assumed to be habituated

**Table 1. Special-Status Plant Species Known to Occur of the Vicinity of the Vineyard Project site**

Common Name	Scientific Name	Status	Habitat Type/Components	Occurrence Information	Probability of Occurring on the Project site
<b>Lesser Saltscare</b>	<i>Atriplex minuscula</i>	CNPS Rank 1B.1	Alkaline, sandy soils in chenopod scrub, playas, and valley and foothill grassland	CNPS 1 Quad Search	<b>None.</b> The onsite soils do not provide suitable habitat for this species.
<b>Alkali Milk-vetch</b>	<i>Astragalus tener</i> <i>var. tener</i>	CNPS Rank 1B.2	Alkaline soils in vernal wet playas, valley and foothill grassland, and vernal pools	CNPS 1-Quad Search	<b>None.</b> The onsite soils do not provide suitable habitat for this species.
<b>Crownscale</b>	<i>Atriplex coronata</i> <i>var. coronata</i>	CNPS Rank 4.2	Seasonally dry saline wetlands with alkaline soils, including alkali vernal meadows and shallow parts of alkali vernal pools; saline-sodic depressions including alkali sink scrub, growing with other salt desert shrubs and forbs	CNPS 1 Quad Search	<b>None.</b> The onsite soils and non-native grassland communities do not provide suitable habitat for this species
<b>Brittlescale</b>	<i>Atriplex depressa</i>	CNPS Rank 1B.2	Alkaline clays in chenopod scrub, meadows and seeps, playas, valley and foothill grassland, and vernal pools	CNPS 1 Quad Search	<b>None.</b> The onsite soils do not provide suitable habitat for this species.
<b>Congdon's Tarplant</b>	<i>Centromadia parryi</i> <i>ssp. congdonii</i>	CNPS Rank 1B.1	Seasonal wetlands on heavy clay, saline, or alkaline soils in grasslands and disturbed sites	The closest record for this species is located approximately 2.8 miles north of the Project site (CNDDDB Occurrence No. 11).	<b>None.</b> The onsite do not provide suitable habitat for this species.
<b>Palmate-bracted bird's beak</b>	<i>Chloropyron palmatum</i>	Federal Endangered California Endangered CNPS Rank 1B.1	Alkaline soils in chenopod scrub, valley and foothill grassland	CNPS 1 Quad Search	<b>None.</b> The onsite soils do not provide suitable habitat for this species.
<b>San Joaquin spearscale</b>	<i>Extriplex joaquinana</i>	CNPS Rank 1B.2	Alkaline soils in chenopod scrub, meadows and seeps, playas, valley and foothill grassland	The closest record for this species is located approximately 2.8 miles northwest of the Project site (CNDDDB Occurrence No. 35).	<b>None.</b> The onsite soils do not provide suitable habitat for this species.
<b>Ferris' goldfields</b>	<i>Lasthenia ferrisae</i>	CNPS Rank 4.2	Alkaline, clay, and vernal pools	CNPS 1 Quad Search	<b>None.</b> The onsite soils and non-native grassland communities do not provide suitable habitat for this species.

<b>Prostrate vernal pool navarretia</b>	<i>Navarretia prostrata</i>	CNPS Rank 1B.2	Coastal scrub, Meadows and seeps, Valley and foothill grassland (alkaline), Vernal pools	CNPS 1 Quad Search	<b>None.</b> The onsite soils and non-native grassland communities do not provide suitable habitat for this species.
<b>Hairless popcornflower</b>	<i>Plagiobothrys glaber</i>	CNPS Rank 1A	Marshes and swamps (coastal salt), Meadows and seeps (alkaline)	CNPS 1 Quad Search	<b>None.</b> The onsite soils and non-native grassland communities do not provide suitable habitat for this species.
<b>Long-styled sand-spurrey</b>	<i>Spergularia macrotheca var. longistyla</i>	CNPS Rank 1B.2	Marshes and swamps, Meadows and seeps (alkaline)	The closest record for this species is located approximately 2.4 miles east of the Project site (CNDDDB Occurrence No. 2).	<b>None.</b> The onsite soils and non-native grassland communities do not provide suitable habitat for this species.
<b>Saline Clover</b>	<i>Trifolium hydrophilium</i>	CNPS Rank 1B.2	Marshes and swamps, Valley and foothill grassland (mesic, alkaline), Vernal pools	CNPS 1 Quad Search	<b>None.</b> The onsite soils and non-native grassland communities do not provide suitable habitat for this species.
<b>Caper-fruited tropidocarpum</b>	<i>Tropidocarpum capparideum</i>	CNPS Rank 1B.1	Valley and foothill grassland (alkaline hills)	The closest record for this species is located approximately 1.7 miles east of the Project site (CNDDDB Occurrence No. 11).	<b>None.</b> The onsite soils do not provide suitable habitat for this species.

**Table 2. Special-Status Wildlife Species Known to Occur in the Vicinity of the Vineyard Project Site Project site**

Scientific Name	Common Name	Status	Habitat Type/Components	Occurrence Information	Probably of Occurring on the Project site
<b>Tricolored Blackbird</b>	<i>Agelaius tricolor</i>	California Species of Special Concern	Nests in emergent wetland with tall, dense cattails or tules, or thickets of willow, blackberry, or tall herbs	A record for this species occurs in the vicinity of the Project site (CNDDDB Occurrence No. 256), however exact location is unknown.	<b>None.</b> The onsite grassland vegetation community does not provide suitable habitat for this species.
<b>California tiger salamander – central California DPS</b>	<i>Ambystoma californiense pop. 1</i>	Federally Endangered California Threatened	Grasslands adjacent to seasonal wetlands and ponds	The closest record for this species occurs approximately 0.6 miles east of the Project site (CNDDDB Occurrence No. 169).	<b>Low.</b> The Project site provides suitable upland dispersal habitat in proximity to several suitable breeding ponds and several records for dispersing adult salamanders.
<b>Pallid bat</b>	<i>Antrozous pallidus</i>	California Species of Special Concern	Dry rocky areas in grasslands, shrubland, woodlands, and forests with caves, crevices, and/or hollow trees	The closest record for this species is located approximately 2.3 miles south of the Project site (CNDDDB Occurrence No. 105).	<b>None.</b> The onsite grassland vegetation community does not provide suitable habitat for this species.
<b>Burrowing owl</b>	<i>Athene cunicularia</i>	California Species of Special Concern	Open, dry grassland and desert habitats, and in grass, forb and open shrub habitats, with California ground squirrel ( <i>Otospermophilus beecheyi</i> ) burrows	The closest record for this species is located approximately 1.8 miles north of the Project site (CNDDDB Occurrence No. 457).	<b>Low.</b> While no records for burrowing owls occur in the proximal portion of Pleasanton, the Project site provides suitable nesting habitat for this highly mobile species.
<b>Crotch's bumble bee</b>	<i>Bombus crotchii</i>	California Candidate Endangered	Hot and dry grasslands and shrublands historically from California south to Baja California del Norte, Mexico. Nests in underground cavities.	An historic record (1932) for this species occurs in the general vicinity of Pleasanton (CNDDDB Occurrence No. 17). Exact location is unknown.  No occurrences for this species have been recorded in alternative diversity tracking databases such as iNaturalist or Bumblebee Watch.	<b>None.</b> The regularly disturbed grassland community on the Project site provides insufficient foraging habitat and poor nesting habitat.
<b>Western bumble bee</b>	<i>Bombus occidentalis</i>	California Candidate Endangered	Open grassy areas, urban parks and gardens, chaparral and shrub areas, mountain meadows. Nests in underground cavities on open slopes within meadows and grasslands.	An historical record (1952) for this species occurs in the general vicinity of Pleasanton (CNDDDB Occurrence No. 230). Exact location is unknown.  No occurrences for this species have been recorded in alternative diversity	<b>None.</b> The regularly disturbed grassland community on the Project site provides insufficient foraging habitat and poor nesting habitat.

				tracking databases such as iNaturalist or Bumblebee Watch.	
<b>Townsend's big-eared bat</b>	<b><i>Corynorhinus townsendii</i></b>	California Species of Special Concern	Mesic habitats with brush and caves	The closest record for this species is located approximately 2 miles southwest of the Project site (CNDDDB Occurrence No. 422).	<b>None.</b> The onsite grassland vegetation community does not provide suitable habitat for this species.
<b>American peregrine falcon</b>	<b><i>Falco peregrinus anatum</i></b>	California Fully Protected	Nests on high cliffs using a scrape on a depression or ledge in an open site (sometimes on human-made structures)	The closest record for this species is located approximately 2.3 miles south of the Project site (CNDDDB Occurrence No. 43).	<b>None.</b> The onsite ruderal vegetation communities do not provide suitable habitat for this species.
<b>California red-legged frog</b>	<b><i>Rana draytonii</i></b>	Federally Threatened California Species of Special Concern	Grassland and riparian habitats adjacent to creeks/streams with plunge pools or ponds	The closest record for this species occurs approximately 2.3 miles southeast of the Project site (CNDDDB Occurrence No. 449).	<b>None.</b> While the Project site provides marginal upland dispersal habitat, no records for this species occur within dispersal distance from the Project site.

**Table 3. Plant Species Observed on the Project Site**

<b>Scientific Name</b>	<b>Common Name</b>
<i>Asclepias fascicularis</i>	Narrowleaf milkweed
<i>Avena barbata</i>	Slender wild oat
<i>Baccharis pilularis</i>	Coyote brush
<i>Bromus hordeaceus</i>	Soft chess
<i>Centaurea solstitialis</i>	Yellow star thistle
<i>Croton setiger</i>	Turkey-mullein
<i>Dittrichia graveolens</i>	Stinkwort
<i>Eschscholzia californica</i>	California poppy
<i>Festuca myuros</i>	Rattail sixweeks grass
<i>Hirschfeldia incana</i>	Short podded mustard
<i>Hordeum murinum</i>	Foxtail barley
<i>Juglans hindsii</i>	Northern California black walnut
<i>Juncus bufonius</i>	Toad rush
<i>Kickxia elatine</i>	Sharpleaf cancerwort
<i>Lepidium latifolium</i>	Perennial pepperweed
<i>Polygonum aviculare</i>	Knotweed
<i>Quercus lobata</i>	Valley oak
<i>Raphanus sativus</i>	Wild radish
<i>Rumex acetosella</i>	Sheep sorrel
<i>Rumex crispus</i>	Curly dock

**Table 4. Wildlife Species Observed on the Project Site**

<b>Scientific Name</b>	<b>Common Name</b>
<i>Aphelocoma californica</i>	California scrub jay
<i>Cathartes aura</i>	Turkey vulture
<i>Corvus brachyrhynchos</i>	American crow
<i>Euphagus cyanocephalus</i>	Brewer's blackbird
<i>Haemorhous mexicanus</i>	House finch
<i>Melanerpes formicivorus</i>	Acorn woodpecker
<i>Molothrus ater</i>	Brown-headed cowbird
<i>Otospermophilus beecheyi</i>	California ground squirrel
<i>Petrochelidon pyrrhonota</i>	Cliff swallow
<i>Sceloporus occidentalis</i>	Western fence lizard
<i>Sialia mexicana</i>	Northern mockingbird
<i>Spinus psaltria</i>	Lesser goldfinch
<i>Streptopelia decaocto</i>	Eurasian collared dove
<i>Sylvilagus bachmani</i>	Brush rabbit

Re: Completed Tree Inventory Report, Vineyard Avenue, Pleasanton, California

Robin,

Attached you will find our completed *Tree Inventory Report* for the above noted site in Pleasanton. A total of 10 trees were evaluated and this includes all trees that were 6 inches or larger in trunk diameter and located on or near the property.

All trees in this report were evaluated and documented for species, size, health, and structural condition. The *Tree Inventory Chart* also includes information about expected impacts of the proposed development plan and recommendations for action based on the plan reviewed. A *Key to Tree inventory Chart* is included, along with *Tree Fencing Detail* and *Tree Preservation Guidelines*. A *Tree Location Plan* shows the location and numbering sequence of all evaluated trees.

This report is intended to be a basic inventory of trees present at this site, which includes a general review of tree health and structural condition. No in-depth evaluation has occurred on any tree, and assessment has included only external visual examination without probing, drilling, coring, root collar examination, root excavation, or dissecting any tree part. Failures, deficiencies, and problems may occur in these trees in the future, and this inventory in no way guarantees or provides a warranty for their health or structural condition. No other trees beyond those listed have been included in this report. If other trees need to be included it is the responsibility of the client to provide that direction.

#### EXISTING SITE CONDITION SUMMARY

The project site consists of a large infill parcel of empty land surrounded by subdivision development.

#### EXISTING TREE SUMMARY

Three of the trees are Olives that are part of entry landscaping. These trees are being maintained and are in good condition. These can easily be preserved.

The balance of trees are Black Walnuts that appear to be remnants of past farming activities. The structural integrity of these trees is generally marginal due to their age and remnant status. They are located well outside the area that is being proposed for development and there are no targets in their general vicinity. They could easily be pruned and generally cleaned up if retention was desired, or their removal could be justified due to their age and condition.

#### CONSTRUCTION IMPACT SUMMARY

Six of the ten trees included in this report are located near the property line but on adjacent properties. Based on the conceptual plan that we evaluated the following summary of impacts is provided:

- (4) Trees can be preserved on site
- (6) Trees are located off the site and also appear to be preservable

Please feel free to contact me if you have questions regarding this report, or if further discussion would be helpful.

Regards,

John C. Meserve  
ISA Certified Arborist, WE #0478A

KEY TO TREE  
INVENTORY CHART

## KEY TO TREE INVENTORY CHART

### Tree Number

Each tree has been identified in the field with an aluminum tag and reference number. Tags are attached to the trunk at approximately eye level. The *Tree Location Plan* illustrates the location of each numbered tree.

### Species

Each tree has been identified by genus, species and common name. Many species have more than one common name.

### Trunk

Each trunk has been measured in inches to document its diameter at 54" above adjacent grade. Trunk diameter is a good indicator of age, and is commonly used to determine mitigation replacement requirements.

### Height

Height is estimated in feet, using visual assessment.

### Radius

Radius is estimated in feet, using visual assessment. Since many canopies are asymmetrical, it is not uncommon for a radius estimate to be an average of the canopy size.

### Health

The following descriptions are used to rate the health of a tree. Trees with a rating of 4 or 5 are very good candidates for preservation and will tolerate more construction impacts than trees in poorer condition. Trees with a rating of 3 may or may not be good candidates for preservation, depending on the species and expected construction impacts. Trees with a rating of 1 or 2 are generally poor candidates for preservation.

- (5) Excellent - health and vigor are exceptional, no pest, disease, or distress symptoms.
- (4) Good - health and vigor are average, no significant or specific distress symptoms, no significant pest or disease.
- (3) Fair - health and vigor are somewhat compromised, distress is visible, pest or disease may be present and affecting health, problems are generally correctable.
- (2) Marginal - health and vigor are significantly compromised, distress is highly visible and present to the degree that survivability is in question.
- (1) Poor - decline has progressed beyond the point of being able to return to a healthy condition again. Long-term survival is not expected. This designation includes dead trees.

## **Structure**

The following descriptions are used to rate the structural integrity of a tree. Trees with a rating of 3 or 4 are generally stable, sound trees which do not require significant pruning, although cleaning, thinning, or raising the canopy might be desirable. Trees with a rating of 2 are generally poor candidates for preservation unless they are preserved well away from improvements or active use areas. Significant time and effort would be required to reconstruct the canopy and improve structural integrity. Trees with a rating of 1 are hazardous and should be removed.

- (4) Good structure - minor structural problems may be present which do not require corrective action.
- (3) Moderate structure - normal, typical structural issues which can be corrected with pruning.
- (2) Marginal structure - serious structural problems are present which may or may not be correctable with pruning, cabling, bracing, etc.
- (1) Poor structure - hazardous structural condition which cannot be effectively corrected with pruning or other measures, may require removal depending on location and the presence of targets.

## **Construction Impacts**

Considering the proximity of construction activities, type of activities, tree species, and tree condition - the following ratings are used to estimate the amount of impact on tree health and stability. Most trees will tolerate a (1) rating, many trees could tolerate a (2) rating with careful consideration and mitigation, but trees with a (3) rating are poor candidates for preservation.

- (3) A significant impact on long term tree integrity can be expected as a result of proposed development.
- (2) A moderate impact on long term tree integrity can be expected as a result of proposed development.
- (1) A minor impact on long term tree integrity can be expected as a result of proposed development.
- (0) No impacts are expected

## **Recommendations**

Recommendations are provided for removal or preservation. For those being preserved, protection measures and mitigation procedures to offset impacts and improve tree health are provided.

- (0) No action required
- (1) Preservation appears to be possible.
- (2) Removal is required due to significant development impacts.
- (3) Removal is required due to poor health or hazardous structure.

- (5) Removal is recommended due to poor species characteristics.
- (6) Install temporary protective fencing at the edge of the dripline, or edge of approved construction, prior to beginning grading or construction. Maintain fencing in place for duration of all construction activity in the area.
- (7) Maintain existing grade within the fenced portion of the dripline. Route drainage swales and all underground work outside the dripline.
- (8) Place a 4" layer of chipped bark mulch over the soil surface within the fenced dripline prior to installing temporary fencing. Maintain this layer of mulch throughout construction.
- (9) Prune to clean, raise, or clear the canopy, per International Society of Arboriculture pruning standards.
- (10) This tree is located off the project site, but near the property line.
- (11) Excavation may be required within the TPZ and the dripline for development. Excavation within the TPZ of any type must adhere to the following guidelines:

All roots encountered that are 2 inches or larger in diameter must be cleanly cut as they are encountered by excavating equipment.

Roots may not be ripped from the ground and then trimmed. They must be trimmed as encountered and this will require the use of a ground man working with a suitable power tool.

Pruned and exposed roots greater than 2 inches in diameter must be protected from desiccation if left exposed for more than 24 hours. Cover cut roots with heavy cloth, burlap, used carpeting, or similar material that has been soaked in water, until trench or excavation has been backfilled.

If excavation impacts more than 20% of the defined TPZ then supplemental irrigation may be required to offset loss of roots. Excavation in this case should be directed by the project arborist who will determine whether mitigation is required, when, and how.

Any excavation within the defined TPZ will require that the tree be monitored on a monthly basis by the project arborist for the duration of construction and for one year beyond completion of construction. Monitoring may determine other mitigation measures that may be required to offset root loss or damage.

- (13) This species is exempt from mitigation, per the tree ordinance
- (14) To effectively preserve this tree the foundation for the adjacent block wall must be a grade beam design inside the canopy dripline with less than 6" of excavation for the beam and maximum separation for the piers.
- (15) All underground utilities and drains must be installed outside the canopy dripline of this tree.

TREE FENCING DETAIL

NOTE

Metal Wire Tree Protection Fencing

Minimum 4-ft high steel welded wire fencing with mesh size 2-in x 4-in, or arborist approved wire fence substitute. Cut and shape as needed for sloping terrain

Metal tie wire, flip tie, or equivalent, 5 per post

Standard farm quality metal 'T' post, 5.5' tall, placed 8' on center

METAL WIRE TREE PROTECTION FENCING

# TREE PRESERVATION GUIDELINES

TREE PRESERVATION GUIDELINES  
Summer Oaks Family Housing  
Sonoma, CA

INTRODUCTION

Great care must be exercised when development is proposed in the vicinity of established trees of any type. The trees present at this site require specialized protection techniques during all construction activities to minimize negative impact on their long term health and vigor. The area immediately beneath and around canopy driplines is especially critical, and the specifications that follow are established to protect short and long term tree integrity. The purpose of this specification is therefore to define the procedures that must be followed during any and all phases of development in the immediate vicinity of designated protected trees.

Established, mature trees respond in a number of different ways to the disruption of their natural conditions. Change of grade within the root system area or near the root collar, damage to the bark of the trunk, soil compaction above the root system, root system reduction or damage, or alteration of summer soil moisture levels may individually or collectively cause physiological stress leading to tree decline and death. The individual impacts of these activities may cause trees to immediately exhibit symptoms and begin to decline, but more commonly the decline process takes many years, with symptoms appearing slowly and over a period of time. Trees may not begin to show obvious signs of decline from the negative impacts of construction until many years after construction is completed. It is not appropriate to wait for symptoms to appear, as this may be too late to correct the conditions at fault and to halt decline.

It is therefore critical to the long-term health of all protected trees that a defined protection program be established before beginning any construction activity where protected trees are found. Once incorporated at the design level, it is mandatory that developers, contractors, and construction personnel understand the critical importance of these guidelines, and the potential penalties that will be levied if they are not fully incorporated at every stage of development.

The following specifications are meant to be utilized by project managers and those supervising any construction in the vicinity of protected trees including grading contractors, underground contractors, all equipment operators, construction personnel, and landscape contractors. Questions which arise, or interpretation of specifications as they apply to specific site activities, must be referred to the project arborist as they occur.

## TREE PROTECTION ZONE

1. The canopy dripline is illustrated on the Improvement Plans and represents the area around each tree, or group of trees, which must be protected at all times with tree protection fencing.
2. No encroachment into the dripline is allowed at any time without approval from the project arborist, and unauthorized entry may be subject to civil action and penalties.
3. The dripline will be designated by the project arborist at a location determined to be adequate to ensure long term tree viability and health. This is to occur prior to installation of fencing and in conjunction with the fencing contractor

## TREE PROTECTION FENCING

1. Prior to initiating any construction activity on a construction project, including demolition or grading, temporary protective fencing shall be installed at each site tree, or group of trees. Fencing shall be located at the dripline designated by the project arborist and generally illustrated on the Improvement Plans.
2. Fencing shall be minimum 4' height at all locations, and shall form a continuous barrier without entry points around all individual trees, or groups of trees. Barrier type fencing is recommended, but any fencing system that adequately prevents entry will be considered for approval by the project arborist. The use of post and cable fencing is not acceptable, however.
3. Fencing shall be installed tightly between steel fence posts (standard quality farm 'T' posts work well) placed no more than 8 feet on center. Fencing shall be attached to each post at 5 locations with plastic electrical ties, metal tie wire, or flip ties. See attached fencing detail.
4. Fencing shall serve as a barrier to prevent encroachment of any type by construction activities, equipment, materials storage, or personnel.
5. All encroachment into the fenced dripline must be approved and supervised by the project arborist. Approved dripline encroachment may require additional mitigation or protection measures that will be determined by the project arborist at the time of the request.

6. Contractors and subcontractors shall direct all equipment and personnel to remain outside the fenced area at all times until project is complete, and shall instruct personnel and sub-contractors as to the purpose and importance of fencing and preservation.
7. Fencing shall be upright and functional at all times from start to completion of project. Fencing shall remain in place and not be moved or removed until all construction activities at the site are completed.

#### TREE PRUNING AND TREATMENTS

1. All recommendations for pruning or other treatments must be completed prior to acceptance of the project. It is strongly recommended that pruning be completed prior to the start of grading to facilitate optimum logistics and access.
2. All pruning shall be conducted in conformance with International Society of Arboriculture pruning standards, and all pruning must occur by, or under the direct supervision of, an arborist certified by the International Society of Arboriculture.

#### GRADING AND TRENCHING

1. Any construction activity that necessitates soil excavation in the vicinity of preserved trees shall be avoided where possible, or be appropriately mitigated under the guidance of the project arborist. All contractors must be aware at all times that specific protection measures are defined, and non conformance may generate stop-work orders.
2. The designated dripline is defined around all site trees to be preserved. Fences protect the designated areas. No grading or trenching is to occur within this defined area unless so designated by the Improvement Plan, and where designated shall occur under the direct supervision of the project arborist.
3. Trenching should be routed around the dripline. Where trenching has been designated within the dripline, utilization of underground technology to bore, tunnel or excavate with high-pressure air or water will be specified. Hand digging will be generally discouraged unless site conditions restrict the use of alternate technology.

4. All roots greater than one inch in diameter shall be cleanly hand-cut as they are encountered in any trench or during any grading activity. The tearing of roots by equipment shall not be allowed. Mitigation treatment of pruned roots shall be specified by the project arborist as determined by the degree of root pruning, location of root pruning, and potential exposure to desiccation. No pruning paints or sealants shall be used on cut roots.
5. Where significant roots are encountered mitigation measures such as supplemental irrigation and/or organic mulches may be specified by the project arborist to offset the reduction of root system capacity.
6. Retaining walls are effective at holding grade changes outside the area of the dripline and are recommended where necessary. Retaining walls shall be constructed in post and beam or drilled pier construction styles where they are necessary near or within a dripline.
7. Grade changes outside the dripline, or those necessary in conjunction with retaining walls, shall be designed so that drainage water of any type or source is not diverted toward or around the root crown in any manner. Grade shall drain away from root crown at a minimum of 2%. If grading toward the root collar is unavoidable, appropriate surface and/or subsurface drain facilities shall be installed so that water is effectively diverted away from root collar area.
8. Grade reduction within the designated dripline shall be generally discouraged, and where approved, shall be conducted only after careful consideration and coordination with the project arborist.
9. Foundations of all types within the dripline shall be constructed using design techniques that eliminate the need for trenching into natural grade. These techniques might include drilled piers, grade beams, bridges, or cantilevered structures. Building footprints should generally be outside the dripline whenever possible.

## DRAINAGE

The location and density of native trees may be directly associated with the presence of naturally occurring water, especially ephemeral waterways. Project design, especially drainage components, should take into consideration that these trees may begin a slow decline if this naturally present association with water is changed or eliminated.

## TREE DAMAGE

1. Any form of tree damage which occurs during the demolition, grading, or construction process shall be evaluated by the project arborist. Specific mitigation measures will be developed to compensate for or correct the damage. Fines and penalties may also be levied.

2. Measures may include, but are not limited to, the following:

- pruning to remove damaged limbs or wood
- bark scoring to remove damaged bark and promote callous formation
- alleviation of compaction by lightly scarifying the soil surface
- installation of a specific mulching material
- supplemental irrigation during the growing season for up to 5 years
- treatment with specific amendments intended to promote health, vigor, or root growth
- vertical mulching or soil fracturing to promote root growth
- periodic post-construction monitoring at the developer's expense
- tree replacement, or payment of the established appraised value, if the damage is so severe that long term survival is not expected.

3. Any tree that is significantly damaged and whose survivability is threatened, due to negligence by any contractor, shall be appraised using the Trunk Formula Method provided in the 9th Edition of the Guide For Plant Appraisal. This appraisal value will be the basis for any fines levied on the offending contractor.

## MULCHING

1. Trees will benefit from the application of a 4 inch layer of chipped bark mulch over the soil surface within the Tree Protection Zone. Ideal mulch material is a chipped bark containing a wide range of particle sizes. Bark mulches composed of shredded redwood, bark screened for uniformity of size, dyed bark, or chipped lumber will not function as beneficially. All trees that are expected to be

impacted in any way by project activities shall have mulch placed prior to the installation of protection fencing.

2. Mulch should be generated from existing site trees that are removed or pruned as part of the project. Much brought onto the site from an outside source must be from trees that are verified to be free of the Sudden Oak Death pathogen *Phytophthora ramorum*.

# ISA TREE PRUNING STANDARDS

## **PRUNING STANDARDS**

### **Purpose:**

Trees and other woody plants respond in specific and predictable ways to pruning and other maintenance practices. Careful study of these responses has led to pruning practices which best preserve and enhance the beauty, structural integrity, and functional value of trees.

In an effort to promote practices which encourage the preservation of tree structure and health, the W.C. ISA Certification Committee has established the following Standards of Pruning for Certified Arborists. The Standards are presented as working guidelines, recognizing that trees are individually unique in form and structure, and that their pruning needs may not always fit strict rules. The Certified Arborist must take responsibility for special pruning practices that vary greatly from these Standards.

### **I. Pruning Techniques**

- A. A thinning cut removes a branch at its point of attachment or shortens it to a lateral large enough to assume the terminal role. Thinning opens up a tree, reduces weight on heavy limbs, can reduce a tree's height, distributes ensuing invigoration throughout a tree and helps retain the tree's natural shape. Thinning cuts are therefore preferred in tree pruning.

When shortening a branch or leader, the lateral to which it is cut should be at least one-half the diameter of the cut being made. Removal of a branch or leader back to a sufficiently large lateral is often called "drop crotching."

- B. A heading cut removes a branch to a stub, a bud or a lateral branch not large enough to assume the terminal role. Heading cuts should seldom be used because vigorous, weakly attached upright sprouts are forced just below such cuts, and the tree's natural form is altered. In some situations, branch stubs die or produce only weak sprouts.

- C. When removing a live branch, pruning cuts should be made in branch tissue just outside the branch bark ridge and collar, which are trunk tissue. *(Figure 1)* If no collar is visible, the angle of the cut should approximate the angle formed by the branch bark ridge and the trunk. *(Figure 2)*
- D. When removing a dead branch, the final cut should be made outside the collar of live callus tissue. If the collar has grown out along the branch stub, only the dead stub should be removed, the live collar should remain intact, and uninjured. *(Figure 3)*
- E. When reducing the length of a branch or the height of a leader, the final cut should be made just beyond (without violating) the branch bark ridge of the branch being cut to. The cut should approximately bisect the angle formed by the branch bark ridge and an imaginary line perpendicular to the trunk or branch cut. *(Figure 4)*
- F. A goal of structural pruning is to maintain the size of lateral branches to less than three-fourths the diameter of the parent branch or trunk. If the branch is codominant or close to the size of the parent branch, thin the branch's foliage by 15% to 25%, particularly near the terminal. Thin the parent branch less, if at all. This will allow the parent branch to grow at a faster rate, will reduce the weight of the lateral branch, slow its total growth, and develop a stronger branch attachment. If this does not appear appropriate, the branch should be completely removed or shortened to a large lateral. *(Figure 5)*
- G. On large-growing trees, except whorl-branching conifers, branches that are more than one-third the diameter of the trunk should be spaced along the trunk at least 18 inches apart, on center. If this is not possible because of the present size of the tree, such branches should have their foliage thinned 15% to 25%, particularly near their terminals. *(Figure 6)*
- H. Pruning cuts should be clean and smooth with the bark at the edge of the cut firmly attached to the wood.
- I. Large or heavy branches that cannot be thrown clear, should be lowered on ropes to prevent injury to the tree or other property.
- J. Wound dressings and tree paints have not been shown to be effective in preventing or reducing decay. They are therefore not recommended for routine use when pruning.

FIGURE 1. When removing a branch, the final cut should be just outside the branch bark ridge and collar.

FIGURE 2. In removing a limb without a branch collar, the angle of the final cut to the branch bark ridge should approximate the angle the branch bark ridge forms with the limb. Angle AB should equal Angle BC.

FIGURE 3. When removing a dead branch, cut outside the callus tissue that has begun to form around the branch.

FIGURE 4. In removing the end of a limb to a large lateral branch, the final cut is made along a line that bisects the angle between the branch bark ridge and a line perpendicular to the limb being removed. Angle AB is equal to Angle BC.

FIGURE 5. A tree with limbs tending to be equal-sized, or codominant. Limbs marked B are greater than  $\frac{3}{4}$  the size of the parent limb A. Thin the foliage of branch B more than branch A to slow its growth and develop a stronger branch attachment.

FIGURE 6. Major branches should be well spaced both along and around the stem.

## II. Types of Pruning — Mature Trees

### A. CROWN CLEANING

Crown cleaning or cleaning out is the removal of dead, dying, diseased, crowded, weakly attached, and low-vigor branches and watersprouts from a tree crown.

### B. CROWN THINNING

Crown thinning includes crown cleaning and the selective removal of branches to increase light penetration and air movement into the crown. Increased light and air stimulates and maintains interior foliage, which in turn improves branch taper and strength. Thinning reduces the wind-sail effect of the crown and the weight of heavy limbs. Thinning the crown can emphasize the structural beauty of trunk and branches as well as improve the growth of plants beneath the tree by increasing light penetration. When thinning the crown of mature trees, seldom should more than one-third of the live foliage be removed.

At least one-half of the foliage should be on branches that arise in the lower two-thirds of the trees. Likewise, when thinning laterals from a limb, an effort should be made to retain inner lateral branches and leave the same distribution of foliage along the branch. Trees and branches so pruned will have stress more evenly distributed throughout the tree or along a branch.

An effect known as "lion's-tailing" results from pruning out the inside lateral branches. Lion's-tailing, by removing all the inner foliage, displaces the weight to the ends of the branches and may result in sunburned branches, watersprouts, weakened branch structure and limb breakage.

### C. CROWN REDUCTION

Crown reduction is used to reduce the height and/or spread of a tree. Thinning cuts are most effective in maintaining the structural integrity and natural form of a tree and in delaying the time when it will need to be pruned again. The lateral to which a branch or trunk is cut should be at least one-half the diameter of the cut being made.

### D. CROWN RESTORATION

Crown restoration can improve the structure and appearance of trees that have been topped or severely pruned using heading cuts. One to three sprouts on main branch stubs should be selected to reform a more natural appearing crown. Selected vigorous sprouts may need to be thinned to a lateral, or even headed, to control length growth in order to ensure adequate attachment for the size of the sprout. Restoration may require several prunings over a number of years.

## **II. Types of Pruning — Mature Trees (*continued*)**

### **E. CROWN RAISING**

Crown raising removes the lower branches of a tree in order to provide clearance for buildings, vehicles, pedestrians, and vistas. It is important that a tree have at least one-half of its foliage on branches that originate in the lower two-thirds of its crown to ensure a well-formed, tapered structure and to uniformly distribute stress within a tree.

When pruning for view, it is preferable to develop “windows” through the foliage of the tree, rather than to severely raise or reduce the crown.

## **III. Size of Pruning Cuts**

Each of the Pruning Techniques (Section I) and Types of Pruning (Section II) can be done to different levels of detail or refinement. The removal of many small branches rather than a few large branches will require more time, but will produce a less-pruned appearance, will force fewer watersprouts and will help to maintain the vitality and structure of the tree. Designating the maximum size (base diameter) that any occasional undesirable branch may be left within the tree crown, such as ½", 1" or 2" branch diameter, will establish the degree of pruning desired.

## **IV. Climbing Techniques**

- A. Climbing and pruning practices should not injure the tree except for the pruning cuts.
- B. Climbing spurs or gaffs should not be used when pruning a tree, unless the branches are more than throw-line distance apart. In such cases, the spurs should be removed once the climber is tied in.
- C. Spurs may be used to reach an injured climber and when removing a tree.
- D. Rope injury to thin barked trees from loading out heavy limbs should be avoided by installing a block in the tree to carry the load. This technique may also be used to reduce injury to a crotch from the climber's line.

**Appendix D:  
Tree Inventory Report Addendum**

Re: Response to Planner questions; Addendum to Tree Inventory Report dated September 13, 2024, Vineyard Avenue between Thiessen Street and Manor Lane, Pleasanton, California

Robin,

After reading the City of Pleasanton's CEQA consultant's comments regarding our Arborist Report for the above referenced project site I am providing the following responses as an addendum to our original report:

*Please clearly identify which tree numbers are located on-site and which tree numbers are off-site.*

Tree # 4, #5, #7, and #9 are located on-site

Tree #1, #2, and #3 are located off-site and not in an area of planned work

Tree #6, #8, and #10 are located off-site and in an area of planned work

*The Arborist Report says all 10 trees can be avoided. Is this true for both site plans?*

Yes, all 10 trees can be preserved in either of the site plans provided for our review.

*Notwithstanding that all trees may be avoided, are there any of the trees protected pursuant to the City's Tree Ordinance*

Protected trees are Heritage trees in Pleasanton and include any species with a trunk diameter of 55" in circumference (17.5 inches in diameter), or the largest 2 trunks 55" or larger, or greater than 35 feet in height.

Based on this definition there are 4 trees that are Heritage trees including #6, #7, #8, and #9. No trees are greater than 35 feet in height. None of these trees requires removal.

*Additionally, the City's Landscape Architect would like the Arborist Report to be updated with a valuation of the trees.*

Worksheets for each of the trees in our Tree Inventory document appraised Reproduction Method values using the Trunk Formula Technique based on the 10<sup>th</sup>

Edition of the Guide for Plant Appraisal and are attached. This summary of values is provided:

On-Site Trees

Tree #4- \$5,300

Tree #5- 2,500

Tree #7- 14,800

Tree #9- \$14,700

Off-Site Trees in Area of Planned Work

Tree #6- \$17,500

Tree #8- \$24,900

Tree #10- \$3,400

Off-Site Trees Not in Area of Planned Work

Tree #1- \$2,100

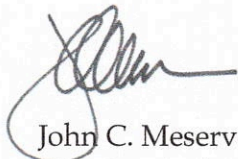

Tree #2- \$1,600

Tree #3- \$700

The total appraised value for all trees is \$87,500.

Please feel free to contact me if additional discussion is required.

Regards,

John C. Meserve

Vineyard Avenue  
Pleasanton, California

Dear Ms. Antonescu

We are pleased to present this Due Diligence Level Geotechnical Investigation Report for the proposed Residential Development at Vineyard Avenue (APN# 946-4619-001) in Pleasanton, California. This document describes the subsurface conditions encountered during our subsurface exploration and provides preliminary recommendations for the proposed development.

If you have any questions or comments regarding this report, please feel free to call our office at (925) 400-7449.

Sincerely,

**Aftershock Geotechnical**

## 1 Introduction

### 1.1 Location

The project site is bound by Vineyard Avenue, Old Vineyard Avenue, Thiessen Street and Manoir Lane in Pleasanton, California. The site location is shown on the Vicinity Map (Plate 1).

### 1.2 Project Description

We were provided the Preliminary Grading Plan dated April 5, 2024 by CBG.

The proposed project consists of constructing 27 single family detached residences on the portion of the site south of Vineyard Heights Lane. The proposed residences are anticipated to be supported on Post-Tensioned Concrete Slab on Grade foundations. On the northern portion of the site approximately 1 ½ acres will be dedicated to open space and approximately 1 ½ acres of park.

Preliminary grading has the lots being terrace with pad grade separations created using approximately 3-foot-tall retaining walls. The majority of the lots being cut/fill transition lots with cuts and fills up to about 4 feet. Lots 25 through 27 are located in fill with fills up to about 9 ½ feet.

### 1.3 Purpose & Scope of Services

The purpose of this investigation is to explore subsurface soil and groundwater conditions and to provide preliminary conclusions, recommendations for further investigation and preliminary geotechnical recommendations.

Our scope of services consisted of the following:

- Reviewing geotechnical and geologic documents in our files pertaining to the site and the immediate vicinity;
- Reviewing aerial photographs in our files pertaining to the site and the immediate vicinity;
- Marking the site for USANorth to locate underground utilities;
- Drilling 10 borings up to a depth of 8 feet using a combination of powered augers and hand augers;
- Laboratory testing;
- Engineering analysis;
- Preparation of this report;

## 2 Subsurface Exploration & Laboratory Testing

### 2.1 Subsurface Exploration & Laboratory Testing

Our subsurface exploration was performed on March 30, 2024 and consisted of drilling ten borings. The borings were drilled up to a depth of 8 feet. The borings were drilled using a combination of gas powered augers and hand augers. Bulk samples were collected of the materials encountered in the borings. Upon completion of drilling and sampling, the boreholes were backfilled with onsite soils. The locations of the borings are shown on the attached Site Plan (Plate 2).

Materials encountered in the borings were logged in accordance with the United Soil Classification System (USCS) and Boring Logs were created. The Boring Logs are presented in the Appendix A.

## 2.2 Laboratory Testing

Samples from our subsurface exploration were transported to our laboratory for testing. Laboratory testing consisted of performing Atterberg Limits Testing & Sieve/Hydrometer Analysis on three samples. Atterberg Limits Testing resulted in Liquid Limits (LL) between 18 and 20 and Plasticity Indices between 3 and 6. The Sieve/Hydrometer Analysis showed the materials had between 55 and 73 percent passing the #200 sieve (fine grain soils).

The results of our laboratory testing are presented in Appendix B.

## 3 Site & Subsurface Conditions

### 3.1 Regional Geology

The site is located within the Coastal Ranges Geomorphic Province. The Coastal Ranges Geomorphic Province generally extends from the coast to the Central Valley. This province was formed as an interaction between the North American and Pacific Tectonic Plates. It consists of north-west trending mountain ranges and valleys. These mountain ranges and valleys are subparallel to the San Andreas Fault.

The Coastal Ranges are composed of thick Mesozoic and Cenozoic sedimentary strata. The northern and southern ranges are separated by a depression containing the San Francisco Bay. The northern Coastal Ranges are dominated by irregular, knobby, landslide-topography of the Franciscan Complex. The eastern border is characterized by strike-ridges and valleys in Upper Mesozoic strata. In several areas, Franciscan rocks are overlain by volcanic cones and flows of the Quien Sabe, Sonoma and Clear Lake volcanic fields.

The Dibblee JR. (2006) Geologic Map for the Livermore Quadrangle locates the portion of the site north of Vineyard Heights Lane as being within the Surficial Sediments (Qg) geologic unit. Qg is characterized as sand and gravel of major stream channels.

The southern portion of the site is located within the Surficial Sediments (Qa) geologic unit. Qa is characterized as Alluvial gravel, sand, and clay of valley areas.

### 3.2 Site Background

Historic aerial photographs of the site between 1949 and 1979 show the site as being an orchard. After 1979 the site appears to be open field. Between 1993 and 2002 Vineyard Avenue was constructed. By 2005 Thiessen Street and Manoir Lane had been improved. Additionally, it appears that minor grading has occurred on the northern portion of the site adjacent to Vineyard Avenue and on the western portion of the site near the intersection of Vineyard Heights Lane. It appears that additional minor grading occurred across the site in 2012. We have included some of the more pertinent aerial photographs in Appendix D.

### 3.3 Surface Conditions

The site has a gradual slope with the peak elevation of 428 feet occurring near the intersection of Manoir Lane and Old Vineyard Avenue. The low point occurs near the intersection of Thiessen Street and Vineyard Avenue with an elevation of 392 feet. Grades from the east and west fall towards the center of the site creating a valley. There appears to be some fill along the northern boundary (likely a result of grading Vineyard Avenue).

We identified a drain pipe with a rock apron discharging on to the southern portion of the site.

### 3.4 Subsurface Conditions

Materials encountered in the borings predominantly dark brown, moist, stiff sandy clay with trace subangular gravel to an approximate depth of 4 to 5 feet. Below 4 to 5 feet in depth the material generally remained sandy clay but the material became very stiff and dark to medium brown in color. For detailed descriptions of the materials encountered in our boring please refer to the Boring Logs presented in Appendix A.

### 3.5 Groundwater Conditions

Ground water was not encountered in our borings (to depths of 8 feet). Based on our experience with the neighboring site, we estimate groundwater could be between 25 and 30 feet deep.

## 4 Geologic Hazards

### 4.1 Existing Landslides

There are not existing landslides mapped at the site.

### 4.2 Earthquake Induced Landsliding

Strong ground shaking during a major earthquake on a nearby fault is likely to be felt at this site. The stability of all slopes is lower during seismic events. The site is not mapped in a State of California Zone of Earthquake Induced Landsliding. Based on the relatively flat nature of the site and not being mapped in a Zone of Earthquake Induced Landsliding, it is our opinion from that the potential for earthquake induced landsliding is low.

### 4.3 Surface Fault Rupture

The site is located in the seismically active greater San Francisco Bay Area. The seismicity of the area is dominated by the San Andreas, Hayward and Calaveras faults. The surface fault rupture hazards posed by active and potentially active faults are evaluated by the California Geological Survey (CGS) in accordance with the requirements of the Alquist-Priolo Earthquake Fault Zoning Act. We reviewed the CGS Earthquake Zones of Required Investigation Map. Based on our review, the site is not located within or immediately adjacent to a State of California Alquist-Priolo Earthquake Fault Zone.

### 4.4 Liquefaction and Associated Effects

Liquefaction is the temporary transformation of saturated soils into a viscous liquid during strong to violent ground shaking during a seismic event. This transformation occurs as a result of loss of strength due to rapid

increases in pore water pressure within the soil matrix. Clay soils are generally a less susceptible liquefaction, but are more likely to undergo cyclic softening, and loss in strength. The impact of liquefaction and cyclic softening to surface structures is generally limited to soils within 50 feet of the ground surface. Primary factors affecting the potential for a soil to undergo liquefaction or cyclic softening include groundwater depth, overburden pressure, soil type and intensity of the seismic event.

Lots 25 through 27 are mapped in a Liquefaction Zone of Required investigation. Based on our experience with the neighboring parcel liquefaction induced settlement potential is likely low. We recommend that a confirmation boring be performed as part of the Design Level Geotechnical Investigation.

#### 4.5 Tsunami/Seiche

A tsunami is a series of waves or surges that can cause great loss of life and property damage in coastal areas. Very large tsunamis can cause damage to coastal regions thousands of miles away from the earthquake that caused them. Tsunamis are triggered by earthquakes, volcanic eruptions, submarine landslides, and by onshore landslides in which large volumes of debris fall into the water. The site is mapped out side of a Tsumani hazard area.

#### 4.6 Flooding

Using the Federal Emergency Management Agency (FEMA) online flood map tool, the site is located in an X (unshaded) Zone. This zone is characterized as an area of minimal flood hazard, usually depicted on FIRMs as above the 500-year flood level.

### 5 Geotechnical Discussions & Evaluations

#### 5.1 Presence of Undocumented Fill

There appears to be undocumented fill along the northern property line. We believe that the fill was placed as part of grading Vineyard Avenue. Based on the Preliminary Grading Plan we do not anticipate a significant impact to the project. There also appears to have been minor grading across the site. Our borings did not identify any undocumented fill.

### 6 Preliminary Geotechnical Recommendations

#### 6.1 2022 California Building Code Seismic Design Parameters

The following Seismic Design Parameters were determined using the OSHPD Seismic Design Maps online program using ASCE 7-16 as the Reference Code:

Criteria	Value
Latitude	37.6600
Longitude	-121.8295
Site Class	D (Default)
S <sub>s</sub>	1.563
S <sub>1</sub>	0.6
PGA	0.652

According to ASCE 7-16 Section 11.4.3 a Site Specific Response Analysis is required unless one of the specified exceptions is used by the structural engineer. If an exception is used, the following criteria may be used:

Criteria	Value
F <sub>a</sub>	1.2
F <sub>v</sub>	1.7
S <sub>MS</sub>	1.876
S <sub>M1</sub>	1.02
S <sub>DS</sub>	1.251
S <sub>D1</sub>	0.68

## 6.2 Preliminary Foundation Recommendations

### 6.2.1 Post-Tensioned Slab-On-Ground

It is our opinion that the proposed building can be supported on a post-tensioned (PT) slab-on-ground foundation. In accordance with the PTI DC10.5 (as specified by the CBC Section 1808.6.2) we recommend the following design criteria

Post-Tensioned Concrete Slab-On-Ground Foundation Design Parameters	
Allowable Bearing Capacity (may be increased by 33% for seismic and wind loads)	2,000 psf
Passive Equivalent Fluid Pressure (neglect the upper foot if ground surface is not confined)	250 pcf
Friction Coefficient – Sliding	0.35
Minimum Friction Coefficient – Prestress Loss (higher value may be warranted as determined by the Structural Engineer)	0.75
Edge Moisture Variation Distance	
Center	9.0 Feet
Edge	4.9 Feet
Differential Swell	
Center	0.88 Inches
Edge	1.32 Inches
Minimum Stiffness Coefficient, C <sub>Δ</sub>	
Center	240
Edge	480

Where porches are tied into the building, the building's PT slab foundation should be designed such that it includes the porch.

PT slab foundations can be constructed on properly prepared subgrade soils. The upper foot of the subgrade soils should be pre-soaked to at least 5 percent above optimum moisture content prior to concrete placement. The pre-soaked pads should not be allowed to dry out to less than the recommended moisture content before concrete is placed. Subgrade moisture should be observed by a member of our staff prior to concrete placement. Compacted subgrade soils may become disturbed during utility trench excavation and backfilling.

These soils should be uniformly moisture conditioned to at least 5 percent above optimum moisture content and compacted prior to concrete placement.

### 6.2.2 Vapor Retarders

We recommend that a polyethylene vapor retarder be installed when flooring materials sensitive to moisture are used. The vapor retarder should be placed between the slab-on-ground and the subgrade or capillary break. Vapor retarders should have a minimum thickness of 10 mil. Joints should be lapped a minimum of 6 inches and sealed at the joints and all slab openings.

### 6.2.3 Capillary Breaks

If the structural engineer elects to include a capillary break, the capillary break should be in accordance with California Green Building Code 4.505.2.1

## 6.3 Retaining Walls

Masonry retaining walls can be supported on footing foundations founded on engineered fill or firm native soil. We recommend the following geotechnical criteria be incorporated into retaining wall design:

### 6.3.1 Lateral Earth Pressures

The following table presents lateral earth pressures to be used in the retaining wall design:

Criteria	Value
Active Lateral Earth Pressure (drained conditions) <i>level backfill</i>	50 pcf
Active Lateral Earth Pressure (drained conditions) <i>2H:1V backfill</i>	65 pcf

The above-recommended lateral pressures do not include surcharges. Therefore, the designer should include appropriate surcharge loads (including those for construction loads) in retaining wall designs.

The above criteria are applicable to walls up to 6 feet high. For taller walls, we should be requested to provide the seismic earth pressure for the walls.

### 6.3.2 Retaining Wall Back-Drains

The recommended lateral pressures assume drained condition. To prevent hydrostatic pressure build-up, retaining walls should be provided with permanent backdrains. The backdrain should consist of a blanket of Class 2 permeable material (conforming to Section 68-2.02F of the Caltrans Standard Specifications) and a 4-inch diameter perforated PVC pipe (SDR 35). The perforated pipe should be placed, perforations facing down, near the bottom of the wall to carry collected water to a suitable gravity discharge. The permeable material blanket should be at least 12 inches thick and should be placed from the base of the retaining wall to about 1 foot below finished grade at the top of the wall. A cap of compacted native soil should be placed over the permeable material to reach finished grade.

An acceptable alternative method of back drainage would be to use American Sitedrain (Model 186) and Sitedrain HQ (Model 246) or approved equivalent, installed in strict accordance with the manufacturer’s recommendations. The product should be installed in accordance with the manufacture’s details. If such a system is used, care should be taken so that the drain does not collapse during backfilling.

### 6.3.3 Shallow Foundations – Retaining Walls

The following criteria may be used when designing footings for retaining walls:

Design Criteria	Value
Allowable Bearing Capacity (May be temporarily increased by 1/3 for wind and seismic loading)	2,000 psf
Allowable Passive Equivalent Fluid Pressure	250 psf
Friction Factor – Concrete to Soil	0.35
Minimum Footing Depth	24 inches

Should passive pressure and friction be used in combination, the resistance provided by friction should be reduced by 50%.

### 6.3.4 Retaining Wall Backfill

Backfill material should conform to the following:

- Plasticity Index less than 20
- Largest particle should not exceed 2 inches in largest diameter

Backfill materials should be placed in level lifts about 6 to 8 inches in loose thickness. Backfill should be compacted in accordance with the following table:

Material Type	Moisture Condition	% Relative Compaction
Cohesive Soils (silts & clays)	At least 5% above optimum	85% to 90%
Granular Soils (sands & gravels)	At least 2% above optimum	At least 90%

## 6.4 Preliminary Earthwork Recommendation

### 6.4.1 Site Preparation & Grading

Site grading is not anticipated. Should grading occur, site preparation and grading should consist of the following:

1. Vegetation and debris should be removed. The cuttings should be scattered away from the area of the structural fill. It is preferential for cuttings to be spread in open space areas.
2. Area to receive engineered fill should be scarified a minimum of 12 inches, moisture conditioned and compacted. Moisture conditioning and compaction should be in accordance with the engineered fill specifications below.
3. Engineered Fill should be moisture conditioned in accordance with the following table.

Material Type	Moisture Condition	% Relative Compaction
Cohesive Soils (silts & clays)	At least 5% above optimum	85% to 90%
Granular Soils (sands & gravels)	At least 2% above optimum	At least 90%

- Relative compaction refers to the in-place dry density of soil expressed as a percentage of the maximum dry density determined by ASTM D1557 compaction test procedure. Optimum moisture is the water content (percentage by dry weight) corresponding to the maximum dry density.
- Engineered fill should be properly moisture conditioned and placed in thin lifts (normally 6 to 8 inches depending on the compaction equipment) and compacted as discussed above.
- Observation and soil density tests should be performed during grading to assist the contractor in obtaining the required degree of compaction and proper moisture content.
- The soils engineer should be notified at least 48 hours prior to any grading operations. The procedures and methods of grading may then be discussed between the contractor and the soils engineer.

#### 6.4.2 Cut/Fill Transition Pads

For all cut/fill transition pads, the cut portion should be overexcavated at least 3 feet deep below pad grade and replaced with engineered fill. Where engineered fill depths are less than 3 feet then the ground should be overexcavated to create a minimum of 3 feet of engineered fill. The intent is for each of these building pads to be underlain by a minimum of 3 feet of engineered fill. (Overexcavation may consist of removing 2 feet and scarifying 1 foot).

#### 6.4.3 Cut Transition Pads

Cut Pads should be scarified at least 12 inches below pad grade, moisture conditioned and compacted.

#### 6.4.4 Fill Slopes

Based on the Preliminary Grading Plans, proposed fill slopes are less than 6 feet in height. It is our opinion that fill slopes less than 10 feet in height can be constructed at a gradient of 2 Horizontal to 1 Vertical (2H:1V) or flatter.

Based on the Preliminary Grading Plan, Keyways will likely be need for the fill slopes on Lots 9 & 18 and 25 & 27. Keyways may be assumed to include the following (Plate 5 for detail):

- Minimum Width – 15 feet
- Minimum Depth – 3 feet deep at the toe side
- Subdrain – 4-inch diameter SDR 35 perforated pipe, bedded on at least 6 inches of Class 2 Permeable Material, the sides covered by at least 10 inches and the top covered with at least 14 inches of Class 2 Permeable Material.

#### 6.4.5 Cut Slopes

Based on the Preliminary Grading Plans, proposed cut slopes are less than 6 feet in height. It is our opinion that cut slopes less than 10 feet can be constructed at a gradient of 2 Horizontal to 1 Vertical (2H:1V) or flatter.

## 6.5 Preliminary Underground Utilities Recommendations

### 6.5.1 Trench Excavations

Excavations should conform to applicable State and Federal industrial safety requirements. Where trench excavations are more than 5 feet deep, they should be sloped and/or shored. Trench walls should be sloped no steeper than 1½ H:1V in dry granular soils, and no steeper than 1H:1V in dry cohesive soils. Flatter trench slopes may be required if seepage is encountered during construction or if exposed soil conditions differ from those encountered by the borings. If shoring is used, shoring systems should conform to the Construction Safety Orders of the State of California (Section 1541.1.).

### 6.5.2 Trench Backfill

Materials quality, placement procedures and compaction operations for utility pipe bedding and shading materials should meet applicable agency requirements. Utility trench backfill above the shading materials may consist of native soils processed to remove rubble, rock fragments over 4 inches in largest dimension, debris, vegetation and other undesirable materials. Backfill materials should be placed in level lifts about 6 to 8 inches in loose thickness. Backfill should be compacted in accordance with the following table:

Material Type	Moisture Condition (% Above Optimum)	% Relative Compaction
Cohesive Soils (silts & clays)	At least 5% above optimum	88% to 92%
Granular Soils (sands & gravels)	At least 2% above optimum	At least 90%
Upper Two Feet of Subgrade Soils	At least 5% above optimum	At least 95%

No jetting is permissible on this project.

## 6.6 Pavement Sections

### 6.6.1 Preliminary Flexible Pavement Sections

The following pavement analyses are based upon an assumed R-value of 5 for the subgrade soil, the Caltrans Design Method for Flexible Pavement (20-year life cycle), and traffic indices (TI), which are indications of load frequency and intensity.

Traffic Index	AC (in)	Class 2 AB (in)	Total (in)
5	3	10	13
6	3	14	17
7	4	15 ½	19 ½

We recommend samples be collected for R-Value testing during the Design Level Geotechnical Investigation. R-Values above 5 may result in reduced pavement sections.

### 6.6.2 Subgrade

Prior to subgrade preparation, utility trench backfill should be properly placed and compacted. Subgrade soils for asphalt concrete pavement should be compacted to at least 95 percent relative compaction to provide a

smooth, unyielding surface. Subgrade soils should be maintained in a moist and compacted condition until covered with the complete pavement section.

### 6.6.3 Aggregate Base

Class 2 aggregate base should conform to the requirements in Section 26, Caltrans Standard Specifications. The aggregate base should be placed in thin lifts in a manner to prevent segregation, uniformly moisture conditioned, and compacted to at least 95 percent relative compaction to provide a smooth, unyielding surface.

### 6.6.4 Pavement Edge Drains

Pavement edge drains are a pavement drainage system designed to collect and divert ponding water at the aggregate base and subgrade contact. Ponding water can result in a weakend subgrade and potentially result in premature pavement failure.

Pavement edge drains should consist of a 4 inch diameter perforated SDR 23.5 or Schedule 40 pipe surrounded by at least 2 inches of Class 2 Permeable Material. The top of Class 2 Permeable Material should be located at the bottom of the Class 2 Aggregate Base.

For planning purposes, a pavement edge drain will likely need to be installed at the northern terminus of B Court and extend along A Street in front of Lots 25 and 26.

## 6.7 Drainage & Landscaping

Proper site drainage is important for the long-term performance of the proposed buildings and site improvements. Positive surface drainage should be provided around the buildings to direct surface water away from foundations. We recommend the ground surface within five feet of the building perimeters slope down, away from the buildings with a surface gradient of at least two percent. Roof downspouts should be discharged away from the foundations into controlled drainage facilities.

When selecting landscaping, we recommend that drought resistant and low water plants be selected. When possible, trees should be avoided adjacent to buildings, concrete flatwork and roadways. Once landscaped, watering and maintenance should be consistent in improved areas as changes in soil moisture can cause volumetric changes in expansive soils.

## 7 Limitations

The conclusions and recommendations of this report are based upon the information provided to us regarding the proposed project, subsurface conditions encountered at the field exploration locations, and professional judgment. This study has been conducted in accordance with currently accepted standards of geotechnical engineering practice; no other warranty is expressed or implied.

The field exploration locations were determined by pacing from the existing surface features and should be considered approximate only. Site conditions described in the text are those existing at the time of our field explorations and are not necessarily representative of such conditions at other locations and times.

The Boring Logs show subsurface conditions at the locations and on the date indicated. It is not warranted that they are representative of such conditions elsewhere or at other times. In the event that changes in the nature,

design or location of the proposed project are planned or if subsurface conditions differ from those described in this report, then the conclusions and recommendations in this report shall be considered invalid, unless the changes are reviewed and the conclusions and recommendations are modified or approved in writing.

## 8 Additional Services

Prior to construction, our firm should be provided the opportunity to review the plans and specifications to determine if the recommendations of this report have been implemented in those documents. We would appreciate the opportunity to meet with the contractors prior to the start of construction to discuss the procedures and methods used. This can facilitate the performance of the construction operation and minimize possible misunderstanding and construction delays.

To a degree, the performance of the proposed project is dependent on the procedures and quality of the construction. Therefore, we should observe the contractor's procedures, the exposed soil conditions, and field and laboratory testing during construction. These observations will allow us to check the contractor's work for conformance with the intent of our recommendations and to observe any unanticipated soil conditions that could require modification of our recommendations.

## EXPLANATION

### LIQUEFACTION ZONES

Areas where historical occurrence of liquefaction, or local geological, geotechnical and ground water conditions indicate a potential for permanent ground displacements such that mitigation as defined in Public Resources Code Section 2693(c) would be required.

### EARTHQUAKE-INDUCED LANDSLIDE ZONES

Areas where previous occurrence of landslide movement, or local topographic, geological, geotechnical and subsurface water conditions indicate a potential for permanent ground displacements such that mitigation as defined in Public Resources Code Section 2693(c) would be required.

## PHASE I ENVIRONMENTAL SITE ASSESSMENT

Dear Ms. Antonescu:

ENGEO is pleased to present our phase I environmental site assessment of the subject property (Property) located in Pleasanton, California. The attached report includes a description of the site assessment activities, along with ENGEO's findings, opinions, and conclusions regarding the Property.

ENGEO has the specific qualifications based on education, training, and experience to assess the nature, history, and setting of the Property, and has developed and performed all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312 and the American Society for Testing and Materials (ASTM) Practice E1527-21. We declare that, to the best of our professional knowledge and belief, the responsible charge for this study meets the definition of Environmental Professional as defined in Section 312.10 of 40 CFR Part 312 and ASTM E1527-21.

We are pleased to be of service to you on this project. If you have any questions concerning the contents of our report, please contact us.

Sincerely,

ENGEO Incorporated

  
Lauren Becker, PE

  
Jeffrey A. Adams, PhD, PE

## EXECUTIVE SUMMARY

ENGEO conducted a phase I environmental site assessment (ESA) for the subject property located at Vineyard Avenue and Thiessen Street in Pleasanton, California (Property). The Property is approximately 10.34 acres in area and is identified by Assessor's Parcel Number (APN) 946-4619-001-00.

The Property consists of vacant, undeveloped land with seasonal grasses and shrubs. An asphalt roadway is located along the southern Property boundary and connects to roundabouts at Thiessen Street and Manoir Lane. Review of historical records indicates that the Property was cultivated with row crops by 1940 or earlier. By 1979, row crops no longer appeared on the Property. Between 1998 and 2006, the roadways on and surrounding the Property were constructed. The Property has appeared similar since. The proposed development for the Property includes 28 single-family residential lots in the center, a park in the northern area, and vineyards in the southern area of the Property.

The Property was previously considered for a Pleasanton Unified School District elementary school site and is listed as a school investigation site on EnviroStor under ID 01010006. Berlogar Geotechnical Consultants (Berlogar) conducted a phase II ESA for the Property in 2000 to assess the potential presence of residual organochlorine pesticides (OCPs), chlorinated herbicides, and metals in preparation for site redevelopment. The scope of the investigation included drilling 13 borings (B-1 through B-13) to a total depth of 6 feet below ground surface (bgs) and collection of samples at depths of 1.5, 3.5, and 6 feet bgs. The analytical results indicated that pesticides and herbicides were not detected above laboratory reporting limits. All metal concentrations were below current residential screening levels and/or naturally occurring background levels. Based on the records review and sampling results, Berlogar concluded that there was no evidence of the on-site use, handling, generation, or storage of hazardous materials or wastes; and that no remediation would be necessary for the Property. The California Department of Toxic Substances Control (DTSC) reviewed Berlogar's report and issued a letter dated March 24, 2000, indicating that no further action was necessary with respect to additional investigation and remediation of the Property.

This assessment included a review of local, state, tribal, and federal environmental record sources, standard historical sources, aerial photographs, fire insurance maps, and physical setting sources. A reconnaissance of the Property was completed to review site use and current conditions to check for the storage, use, production, or disposal of hazardous or potentially hazardous materials and to conduct written/oral interviews with persons knowledgeable about current and past site use.

The site reconnaissance and records review did not find documentation or physical evidence of soil, soil gas, or groundwater impairments associated with the use or past use of the Property. A review of regulatory databases maintained by county, state, tribal, and federal agencies found no documentation of hazardous materials violations or discharge on the Property and did not identify contaminated facilities within the appropriate ASTM search distances that would reasonably be expected to impact the Property.

Based on the findings of this assessment, no Recognized Environmental Conditions (RECs), no historical RECs, and no controlled RECs were identified for the Property.

Based on the site reconnaissance, we present information on a feature of potential environmental concern that were either contained in the databases or observed on the Property. This feature was not considered to be an REC. We briefly discuss the feature below.

- The origin of the gravel stockpile is not known at this time. If the material is to be used as fill within the Property, records of their source should be made available and reviewed to confirm it is appropriate for use at a residential development, which may include a review of representative analytical data.

We have performed a phase I environmental site assessment in general conformance with the scope and limitations of ASTM E1527-21 and the standards and practices of the All Appropriate Inquiry – Final Rule (40 Code of Federal Regulations Part 312). Any exception to, or deletions from this practice are described in Sections 6.0 and 8.1 of the report.

It is our opinion that the findings of this study are based on a sufficient level of information obtained during our contracted scope of services to render a conclusion as to whether additional appropriate investigation is required to identify the presence or likely presence of a REC. The following data gap was identified.

- A completed Key Site Manager-based environmental site questionnaire was not provided to us prior to the preparation of this report.

The data gap identified during this process does not affect the conclusions as to the presence or lack of presence of RECs at the Property. This assessment has revealed no evidence of RECs in connection with the Property. We recommend no further environmental studies at this time.

Please note, the findings from this report are valid until March 24, 2025, and updates of portions of the assessment may be necessary after September 24, 2024.

## 1.0 INTRODUCTION

### 1.1 PURPOSE OF PHASE I ENVIRONMENTAL SITE ASSESSMENT

This assessment was performed at the request of Trumark Homes, LLC, for the purpose of environmental due diligence during property acquisition. The objective of this phase I environmental site assessment is to identify Recognized Environmental Conditions (RECs) associated with the Property. As defined in the ASTM Standard Practice E1527-21, an REC is “(1) the presence of hazardous substances or petroleum products in, on, or at the subject property due to a release to the environment; (2) the likely presence of hazardous substances or petroleum products in, on, or at the subject property due to a release or likely release to the environment; or (3) the presence of hazardous substances or petroleum products in, on, or at the subject property under conditions that pose a material threat of a future release to the environment.”

### 1.2 DETAILED SCOPE OF SERVICES

The scope of services performed included the following.

- A review of previous environmental reports prepared for the Property.
- A review of publicly available and practicably reviewable standard local, state, tribal, and federal environmental record sources.
- A review of publicly available and practicably reviewable standard historical sources, aerial photographs, fire insurance maps, and physical setting sources.
- A reconnaissance of the Property to review site use and current conditions. The reconnaissance was conducted to check for the storage, use, production, or disposal of hazardous or potentially hazardous materials.
- Written/oral interviews with owners/occupants and public sector officials.
- Preparation of this report with our findings, opinions, and conclusions.

### 1.3 SITE LOCATION AND DESCRIPTION

The Property is located at Vineyard Avenue and Thiessen Street, Pleasanton, California (Figures 1 and 2). The approximately 10.34-acre Property is identified as APN 946-4619-001-00 (Figure 3) and is vacant, consisting of seasonal grasses and vegetation. An asphalt roadway is located in the southern area of the Property. The roadway connects to the roundabouts at Thiessen Street and Manoir Lane and was constructed when the Property was under consideration for an elementary school site.

### 1.4 CURRENT USE OF PROPERTY AND ADJOINING PROPERTIES

The Property is presently zoned as OZ/OS (Housing Opportunity Zone/Open Space) public/institutional land (PUD-Elementary School) based on review of the online City of Pleasanton Zoning Lookup tool. The proposed development for the Property includes 28 single-family residential lots in the south and central area of the Property, and vineyards in the northern area of the Property.

Based on a review of current records and our site reconnaissance, the adjoining site uses are summarized below.

**TABLE 1.4-1: Adjoining Site Uses**

DIRECTION	SITE USE
North	Stormwater collection channel
South	Old Vineyard Avenue roadway; single-family residential houses
East	Single-family residential houses; vineyards
West	Single-family residential houses

## 1.5 SITE AND VICINITY CHARACTERISTICS

According to published topographic maps, site grades at the Property range from approximately Elevation 425 feet (NAD27) in the south to approximately Elevation 385 feet to the north. Review of the Geologic Map of the Livermore quadrangle (Dibblee and Minch, 2006) found that the Property is underlain by Holocene-aged surficial sediments consisting of sand and gravel of major stream channels (Qg) and alluvial gravel, sand, and clay of valley areas (Qa).

Geocheck – Physical Setting Source Summary of the Environmental Data Resources, Inc. (EDR) report (Appendix A) indicated seven federal United States Geological Survey (USGS) and 28 state wells located within 1 mile of the Property. Well Number T10000000095 - W-2 is mapped approximately 0.45 mile west of the Property, and 50 groundwater level measurements are reported for this well between 2011 and 2023. Groundwater in the vicinity of Property was observed between 73.38 feet and 76.67 feet below the ground surface (bgs).

We reviewed the Department of Water Resources Online Water Data Library for depth to groundwater in the vicinity of the Property. The website identified five wells within 1 mile of the Property. Groundwater depth has been recorded at depths ranging between approximately 47 and 175 feet bgs.

The site-specific depth to groundwater and direction of groundwater flow were not determined as part of this assessment. Fluctuations in groundwater levels may occur seasonally and over a period of years due to variations in precipitation, temperature, irrigation, and other factors.

We reviewed the Department of Conservation, Geologic Energy Management (CalGEM), website and map database to determine if any historical oil and gas wells were located within the Property. No oil or gas wells were mapped within 1 mile of the Property.

We reviewed the National Pipeline Mapping System (NPMS) public viewer website for information about petroleum, natural gas, or hazardous liquid storage, processing, or transmission facilities in the vicinity of the Property. No facilities or pipelines were mapped within ¼ mile of the Property.

## 1.6 INDOOR AIR QUALITY

An evaluation of indoor air quality, mold, or radon was not included as part of the contracted scope of services. The California Department of Public Health has conducted studies of radon risks throughout the state, sorted by zip code. Results of the studies indicate that 27 tests have been

conducted within the Property zip code, with two tests exceeding the current United States Environmental Protection Agency (EPA) action level of 4 picocuries per liter (pCi/L)<sup>1</sup>.

In accordance with ASTM E2600-15 (Tier 1) (Standard Guide for Vapor Encroachment Screening on Property Involved in Real Estate Transactions); there are no potential petroleum hydrocarbon sources for vapor intrusion within 1/10 mile of the Property or volatile organic compound (VOCs) sources within 1/3 mile of the Property.

## 2.0 PREVIOUS ENVIRONMENTAL REPORTS

Berlogar Geotechnical Consultants. 2000. Phase II Environmental Investigation, Brian Lin Property, Vineyard Avenue, Pleasanton, California. February 17, 2000.

Berlogar Geotechnical Consultants (Berlogar) prepared a phase II ESA for the Property in 2000. At the time of the assessment, the Property was used as fenced grazing land. The Property consisted of 12 acres situated along the western part of the larger Brian Lin property and was under consideration for an elementary school site.

The phase II ESA summarized a 1999 phase I ESA also prepared by Berlogar (not available for ENGEO's review), which noted that the Property had been used as grazing land and an orchard for approximately the past 40 years, though the crop grown in the orchard was unknown. Although there was no evidence of storage or application of large quantities of pesticides or herbicides, because the Property was being considered for a school site, the report recommended that near-surface soil samples be collected and analyzed for these constituents to evaluate their presence in soil. The phase I ESA also noted the presence of a trailer and small outbuildings on the proposed school site. The trailer was about 20 feet in length and located in the northeastern corner of the Property and appeared to be vacant at the time.

The scope of the investigation included drilling 13 borings (B-1 through B-13) to a total depth of 6 feet bgs and collection of samples at depths of 1.5, 3.5, and 6 feet bgs. The shallowest two samples from each boring (total of 26) were analyzed for organochlorine pesticides (OCPs) by EPA Method 8080, chlorinated herbicides by EPA Method 8150, and CAM 17 metals by EPA Method 6010B/7471A. The two shallowest samples from soil Boring B-13 collected near the northeastern corner of the Property were also analyzed for total petroleum hydrocarbons (TPH) by EPA Method 8015M.

The analytical results indicated that pesticides, herbicides, and TPH were not detected above laboratory reporting limits. Several metals were detected above laboratory reporting limits. The results were compared to the EPA Region 9 Preliminary Remediation Goals in effect at the time of the assessment. Results are compared to the current San Francisco Bay Regional Water Quality Control Board (SFBRWQCB) environmental screening levels (ESLs) for residential soil<sup>2</sup> and, for arsenic only, its naturally occurring background level for the Bay Area (11 milligrams per kilogram (mg/kg)).<sup>3</sup> All metal concentrations are below the residential ESLs and/or naturally occurring background levels.

---

<sup>1</sup> California Department of Public Health – Radon Program –  
(<https://www.cdph.ca.gov/Programs/CEH/DRSEM/CDPH%20Document%20Library/EMB/Radon/Radon%20Test%20Results.pdf>).

<sup>2</sup> San Francisco Bay Regional Water Quality Control Board (SFBRWQCB); Environmental Screening Levels (ESLs); Direct Exposure Human Health Risk Levels: Residential Shallow Soil Exposure (Table S-1); 2019 (Rev. 2).

<sup>3</sup> Duverge, D.J., Establishing Background Arsenic in Soil of the Urbanized San Francisco Bay Region, December 2011.

Based on the records review and sampling results, Berlogar concluded that there was no evidence of the on-site use, handling, generation, or storage of hazardous materials or wastes, and no indications that underground storage tanks had been on the site. Berlogar concluded that no remediation would be necessary for the Property.

The Department of Toxic Substances Control (DTSC) issued a letter dated March 24, 2000, indicating that no further action was necessary with respect to additional investigation and remediation of the Property. DTSC noted that if previously unidentified contamination was discovered at the Property, additional assessment, investigation, and/or cleanup may be required. ENGEO concurs with Berlogar's and DTSC's findings and recommends no additional environmental studies at this time.

ENGEO. 2024. Phase I Environmental Site Assessment. Vineyard Avenue, Pleasanton, California. February 1, 2024.

ENGEO prepared a phase I ESA for the Property in 2024. At the time of the assessment, the property was vacant, undeveloped land with seasonal grasses and shrubs. The phase I ESA was performed as part of environmental due diligence for the proposed development of 28 single-family residential lots in the center, a park in the northern area, and vineyards in the southern area of the Property.

The site reconnaissance and records review did not find documentation or physical evidence of soil, soil gas, or groundwater impairments associated with the use or past use of the Property. Based on the findings of the assessment, no RECs, no historical RECs, and no controlled RECs were identified in connection with the Property, and no further environmental studies were recommended.

## **3.0 RECORDS REVIEW**

### **3.1 PROPERTY RECORDS**

#### **3.1.1 Title Report/Ownership**

The Title Report lists recorded land title detail, ownership fees, leases, land contracts, easements, liens, deficiencies, and other encumbrances attached to or recorded against a subject property. Laws and regulations pertaining to land trusts vary from state to state and the detail of information presented in a Title Report can vary greatly by jurisdiction. As a result, ENGEO utilizes a Title Report, when provided to us, as a supplement to other historical record sources. ENGEO assumes that any environmental liens, activity use limitations (AULs), and/or institutional controls for the Property are noted in the Preliminary Title Report.

A Preliminary Title Report for the Property, prepared by First American Title Company and dated February 15, 2024, was provided for our review. The Property title is vested in *PLEASANTON UNIFIED SCHOOL DISTRICT, A CALIFORNIA KINDERGARTEN THROUGH TWELFTH GRADE EDUCATIONAL INSTITUTION*.

No references to environmental liens, deed restrictions, or other potential environmental issues were noted. This report is included in Appendix B.

### 3.1.2 Environmental Liens and Activity Use Limitations

The Preliminary Title Report did not reference environmental liens, deed restrictions, or other potential environmental issues. We also reviewed two engineering control (EC) and institutional control (IC) registries: EnviroStor, a website maintained by the State of California Department of Toxic Substances Control, and GeoTracker, a website maintained by the State of California Water Resources Control Board, for environmental liens or AULs associated with the Property. No records of environmental liens or AULs were noted.

## 3.2 HISTORICAL RECORD SOURCES

The purpose of the historical record review is to develop a history of the previous uses or occupancies of the Property and surrounding areas to identify those uses or occupancies that are likely to have led to recognized environmental conditions on the Property.

### 3.2.1 Historical Topographic Maps/Aerial Photographs/Sanborn Maps

Historical USGS topographic maps and aerial photographs were reviewed to determine if discernible changes pertaining to the Property had been recorded. EDR provided the following maps and photographs, presented in Appendices C and D. A Sanborn fire insurance map search did not identify maps for the Property; the search report is presented in Appendix E.

**TABLE 3.2.1-1: Historical Review Summary**

HISTORICAL MAP/PHOTOGRAPH	YEARS
Topographic Maps	1906, 1941, 1947, 1953, 1961, 1968, 1973, 1980, 2012, 2015, 2018, 2021
Aerial Photographs	1940, 1949, 1958, 1966, 1968, 1979, 1982, 1993, 1998, 2006, 2009, 2012, 2016, 2020
Sanborn Maps	N/A

In the 1906 topographic map, the Property is depicted as undeveloped. Old Vineyard Avenue is depicted along the southern Property boundary. A creek is depicted north of Vineyard Avenue. In the 1940 aerial photograph, the Property appears to be cultivated with crops in wide rows. Nearby sites are also used for agricultural purposes, including orchards and row crops. The Property appears similar until the 1979 aerial photograph, in which crops no longer appear on the Property. Between 1998 and 2006, the streets surrounding the Property were constructed, including Vineyard Avenue, Thiessen Street, Manoir Lane, and the connecting roundabouts. The Property has appeared similar since.

### 3.2.2 City Directory

City Directories, published since the 18th century for major towns and cities, list the name of the resident or business associated with each address. A city directory search conducted by EDR is located in Appendix F. The Property is not listed in the city directory listings, as it is not associated with an address. Nearby properties consist of residential listings.

## 3.3 ENVIRONMENTAL RECORD SOURCES

EDR performed a search of federal, tribal, state, and local databases regarding the Property and nearby properties. Details regarding the databases searched by EDR are provided in Appendix A.

A list of the facilities documented by EDR within the approximate minimum search distance of the Property is provided below.

### 3.3.1 Environmental Records

#### 3.3.1.1 Property

The Property is not listed on Environmental Record source databases. However, the Property is listed on EnviroStor as Brian Lin Property/Joshua Neal Elementary School (ID 01010006). The Department of Toxic Substances Control (DTSC) reviewed the 1999 Phase I ESA and 2000 Phase II ESA prepared by Berlogar during the Property’s evaluation for a potential school site. DTSC issued a letter dated March 24, 2000, stating that the soil sampling data and site visit provided sufficient data to conclude that no actual or potential hazardous materials releases were found that would post a threat to human health or the environment under any land use.

#### 3.3.1.2 Other Properties

The following databases include facilities listed within the appropriate ASTM search distances of the Property on Environmental Records sources.

**TABLE 3.3.1.2-1: Environmental Database Listings for Nearby Properties**

FACILITY	STREET	DATABASES
Topcon Solutions Center/ Topcon Positioning Systems, Inc.	1751 Vineyard Avenue	CERS, CERS HAZ WASTE, RCRA NONGEN / NLR
Gravel Pits	Not listed	MINES MRDS
RMC Lonestar (Toxic) / RMC Pacific Materials, Inc.	1544 Stanley	ALAMEDA COUNTY CS, CA FID UST, CERS, CHMIRS, CIWQS, CORTESE, CPS-SLIC, EMI, ENF, HIST CORTESE, LUST, NOTIFY 65, NPDES, SWEEPS UST, WDS
Pietronave LF	750 Pietronave Lane	SWF/LF

Based on the distances to the identified database sites, regional topographic gradient, and the EDR findings, it is unlikely that the above-stated database sites pose an environmental risk to the Property. One property is listed on the “Orphan Summary” list, but it appears to be located beyond the ASTM recommended radius search criteria.

### 3.4 REGULATORY AGENCY FILES AND RECORDS

The following agencies were contacted pertaining to possible past development and/or activity at the Property.

**TABLE 3.4-1: Regulatory Agency Records**

NAME OF AGENCY	RECORDS REVIEWED
City of Pleasanton Building and Planning Departments	We contacted the City of Pleasanton Building and Planning Departments on March 25, 2024, regarding historical building permit records for the Property. The Building and Planning Departments indicated they have no files pertaining to the Property.

NAME OF AGENCY	RECORDS REVIEWED
Livermore-Pleasanton Fire Department	We contacted the Livermore-Pleasanton Fire Department on March 25, 2024, regarding environmental records for the Property. The Livermore-Pleasanton Fire Department indicated they have no files pertaining to the Property.
City of Pleasanton Code Enforcement Department	We contacted the City of Pleasanton Code Enforcement Department on March 25, 2024, regarding records of illegal dumping and other code violations for the Property. The Code Enforcement Department indicated they have no files pertaining to the Property.
Alameda County Department of Environmental Health	We contacted the Alameda County Department of Environmental Health on March 25, 2024, regarding environmental records for the Property. The Alameda County Department of Environmental Health indicated they have no files pertaining to the Property.
Zone 7 Water Agency	We contacted Zone 7 Water Agency on March 25, 2024, regarding well records for the Property. Zone 7 provided a map indicating that a groundwater well is potentially located in the northern area of the Property, but noted that wells are plotted based on limited information. We did not observe this well during the site reconnaissance and confirmed with the Property owner that no groundwater wells are located on the Property.
Alameda County Assessor's Office	We reviewed online parcel maps provided by the Alameda County Assessor's Office. The property boundary and APNs provided in the EDR radius map report are consistent with the online parcel maps.
California State Water Resources Control Board (SWRCB)	We reviewed GeoTracker, the website maintained by SWRCB, for files pertaining to the Property. No listings were found for the Property.
Department of Toxic Substances Control (DTSC)	We reviewed EnviroStor, the website maintained by DTSC, for files pertaining to the Property. The Property is listed under case ID 01010006. DTSC has determined no further action is necessary for the Property. Refer to Section 3.3.1.1 for more information.

## 4.0 SITE RECONNAISSANCE

### 4.1 METHODOLOGY

We conducted a reconnaissance of the Property on June 14, 2024. The reconnaissance was performed by Viridiana Navarro, a Staff Engineer of ENGEO. The Property was viewed for hazardous materials storage, superficial staining or discoloration, debris, stressed vegetation, or other conditions that may be indicative of potential sources of soil or groundwater contamination. The Property was also checked for evidence of fill/ventilation pipes, ground subsidence, or other evidence of existing or pre-existing underground storage tanks. Photographs taken during the site reconnaissance are presented in Figures 4A and 4B.

### 4.2 GENERAL SITE SETTING

The Property is accessed via a gate on Thiessen Street. The Property consists of vacant, undeveloped land with seasonal grasses and shrubs. An asphalt roadway is located in the southern area of the Property. The roadway connects to the roundabouts at Thiessen Street and Manoir Lane and was constructed when the Property was under consideration for an elementary

school site. A culvert that drains water from the area south of the Property is located in the south-central area of the Property. The Property slopes downhill to the north. A depressed stormwater channel is located to the north of the Property.

### 4.3 EXTERIOR OBSERVATIONS

The following table summarizes our observations during the reconnaissance.

**TABLE 4.3-1: Exterior Site Observations**

FEATURE TYPE	OBSERVATIONS
Structures	No structures were observed during the site reconnaissance.
Hazardous Substances and Petroleum Products in Connection with Identified Uses	No hazardous substances or petroleum products were observed within the Property during the site reconnaissance.
Storage Tanks (underground and above-ground)	No above-ground storage tanks or evidence of existing underground storage tanks were observed during the site reconnaissance.
Roads	The Property is accessed via a gate on Thiessen Street. No roads are located on the Property.
Strong, Pungent, or Noxious Odors and Their Sources	No odors indicative of hazardous materials or petroleum material impacts were noted at the time of the reconnaissance.
Standing Surface Water and Pools or Sumps Containing Liquids	No pools of potentially hazardous liquid were observed within the Property at the time of our reconnaissance.
Drums, Totes, and Intermediate Bulk Containers	No drums were observed on the Property at the time of the reconnaissance.
Polychlorinated Biphenyls (PCBs) Containing Equipment	No potential PCB-containing equipment, including transformers, were observed within the Property during our site reconnaissance.
Hazardous Substances and Petroleum Product Containers	No Hazardous substances or petroleum product containers were observed on the Property at the time of our reconnaissance.
Stains or Corrosion on Floors, Walls, or Ceilings (Except Water Staining)	No stains or corrosion on floors, walls, or ceilings were observed on the Property at the time of our reconnaissance.
Drains and Sumps	No sumps were observed within the Property at the time of our reconnaissance. A culvert outlet with riprap was observed in the south-central area of the Property. Stormwater flows from the south, outside of the Property, and collects in an area with riprap.
Pits, Ponds, and Lagoons	No pits, ponds, or lagoons were observed within the Property at the time of our reconnaissance.
Stained Soil/Pavement	No stained soil or pavement was observed within the Property at the time of our reconnaissance.
Stressed Vegetation	No signs of stressed vegetation were observed on the Property at the time of our reconnaissance.
Solid Waste/Debris	No disposal of solid waste was observed at the Property.
Stockpiles/Fill Material	Gravel stockpiles were observed on the Property during the reconnaissance. See Figure 4A, Photo 3.
Wastewater	No wastewater conveyance systems were observed at the Property during the reconnaissance.
Wells	No wells were found within the Property during our site reconnaissance.

FEATURE TYPE	OBSERVATIONS
Septic Systems	No septic systems were found within the Property during our site reconnaissance.

#### 4.4 ASBESTOS, LEAD, AND PCB-CONTAINING MATERIALS

An asbestos, lead, and PCB-containing building material survey was not conducted as part of this assessment. Additionally, no structures are currently located on the Property.

#### 5.0 INTERVIEWS

Ms. Heide Antonescu of Trumark completed a Client-based environmental site questionnaire pertaining to applicable environmental information regarding the Property on June 5, 2024. In the questionnaire, Ms. Antonescu did not identify potentially environmentally related issues with the Property. Ms. Antonescu is unaware of commonly known, reasonably ascertainable, or specialized knowledge indicative of releases or threatened releases that is material to the potential presence of RECs. The questionnaire is presented in Appendix G.

A completed Key Site Manager-based environmental site questionnaire was not provided to us prior to the preparation of this report.

#### 6.0 FINDINGS AND OPINIONS

This assessment included a review of local, state, tribal, and federal environmental record sources, standard historical sources, aerial photographs, fire insurance maps, and physical setting sources. A reconnaissance of the Property was completed to review site use and current conditions to check for the storage, use, production, or disposal of hazardous or potentially hazardous materials and to conduct written/oral interviews with persons knowledgeable about current and past site use.

The site reconnaissance and records review did not find documentation or physical evidence of soil, soil gas, or groundwater impairments associated with the use or past use of the Property. A review of regulatory databases maintained by county, state, tribal, and federal agencies found no documentation of hazardous materials violations or discharge on the Property and did not identify contaminated facilities within the appropriate ASTM search distances that would reasonably be expected to impact the Property.

Based on the findings of this assessment, no RECs, no historical RECs, and no controlled RECs were identified for the Property.

Based on the site reconnaissance, we present information on a feature of potential environmental concern that were either contained in the databases or observed on the Property. This feature was not considered to be an REC. We briefly discuss the feature below.

- The origin of the gravel stockpile is not known at this time. If the material is to be used as fill within the Property, records of their source should be made available and reviewed to confirm it is appropriate for use at a residential development, which may include a review of representative analytical data.

## 6.1 DATA GAPS

It is our opinion that the findings of this study are based on a sufficient level of information obtained during our contracted scope of services to render a conclusion as to whether additional appropriate investigation is required to identify the presence or likely presence of a REC. The following data gap was identified.

- A completed Key Site Manager-based environmental site questionnaire was not provided to us prior to the preparation of this report.

The data gap identified during this process does not affect the conclusions as to the presence or lack of presence of RECs at the Property.

## 6.2 SIGNIFICANT ASSUMPTIONS OR DEVIATIONS FROM ASTM STANDARD PRACTICE

There were no significant deviations from ASTM Standard Practice E1527-21 in the preparation of this report.

## 7.0 CONCLUSIONS

It is our opinion that the findings of this study are based on a sufficient level of information obtained during our contracted scope of services to render a conclusion as to whether additional appropriate investigation is required to identify the presence or likely presence of a REC.

We have performed a phase I environmental site assessment of the Property in general conformance with the scope and limitations of ASTM E1527-21 and the standards and practices of the All Appropriate Inquiry – Final Rule (40 Code of Federal Regulations Part 312). Any exception to, or deletions from this practice are described in Sections 6 and 8.1 of the report.

This assessment has revealed no evidence of Recognized Environmental Conditions in connection with the Property. We recommend no further environmental studies at this time.

## 8.0 LIMITATIONS

### 8.1 LIMITATIONS AND EXCEPTIONS OF ASSESSMENT

The professional staff at ENGEO strives to perform its services in a proper and professional manner with reasonable care and competence but is not infallible. The recommendations and conclusions presented in this report were based on the findings of our study, which were developed solely from the contracted services. The findings of the report are based in part on contracted database research, out-of-house reports, and personal communications. The opinions formed by ENGEO are based on the assumed accuracy of the relied upon data in conjunction with our relevant professional experience related to such data interpretation. We assume no liability for the validity of the materials relied upon in the preparation of this report.

This document must not be subject to unauthorized reuse; that is, reuse without written authorization of ENGEO. Such authorization is essential because it requires ENGEO to evaluate the document's applicability given new circumstances, not the least of which is passage of time. The findings from a phase I environmental site assessment are valid for 1 year after from the

earliest date of the following components: records review, site reconnaissance, interviews, declaration by environmental professional. Updates of portions of the assessment may be necessary after a period of 180 days of the earliest date of the four components.

A more extensive assessment that would include a subsurface exploration with laboratory testing of soil, soil gas, and groundwater samples could provide more definitive information concerning site-specific conditions. If additional assessment activities are considered for the Property and if other entities are retained to provide such services, ENGEO cannot be held responsible for any and all claims arising from or resulting from the performance of such services by other persons or entities. ENGEO can also not be held responsible from any and all claims arising or resulting from clarifications, adjustments, modifications, discrepancies, or other changes necessary to reflect changed field or other conditions.

## **8.2 SPECIAL TERMS AND CONDITIONS**

We have prepared this report for the exclusive use of our client, Trumark Homes, LLC. It is recognized and agreed that ENGEO has assumed responsibility only for undertaking the study for the Client. The responsibility for disclosures or reports to a third party and for remedial or mitigative action shall be solely that of the Client.

This phase I environmental site assessment is not intended to represent a complete soil, soil gas, or groundwater characterization, nor define the depth or extent of soil, soil gas, or groundwater contamination. It is intended to provide an evaluation of potential environmental concerns associated with the use of the Property. Laboratory testing of soil, soil gas, or groundwater samples was not within the scope of the contracted services. The assessment did not include an asbestos survey, an evaluation of lead-based paint, an inspection of light ballasts for polychlorinated biphenyls (PCBs), or a mold survey. A radon evaluation was not performed.

This report is based upon field and other conditions discovered at the time of preparation of ENGEO's assessment. Visual observations referenced in this report are intended only to represent conditions at the time of the reconnaissance. We would not be aware of site contamination, such as dumping and/or accidental spillage, which occurred subsequent to the reconnaissance conducted by ENGEO personnel.

## EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E1527 - 21), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E2247 - 16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E1528 - 22) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

### SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property. Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

### STANDARD ENVIRONMENTAL RECORDS

#### ***Lists of state and tribal landfills and solid waste disposal facilities***

SWF/LF: The Solid Waste Facilities/Landfill Sites records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data come from the Integrated Waste Management Board's Solid Waste Information System (SWIS) database.

A review of the SWF/LF list, as provided by EDR, has revealed that there is 1 SWF/LF site within approximately 0.5 miles of the target property.

<u>Equal/Higher Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>
PIETRONAVE LF Database: SWF/LF (SWIS), Date of Government Version: 11/06/2023 Facility ID: 01-CR-0035 Operational Status: Closed	750 PIETRONAVE LN	WNW 1/4 - 1/2 (0.475 mi.)	9	60

## EXECUTIVE SUMMARY

Regulation Status: Unpermitted

### ***Lists of state and tribal leaking storage tanks***

LUST: Leaking Underground Storage Tank (LUST) Sites included in GeoTracker. GeoTracker is the Water Boards data management system for sites that impact, or have the potential to impact, water quality in California, with emphasis on groundwater.

A review of the LUST list, as provided by EDR, has revealed that there is 1 LUST site within approximately 0.5 miles of the target property.

<u>Lower Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>

CPS-SLIC: Cleanup Program Sites (CPS; also known as Site Cleanups [SC] and formerly known as Spills, Leaks, Investigations, and Cleanups [SLIC] sites) included in GeoTracker. GeoTracker is the Water Boards data management system for sites that impact, or have the potential to impact, water quality in California, with emphasis on groundwater.

A review of the CPS-SLIC list, as provided by EDR, has revealed that there is 1 CPS-SLIC site within approximately 0.5 miles of the target property.

<u>Lower Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>

## EXECUTIVE SUMMARY

Status: No Action  
Status: Leak Confirmation  
Status: Preliminary Site Assessment Workplan Submitted  
Status: Case Closed

### ADDITIONAL ENVIRONMENTAL RECORDS

#### ***Local Lists of Hazardous waste / Contaminated Sites***

CERS HAZ WASTE: List of sites in the California Environmental Protection Agency (CalEPA) Regulated Site Portal which fall under the Hazardous Chemical Management, Hazardous Waste Onsite Treatment, Household Hazardous Waste Collection, Hazardous Waste Generator, and RCRA LQ HW Generator programs.

A review of the CERS HAZ WASTE list, as provided by EDR, and dated 10/16/2023 has revealed that there is 1 CERS HAZ WASTE site within approximately 0.25 miles of the target property.

<u>Lower Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>
TOPCON SOLUTIONS CEN	1751 VINEYARD AVE	ENE 0 - 1/8 (0.037 mi.)	A1	9

#### ***Other Ascertainable Records***

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 12/04/2023 has revealed that there is 1 RCRA NonGen / NLR site within approximately 0.25 miles of the target property.

<u>Lower Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>

#### **MINES MRDS: Mineral Resources Data System**

A review of the MINES MRDS list, as provided by EDR, and dated 08/23/2022 has revealed that there are 2 MINES MRDS sites within approximately 0.25 miles of the target property.

<u>Lower Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>
GRAVEL PITS		NE 1/8 - 1/4 (0.151 mi.)	3	20
GRAVEL PIT		ENE 1/8 - 1/4 (0.157 mi.)	4	21

## EXECUTIVE SUMMARY

Cortese: The sites for the list are designated by the State Water Resource Control Board (LUST), the Integrated Waste Board (SWF/LS), and the Department of Toxic Substances Control (Cal-Sites).

A review of the Cortese list, as provided by EDR, and dated 12/13/2023 has revealed that there is 1 Cortese site within approximately 0.5 miles of the target property.

<u>Lower Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>
<b>RMC LONESTAR</b> Cleanup Status: COMPLETED - CASE CLOSED	<b>1544 STANLEY BLVD</b>	<b>N 1/4 - 1/2 (0.329 mi.)</b>	<b>B8</b>	<b>38</b>

HIST CORTESE: The sites for the list are designated by the State Water Resource Control Board [LUST], the Integrated Waste Board [SWF/LS], and the Department of Toxic Substances Control [CALSTITES]. This listing is no longer updated by the state agency.

A review of the HIST CORTESE list, as provided by EDR, and dated 04/01/2001 has revealed that there is 1 HIST CORTESE site within approximately 0.5 miles of the target property.

<u>Lower Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>
<b>RMC LONESTAR</b> Reg Id: 01-0555	<b>1544 STANLEY BLVD</b>	<b>N 1/4 - 1/2 (0.329 mi.)</b>	<b>B8</b>	<b>38</b>

Notify 65: Listings of all Proposition 65 incidents reported to counties by the State Water Resources Control Board and the Regional Water Quality Control Board. This database is no longer updated by the reporting agency.

A review of the Notify 65 list, as provided by EDR, and dated 12/06/2023 has revealed that there is 1 Notify 65 site within approximately 1 mile of the target property.

<u>Lower Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>
<b>RMC PACIFIC MATERIAL</b>	<b>1544 STANLEY BOULEVA</b>	<b>N 1/4 - 1/2 (0.329 mi.)</b>	<b>B5</b>	<b>22</b>

UST FINDER RELEASE: US EPA's UST Finder data is a national composite of leaking underground storage tanks. This data contains information about, and locations of, leaking underground storage tanks. Data was collected from state sources and standardized into a national profile by EPA's Office of Underground Storage Tanks, Office of Research and Development, and the Association of State and Territorial Solid Waste Management Officials.

A review of the UST FINDER RELEASE list, as provided by EDR, and dated 06/08/2023 has revealed that there are 2 UST FINDER RELEASE sites within approximately 0.5 miles of the target property.

Citation: 22 CCR 12 66262.34(f) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(f)

Violation Description: Failure to properly label hazardous waste accumulation containers with the following requirements: "Hazardous Waste", name and address of the generator, physical and chemical characteristics of the Hazardous Waste, and starting accumulation date.

Violation Notes: Returned to compliance on 07/06/2015. OBSERVATION: Facility had one 5 gallon bucket of used oil with a blank hazardous waste label. All hazardous waste containers shall be marked with the following information: 1) the words Hazardous Waste ; 2) name and address of generator; 3) hazardous properties; 4) physical state; 5) composition (contents); 6) accumulation start date. CORRECTIVE ACTION: Facility properly labeled the hazardous waste label on the 5 gallon bucket of used oil. Since it cannot be determined how long the 5 gallon bucket of used oil has been on site, immediately contact RGW and submit documentation of removal to the CUPA by 7/5/2015.

Reclamation: Not reported  
POTW: Not reported  
Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.  
Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

**Number of Days to Update:** Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

## **STANDARD ENVIRONMENTAL RECORDS**

### ***Lists of Federal NPL (Superfund) sites***

#### **NPL: National Priority List**

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

#### **Proposed NPL: Proposed National Priority List Sites**

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 12/26/2023	Source: EPA
Date Data Arrived at EDR: 01/02/2024	Telephone: N/A
Date Made Active in Reports: 01/24/2024	Last EDR Contact: 03/01/2024
Number of Days to Update: 22	Next Scheduled EDR Contact: 04/08/2024
	Data Release Frequency: Quarterly

#### **NPL LIENS: Federal Superfund Liens**

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

## ***Lists of Federal Delisted NPL sites***

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 12/26/2023

## ***Lists of Federal sites subject to CERCLA removals and CERCLA orders***

FEDERAL FACILITY: Federal Facility Site Information listing

A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPA Federal Facilities Restoration and Reuse Office is involved in cleanup activities.

Date of Government Version: 12/20/2023

Data Release Frequency: Varies

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly known as CERCLIS, renamed to SEMs by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Data Release Frequency: Quarterly

## ***Lists of Federal CERCLA sites with NFRAP***

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

Date of Government Version: 01/29/2024	Source: EPA
Date Data Arrived at EDR: 02/01/2024	Telephone: 800-424-9346

## ***Lists of Federal RCRA facilities undergoing Corrective Action***

CORRACTS: Corrective Action Report

CORRACTS identifies hazardous waste handlers with RCRA corrective action activity.

Date of Government Version: 12/04/2023	Source: EPA
Date Data Arrived at EDR: 12/06/2023	Telephone: 800-424-9346
Date Made Active in Reports: 12/12/2023	Last EDR Contact: 03/19/2024
Number of Days to Update: 6	Next Scheduled EDR Contact: 07/01/2024
	Data Release Frequency: Quarterly

## ***Lists of Federal RCRA TSD facilities***

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Date of Government Version: 12/04/2023	Source: Environmental Protection Agency
Date Data Arrived at EDR: 12/06/2023	Telephone: (415) 495-8895
Date Made Active in Reports: 12/12/2023	Last EDR Contact: 03/19/2024
Number of Days to Update: 6	Next Scheduled EDR Contact: 07/01/2024

## ***Lists of Federal RCRA generators***

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

Date of Government Version: 12/04/2023	Source: Environmental Protection Agency
Date Data Arrived at EDR: 12/06/2023	Telephone: (415) 495-8895
Date Made Active in Reports: 12/12/2023	Last EDR Contact: 03/19/2024

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

## RCRA-SQG: RCRA - Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

Date of Government Version: 12/04/2023	Source: Environmental Protection Agency
Date Data Arrived at EDR: 12/06/2023	Telephone: (415) 495-8895
Date Made Active in Reports: 12/12/2023	Last EDR Contact: 03/19/2024
Number of Days to Update: 6	Next Scheduled EDR Contact: 07/01/2024
	Data Release Frequency: Quarterly

## RCRA-VSQG: RCRA - Very Small Quantity Generators (Formerly Conditionally Exempt Small Quantity Generators)

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

Date of Government Version: 12/04/2023	Source: Environmental Protection Agency
Date Data Arrived at EDR: 12/06/2023	Telephone: (415) 495-8895
Date Made Active in Reports: 12/12/2023	Last EDR Contact: 03/19/2024
Number of Days to Update: 6	Next Scheduled EDR Contact: 07/01/2024

## ***Federal institutional controls / engineering controls registries***

### LUCIS: Land Use Control Information System

LUCIS contains records of land use control information pertaining to the former Navy Base Realignment and Closure properties.

Date of Government Version: 08/03/2023	Source: Department of the Navy
Date Data Arrived at EDR: 08/07/2023	Telephone: 843-820-7326
Date Made Active in Reports: 10/10/2023	Last EDR Contact: 02/02/2024
Number of Days to Update: 64	Next Scheduled EDR Contact: 05/20/2024
	Data Release Frequency: Varies

### US ENG CONTROLS: Engineering Controls Sites List

A listing of sites with engineering controls in place. Engineering controls include various forms of caps, building foundations, liners, and treatment methods to create pathway elimination for regulated substances to enter environmental media or effect human health.

Date of Government Version: 10/26/2023	Source: Environmental Protection Agency
Date Data Arrived at EDR: 11/17/2023	Telephone: 703-603-0695
Date Made Active in Reports: 02/13/2024	Last EDR Contact: 02/21/2024
Number of Days to Update: 88	Next Scheduled EDR Contact: 06/03/2024
	Data Release Frequency: Varies

### US INST CONTROLS: Institutional Controls Sites List

A listing of sites with institutional controls in place. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls.

Date of Government Version: 10/26/2023	Source: Environmental Protection Agency
Date Data Arrived at EDR: 11/17/2023	Telephone: 703-603-0695
Date Made Active in Reports: 02/13/2024	Last EDR Contact: 02/21/2024
Number of Days to Update: 88	Next Scheduled EDR Contact: 06/03/2024
	Data Release Frequency: Varies

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

## ***Federal ERNS list***

ERNS: Emergency Response Notification System

Emergency Response Notification System. ERNS records and stores information on reported releases of oil and hazardous substances.

Date of Government Version: 12/12/2023

Source: National Response Center, United States Coast Guard

Date Data Arrived at EDR: 12/13/2023

Telephone: 202-267-2180

Date Made Active in Reports: 02/28/2024

Last EDR Contact: 03/19/2024

Number of Days to Update: 77

Next Scheduled EDR Contact: 07/01/2024

Data Release Frequency: Quarterly

## ***Lists of state- and tribal (Superfund) equivalent sites***

RESPONSE: State Response Sites

Identifies confirmed release sites where DTSC is involved in remediation, either in a lead or oversight capacity.

These confirmed release sites are generally high-priority and high potential risk.

Date of Government Version: 10/23/2023

Source: Department of Toxic Substances Control

Date Data Arrived at EDR: 10/24/2023

Telephone: 916-323-3400

Date Made Active in Reports: 01/11/2024

Last EDR Contact: 01/23/2024

Number of Days to Update: 79

Next Scheduled EDR Contact: 05/06/2024

Data Release Frequency: Quarterly

## ***Lists of state- and tribal hazardous waste facilities***

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

Date of Government Version: 10/23/2023

Source: Department of Toxic Substances Control

Date Data Arrived at EDR: 10/24/2023

Telephone: 916-323-3400

Number of Days to Update: 85	Next Scheduled EDR Contact: 07/01/2024
	Data Release Frequency: Quarterly

## **ADDITIONAL ENVIRONMENTAL RECORDS**

### ***Local Brownfield lists***

#### US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

Date of Government Version: 08/15/2023	Source: Environmental Protection Agency

Data Release Frequency: No Update Planned

## US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

	Data Release Frequency: Semi-Annually

### DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

Number of Days to Update: 50	Next Scheduled EDR Contact: N/A
	Data Release Frequency: No Update Planned

## **Other Ascertainable Records**

### RCRA NonGen / NLR: RCRA - Non Generators / No Longer Regulated

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

## EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

Date of Government Version: 08/30/2013	Source: Environmental Protection Agency
Date Data Arrived at EDR: 03/21/2014	Telephone: 617-520-3000

Number of Days to Update: 88	Next Scheduled EDR Contact: 05/13/2024
	Data Release Frequency: Quarterly

## 2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

Date of Government Version: 09/30/2017	Source: Environmental Protection Agency
Date Data Arrived at EDR: 05/08/2018	Telephone: 703-308-4044

Number of Days to Update: 22	Next Scheduled EDR Contact: 06/10/2024
	Data Release Frequency: Annually

## RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

Date of Government Version: 09/01/2023	Source: Environmental Protection Agency
Date Data Arrived at EDR: 09/27/2023	Telephone: 202-564-8600

## RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

Date of Government Version: 04/17/1995	Source: EPA
Date Data Arrived at EDR: 07/03/1995	Telephone: 202-564-4104

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

## ICIS: Integrated Compliance Information System

The Integrated Compliance Information System (ICIS) supports the information needs of the national enforcement and compliance program as well as the unique needs of the National Pollutant Discharge Elimination System (NPDES) program.

Date of Government Version: 11/18/2016	Source: Environmental Protection Agency
Date Data Arrived at EDR: 11/23/2016	Telephone: 202-564-2501
Date Made Active in Reports: 02/10/2017	Last EDR Contact: 12/26/2023
Number of Days to Update: 79	Next Scheduled EDR Contact: 04/15/2024
	Data Release Frequency: Quarterly

**FTTS: FIFRA/ TSCA Tracking System - FIFRA (Federal Insecticide, Fungicide, & Rodenticide Act)/TSCA (Toxic Substances Control Act)**  
FTTS tracks administrative cases and pesticide enforcement actions and compliance activities related to FIFRA, TSCA and EPCRA (Emergency Planning and Community Right-to-Know Act). To maintain currency, EDR contacts the Agency on a quarterly basis.

Date of Government Version: 04/09/2009	Source: EPA/Office of Prevention, Pesticides and Toxic Substances
Date Data Arrived at EDR: 04/16/2009	Telephone: 202-566-1667
Date Made Active in Reports: 05/11/2009	Last EDR Contact: 08/18/2017
Number of Days to Update: 25	Next Scheduled EDR Contact: 12/04/2017
	Data Release Frequency: No Update Planned

**FTTS INSP: FIFRA/ TSCA Tracking System - FIFRA (Federal Insecticide, Fungicide, & Rodenticide Act)/TSCA (Toxic Substances Control Act)**  
A listing of FIFRA/TSCA Tracking System (FTTS) inspections and enforcements.

Date of Government Version: 04/09/2009	Source: EPA
Date Data Arrived at EDR: 04/16/2009	Telephone: 202-566-1667

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

## PCB TRANSFORMER: PCB Transformer Registration Database

The database of PCB transformer registrations that includes all PCB registration submittals.

Date of Government Version: 09/13/2019	Source: Environmental Protection Agency
Date Data Arrived at EDR: 11/06/2019	Telephone: 202-566-0517
Date Made Active in Reports: 02/10/2020	Last EDR Contact: 02/02/2024
Number of Days to Update: 96	Next Scheduled EDR Contact: 05/13/2024
	Data Release Frequency: Varies

## RADINFO: Radiation Information Database

The Radiation Information Database (RADINFO) contains information about facilities that are regulated by U.S. Environmental Protection Agency (EPA) regulations for radiation and radioactivity.

Date of Government Version: 07/01/2019	Source: Environmental Protection Agency
Date Data Arrived at EDR: 07/01/2019	Telephone: 202-343-9775
Date Made Active in Reports: 09/23/2019	Last EDR Contact: 12/19/2023
Number of Days to Update: 84	Next Scheduled EDR Contact: 04/08/2024
	Data Release Frequency: Quarterly

## HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006	Source: Environmental Protection Agency
Date Data Arrived at EDR: 03/01/2007	Telephone: 202-564-2501
Date Made Active in Reports: 04/10/2007	Last EDR Contact: 12/17/2007
Number of Days to Update: 40	Next Scheduled EDR Contact: 03/17/2008
	Data Release Frequency: No Update Planned

## HIST FTTS INSP: FIFRA/TSCA Tracking System Inspection & Enforcement Case Listing

A complete inspection and enforcement case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Data Release Frequency: Varies

## UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

## US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

## ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

## GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

### PFAS TRIS: List of PFAS Added to the TRI

Section 7321 of the National Defense Authorization Act for Fiscal Year 2020 (NDAA) immediately added certain per- and polyfluoroalkyl substances (PFAS) to the list of chemicals covered by the Toxics Release Inventory (TRI) under Section 313 of the Emergency Planning and Community Right-to-Know Act (EPCRA) and provided a framework for additional PFAS to be added to TRI on an annual basis.

### PFAS RCRA MANIFEST: PFAS Transfers Identified In the RCRA Database Listing

To work around the lack of PFAS waste codes in the RCRA database, EPA developed the PFAS Transfers dataset by mining e-Manifest records containing at least one of these common PFAS keywords: PFAS, PFOA, PFOS, PERFL, AFFF, GENX, GEN-X (plus the VT waste codes). These keywords were searched for in the following text fields: Manifest handling instructions (MANIFEST\_HANDLING\_INSTR), Non-hazardous waste description (NON\_HAZ\_WASTE\_DESCRIPTION), DOT printed information (DOT\_PRINTED\_INFORMATION), Waste line handling instructions (WASTE\_LINE\_HANDLING\_INSTR), Waste residue comments (WASTE\_RESIDUE\_COMMENTS).

	Data Release Frequency: Varies

### PFAS NPDES: Clean Water Act Discharge Monitoring Information

Any discharger of pollutants to waters of the United States from a point source must have a National Pollutant Discharge Elimination System (NPDES) permit. The process for obtaining limits involves the regulated entity (permittee) disclosing releases in a NPDES permit application and the permitting authority (typically the state but sometimes EPA) deciding whether to require monitoring or monitoring with limits. Caveats and Limitations: Less than half of states have required PFAS monitoring for at least one of their permittees and fewer states have established PFAS effluent limits for permittees. New rulemakings have been initiated that may increase the number of facilities monitoring for PFAS in the future.

## PFAS ECHO: Facilities in Industries that May Be Handling PFAS Listing

Regulators and the public have expressed interest in knowing which regulated entities may be using PFAS. EPA has developed a dataset from various sources that show which industries may be handling PFAS. Approximately 120,000 facilities subject to federal environmental programs have operated or currently operate in industry sectors with processes that may involve handling and/or release of PFAS.

## PFAS ECHO FIRE TRAINING: Facilities in Industries that May Be Handling PFAS Listing

A list of fire training sites was added to the Industry Sectors dataset using a keyword search on the permitted facility's name to identify sites where fire-fighting foam may have been used in training exercises. Additionally, you may view an example spreadsheet of the subset of fire training facility data, as well as the keywords used in selecting or deselecting a facility for the subset. as well as the keywords used in selecting or deselecting a facility for the subset. These keywords were tested to maximize accuracy in selecting facilities that may use fire-fighting foam in training exercises, however, due to the lack of a required reporting field in the data systems for designating fire training sites, this methodology may not identify all fire training sites or may potentially misidentify them.

## PFAS PART 139 AIRPORT: All Certified Part 139 Airports PFAS Information Listing

Since July 1, 2006, all certified part 139 airports are required to have fire-fighting foam onsite that meet military specifications (MIL-F-24385) (14 CFR 139.317). To date, these military specification fire-fighting foams are fluorinated and have been historically used for training and extinguishing. The 2018 FAA Reauthorization Act has a provision stating that no later than October 2021, FAA shall not require the use of fluorinated AFFF. This provision does not prohibit the use of fluorinated AFFF at Part 139 civilian airports; it only prohibits FAA from mandating its use. The Federal Aviation Administration's document AC 150/5210-6D - Aircraft Fire Extinguishing Agents provides guidance on Aircraft Fire Extinguishing Agents, which includes Aqueous Film Forming Foam (AFFF).

## AQUEOUS FOAM NRC: Aqueous Foam Related Incidents Listing

The National Response Center (NRC) serves as an emergency call center that fields initial reports for pollution and railroad incidents and forwards that information to appropriate federal/state agencies for response. The spreadsheets posted to the NRC website contain initial incident data that has not been validated or investigated by a federal/state response agency. Response center calls from 1990 to the most recent complete calendar year where there was indication of Aqueous Film Forming Foam (AFFF) usage are included in this dataset. NRC calls may reference AFFF usage in the ?Material Involved? or ?Incident Description? fields.

## CHROME PLATING: Chrome Plating Facilities Listing

This listing represents chrome plating facilities the California State Water Resources Control Board staff identified as possibly being a source of Per- and polyfluoroalkyl substance (PFAS) contamination. Sites and locations were identified by staff with the Division of Water Quality in the California State Water Board. Data was collected from the CA Air Resources Board 2013 and 2018 - Cr VI emission survey, CA Emission Inventory, CA HAZ Waste discharge database and by reviewing storm water permits. Former chrome plating sites are also included that are open site investigation or remediation cases with the Regional Water Quality Control Boards and the Department of Toxic Substances Control.

Data Release Frequency: Varies

## HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

## WASTEWATER PITS: Oil Wastewater Pits Listing

Water officials discovered that oil producers have been dumping chemical-laden wastewater into hundreds of unlined pits that are operating without proper permits. Inspections completed by the Central Valley Regional Water Quality Control Board revealed the existence of previously unidentified waste sites. The water boards review found that more than one-third of the region's active disposal pits are operating without permission.

## WDR: Waste Discharge Requirements Listing

In general, the Waste Discharge Requirements (WDRs) Program (sometimes also referred to as the "Non Chapter 15 (Non 15) Program") regulates point discharges that are exempt pursuant to Subsection 20090 of Title 27 and not subject to the Federal Water Pollution Control Act. Exemptions from Title 27 may be granted for nine categories of discharges (e.g., sewage, wastewater, etc.) that meet, and continue to meet, the preconditions listed for each specific exemption. The scope of the WDRs Program also includes the discharge of wastes classified as inert, pursuant to section 20230 of Title 27.

	Data Release Frequency: Semi-Annually

## UST FINDER: UST Finder Database

EPA developed UST Finder, a web map application containing a comprehensive, state-sourced national map of underground storage tank (UST) and leaking UST (LUST) data. It provides the attributes and locations of active and closed USTs, UST facilities, and LUST sites from states and from Tribal lands and US territories. UST Finder contains information about proximity of UST facilities and LUST sites to: surface and groundwater public drinking water protection areas; estimated number of private domestic wells and number of people living nearby; and flooding and wildfires.

## EDR HIGH RISK HISTORICAL RECORDS

### *EDR Exclusive Records*

#### EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

#### EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

## OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Date of Government Version: 11/06/2023  
Date Data Arrived at EDR: 11/07/2023  
Date Made Active in Reports: 01/31/2024  
Number of Days to Update: 85

Source: Department of Energy & Environmental Protection  
Telephone: 860-424-3375  
Last EDR Contact: 02/06/2024  
Next Scheduled EDR Contact: 05/20/2024  
Data Release Frequency: No Update Planned

NJ MANIFEST: Manifest Information

Hazardous waste manifest information.

Date of Government Version: 12/31/2018  
Date Data Arrived at EDR: 04/10/2019

**Sensitive Receptors:** There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

## AHA Hospitals:

Source: American Hospital Association, Inc.  
Telephone: 312-280-5991

The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

## Medical Centers: Provider of Services Listing

Source: Centers for Medicare & Medicaid Services  
Telephone: 410-786-3000

A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

## Nursing Homes

Source: National Institutes of Health  
Telephone: 301-594-6248

## **GEOCHECK<sup>®</sup> - PHYSICAL SETTING SOURCE ADDENDUM**

### **TARGET PROPERTY ADDRESS**

THE VINEYARD  
VINEYARD AVENUE  
PLEASANTON, CA 94566

### **TARGET PROPERTY COORDINATES**

Latitude (North):	37.660135 - 37° 39' 36.49"
Longitude (West):	121.829588 - 121° 49' 46.52"
Universal Transverse Mercator:	Zone 10
UTM X (Meters):	603235.9
UTM Y (Meters):	4168546.8
Elevation:	408 ft. above sea level

### **USGS TOPOGRAPHIC MAP**

Target Property Map:	50003379 LIVERMORE, CA
Version Date:	2021

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

# GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

## GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

## TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

## TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General NE

## SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

# GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

## HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

## FEMA FLOOD ZONE

<u>Flood Plain Panel at Target Property</u>	<u>FEMA Source Type</u>

06001C0343G	FEMA FIRM Flood data

## NATIONAL WETLAND INVENTORY

<u>NWI Quad at Target Property</u>	<u>NWI Electronic Data Coverage</u>
LIVERMORE	YES - refer to the Overview Map and Detail Map

## HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

### ***Site-Specific Hydrogeological Data\*:***

Search Radius:	1.25 miles
Status:	Not found

## AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

<u>MAP ID</u>	<u>LOCATION FROM TP</u>	<u>GENERAL DIRECTION GROUNDWATER FLOW</u>

All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

## GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

### GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

### GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

# GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

## DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

### Soil Map ID: 1

Soil Component Name: Pleasanton

Soil Surface Texture: gravelly loam

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Moderate

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	20 inches	gravelly loam	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Clayey sand.	Max: 4 Min: 1.4	Max: 7.8 Min: 7.4
2	20 inches	64 inches	gravelly clay loam	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Clayey sand.	Max: 4 Min: 1.4	Max: 7.8 Min: 7.4
3	64 inches	72 inches	gravelly silt loam	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Clayey sand.	Max: 4 Min: 1.4	Max: 7.8 Min: 7.4

## GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

### Soil Map ID: 2

Soil Component Name: Yolo

Soil Surface Texture: loam

Hydrologic Group: Class A - High infiltration rates. Soils are deep, well drained to excessively drained sands and gravels.

Soil Drainage Class: Well drained

Hydric Status: Partially hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	16 inches	loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay	Max: 14 Min: 4	Max: 8.4 Min: 7.9
2	16 inches	59 inches	loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay	Max: 14 Min: 4	Max: 8.4 Min: 7.9

### Soil Map ID: 3

Soil Component Name: Positas

Soil Surface Texture: gravelly loam

Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class: Well drained

## GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	11 inches	gravelly loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Clayey sand.	Max: 1.4 Min: 0.42	Max: 7.8 Min: 7.4
2	11 inches	29 inches	clay	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Clayey sand.	Max: 1.4 Min: 0.42	Max: 7.8 Min: 7.4
3	29 inches	53 inches	clay loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Clayey sand.	Max: 1.4 Min: 0.42	Max: 7.8 Min: 7.4
4	53 inches	59 inches	gravelly sandy clay loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Clayey sand.	Max: 1.4 Min: 0.42	Max: 7.8 Min: 7.4

### Soil Map ID: 4

Soil Component Name: Perkins

Soil Surface Texture: loam

Hydrologic Group: Class C - Slow infiltration rates. Soils with layers impeding downward movement of water, or soils with moderately fine or fine textures.

Soil Drainage Class: Somewhat excessively drained

## GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Moderate

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	9 inches	loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Gravels, Gravels with fines, Clayey Gravel	Max: 14 Min: 4	Max: 7.8 Min: 7.4
2	9 inches	33 inches	gravelly clay loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Gravels, Gravels with fines, Clayey Gravel	Max: 14 Min: 4	Max: 7.8 Min: 7.4
3	33 inches	64 inches	stratified very gravelly sandy loam to very gravelly clay loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Gravels, Gravels with fines, Clayey Gravel	Max: 14 Min: 4	Max: 7.8 Min: 7.4

### Soil Map ID: 5

Soil Component Name: Gravel pit

Soil Surface Texture: extremely gravelly sand

Hydrologic Group: Class A - High infiltration rates. Soils are deep, well drained to excessively drained sands and gravels.

Soil Drainage Class:  
Hydric Status: Partially hydric

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

## GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	5 inches	extremely gravelly sand	Granular materials (35 pct. or less passing No. 200), Stone Fragments, Gravel and Sand.	Not reported	Max: Min:	Max: Min:
2	5 inches	59 inches	extremely gravelly sand	Granular materials (35 pct. or less passing No. 200), Stone Fragments, Gravel and Sand.	Not reported	Max: Min:	Max: Min:

**Soil Map ID: 6**

Soil Component Name: Water

Soil Surface Texture: extremely gravelly sand

Hydrologic Group: Class A - High infiltration rates. Soils are deep, well drained to excessively drained sands and gravels.

Soil Drainage Class:  
Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

No Layer Information available.

**LOCAL / REGIONAL WATER AGENCY RECORDS**

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

## TOPOGRAPHIC INFORMATION

### USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

### Current USGS 7.5 Minute Topographic Map

Source: U.S. Geological Survey

## HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.

Source: FEMA

Telephone: 877-336-2627

Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005, 2010 and 2015 from the U.S. Fish and Wildlife Service.

### State Wetlands Data: Wetland Inventory

Telephone: 916-445-0411

## HYDROGEOLOGIC INFORMATION

### AQUIFLOW<sup>R</sup> Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

## GEOLOGIC INFORMATION

### Geologic Age and Rock Stratigraphic Unit

Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

### STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

### SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

## LOCAL / REGIONAL WATER AGENCY RECORDS

### FEDERAL WATER WELLS

#### PWS: Public Water Systems

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

#### PWS ENF: Public Water Systems Violation and Enforcement Data

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

#### USGS Water Wells: USGS National Water Inventory System (NWIS)

This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

## OTHER STATE DATABASE INFORMATION

### Groundwater Ambient Monitoring & Assessment Program

State Water Resources Control Board

Telephone: 916-341-5577

The GAMA Program is California's comprehensive groundwater quality monitoring program. GAMA collects data by testing the untreated, raw water in different types of wells for naturally-occurring and man-made chemicals. The GAMA data includes Domestic, Monitoring and Municipal well types from the following sources, Department of Water Resources, Department of Health Services, EDF, Agricultural Lands, Lawrence Livermore National Laboratory, Department of Pesticide Regulation, United States Geological Survey, Groundwater Ambient Monitoring and Assessment Program and Local Groundwater Projects.

### Water Well Database

Source: Department of Water Resources

Telephone: 916-651-9648

### California Drinking Water Quality Database

Source: Department of Public Health

Telephone: 916-324-2319

The database includes all drinking water compliance and special studies monitoring for the state of California since 1984. It consists of over 3,200,000 individual analyses along with well and water system information.

### Geothermal Wells Listing

Department of Conservation

Telephone: 916-445-9686

Geothermal well means a well constructed to extract or return water to the ground after it has been used for heating or cooling purposes. Geothermal wells in California (except for wells on federal leases which are administered by the Bureau of Land Management) are permitted, drilled, operated, and permanently sealed and closed (plugged and abandoned) under requirements and procedures administered by the Geothermal Section of the Department of Conservation's Geologic Energy Management Division (CalGEM, formerly DOGGR).

### California Oil and Gas Well Locations

### PRELIMINARY REPORT

In response to the above referenced application for a policy of title insurance, this company hereby reports that it is prepared to issue, or cause to be issued, as of the date hereof, a Policy or Policies of Title Insurance describing the land and the estate or interest therein hereinafter set forth, insuring against loss which may be sustained by reason of any defect, lien or encumbrance not shown or referred to as an Exception below or not excluded from coverage pursuant to the printed Schedules, Conditions and Stipulations of said Policy forms.

The printed Exceptions and Exclusions from the coverage and Limitations on Covered Risks of said policy or policies are set forth in Exhibit A attached. *The policy to be issued may contain an arbitration clause. When the Amount of Insurance is less than that set forth in the arbitration clause, all arbitrable matters shall be arbitrated at the option of either the Company or the Insured as the exclusive remedy of the parties.* Limitations on Covered Risks applicable to the CLTA and ALTA Homeowner's Policies of Title Insurance which establish a Deductible Amount and a Maximum Dollar Limit of Liability for certain coverages are also set forth in Exhibit A. Copies of the policy forms should be read. They are available from the office which issued this report.

**Please read the exceptions shown or referred to below and the exceptions and exclusions set forth in Exhibit A of this report carefully. The exceptions and exclusions are meant to provide you with notice of matters which are not covered under the terms of the title insurance policy and should be carefully considered.**

**It is important to note that this preliminary report is not a written representation as to the condition of title and may not list all liens, defects, and encumbrances affecting title to the land.**

**Please be advised that any provision contained in this document, or in a document that is attached, linked or referenced in this document, that under applicable law illegally discriminates against a class of individuals based upon personal characteristics such as race, color, religion, sex, sexual orientation, gender identity, familial status, disability, national origin, or any other legally protected class, is illegal and unenforceable by law.**

This report (and any supplements or amendments hereto) is issued solely for the purpose of facilitating the issuance of a policy of title insurance and no liability is assumed hereby. If it is desired that liability be assumed prior to the issuance of a policy of title insurance, a Binder or Commitment should be requested.

Dated as of February 15, 2024 at 7:30 A.M.

The form of Policy of title insurance contemplated by this report is:

To Be Determined

A specific request should be made if another form or additional coverage is desired.

Title to said estate or interest at the date hereof is vested in:

PLEASANTON UNIFIED SCHOOL DISTRICT, A CALIFORNIA KINDERGARTEN THROUGH TWELFTH GRADE EDUCATIONAL INSTITUTION

The estate or interest in the land hereinafter described or referred to covered by this Report is:

Fee

The Land referred to herein is described as follows:

(See attached Legal Description)

At the date hereof exceptions to coverage in addition to the printed Exceptions and Exclusions in said policy form would be as follows:

1. General and special taxes and assessments for the fiscal year 2024-2025, a lien not yet due or payable.
2. General and special taxes and assessments for the fiscal year 2023-2024 are exempt.
3. The Land lies within the boundaries of proposed community facilities District No. 2014-1 (Clean Energy), as disclosed by a map filed August 24, 2015 in [Book 18, Page 65](#) of maps of assessment and community facilities districts, and recorded August 24, 2015 as Instrument No. [2015235594](#), Of Official Records.
4. The lien of supplemental taxes, if any, assessed pursuant to Chapter 3.5 commencing with Section 75 of the California Revenue and Taxation Code.
5. Any rights or easements, with incidents thereto, to subterranean water, and furnishing thereof, underlying the land described herein, which may have been created in accordance with the terms and provisions of that certain Agreement.

Dated: July 15, 1916

Executed By: Pleasanton Township County Water District, et al., and Spring Valley Water Company

Recorded: May 3, 1917, [Book 64, of Miscellaneous Records, Page 4](#)

Re-Recorded: January 26, 1918, [Book 64, of Miscellaneous Records, Page 387](#)

The location of the easement cannot be determined from record information.

6. An easement for subterranean water and spring facilities and incidental purposes, recorded March 03, 1930 as Book 2350, Page 1, Series No. [AA-13399](#), of Official Records.  
In Favor of: City and County of San Francisco.  
Affects: As described therein

The location of the easement cannot be determined from record information.

7. Rights of the public in and to that portion of the Land lying within any Road, Street, Alley or Highway.
8. Water rights, claims or title to water, whether or not shown by the Public Records.
9. Rights of parties in possession.
10. Any facts, rights, interests or claims which would be disclosed by a correct ALTA/NSPS survey.

**Prior to the issuance of any policy of title insurance, the Company will require:**

11. An ALTA/NSPS survey of recent date which complies with the current minimum standard detail requirements for ALTA/NSPS land title surveys.

**INFORMATIONAL NOTES**

Note: The policy to be issued may contain an arbitration clause. When the Amount of Insurance is less than the certain dollar amount set forth in any applicable arbitration clause, all arbitrable matters shall be arbitrated at the option of either the Company or the Insured as the exclusive remedy of the parties. If you desire to review the terms of the policy, including any arbitration clause that may be included, contact the office that issued this Commitment or Report to obtain a sample of the policy jacket for the policy that is to be issued in connection with your transaction.

1. The property covered by this report is vacant land.
2. According to the public records, there has been no conveyance of the land within a period of twenty-four months prior to the date of this report, except as follows:  
  
None
3. We find no outstanding voluntary liens of record affecting subject property. Disclosure should be made concerning the existence of any unrecorded lien or other indebtedness which could give rise to any possible security interest in the subject property.

The map attached, if any, may or may not be a survey of the land depicted hereon. First American expressly disclaims any liability for loss or damage which may result from reliance on this map except to the extent coverage for such loss or damage is expressly provided by the terms and provisions of the title insurance policy, if any, to which this map is attached.

## LEGAL DESCRIPTION

Real property in the City of Pleasanton, County of Alameda, State of California, described as follows:

Real property situated in the City of Pleasanton, County of Alameda, State of California, being a portion of the Parcel described in the Deed recorded in [92-293141](#), Alameda County Records, which real property is described as follows:

Beginning at the most Northerly corner of said Parcel; thence along the Northeasterly line of said Parcel, South 46° 30' 00" East, 598.76 feet; thence leaving said Northeasterly line, South 23° 30' 00" West, 1064.43 feet to the Southwesterly line of said Parcel; thence along said Southwesterly line, North 39° 15' 00" West, 627.33 feet; thence North 44° 56' 30" West, 5.31 feet to the most Southwesterly corner of said Parcel; thence leaving said Southwesterly line and along the Northwesterly line of said Parcel, North 23° 30' 00" East, 980.03 feet to the Point of Beginning.

Excepting therefrom, that portion of land as conveyed to the City of Pleasanton, a Municipal Corporation, by that certain Grant Deed recorded April 7, 2004, as Instrument No. [2004146924](#), Official Records.

Also excepting therefrom, that portion of land as conveyed to the City of Pleasanton, a Municipal Corporation, by that certain Grant Deed recorded April 7, 2004, as Instrument No. [2004146925](#), Official Records.

Also excepting therefrom, that portion of land as conveyed to the City of Pleasanton, a Municipal Corporation, by that certain Grant Deed recorded April 7, 2004, as Instrument No. [2004146928](#), Official Records.

***NOTICE***

Section 12413.1 of the California Insurance Code, effective January 1, 1990, requires that any title insurance company, underwritten title company, or controlled escrow company handling funds in an escrow or sub-escrow capacity, wait a specified number of days after depositing funds, before recording any documents in connection with the transaction or disbursing funds. This statute allows for funds deposited by wire transfer to be disbursed the same day as deposit. In the case of cashier's checks or certified checks, funds may be disbursed the next day after deposit. In order to avoid unnecessary delays of three to seven days, or more, please use wire transfer, cashier's checks, or certified checks whenever possible.

**EXHIBIT A**  
**LIST OF PRINTED EXCEPTIONS AND EXCLUSIONS (BY POLICY TYPE)**  
**CLTA/ALTA HOMEOWNER'S POLICY OF TITLE INSURANCE [(07-01-2021) v. 01.00]**  
**EXCLUSIONS FROM COVERAGE**

The following matters are excluded from the coverage of this policy and We will not pay loss or damage, costs, attorneys' fees, or expenses that arise by reason of:

1. a. any law, ordinance, permit, or governmental regulation (including those relating to building and zoning) that restricts, regulates, prohibits, or relates to:
  - i. the occupancy, use, or enjoyment of the Land;
  - ii. the character, dimensions, or location of any improvement on the Land;
  - iii. the subdivision of land; or
  - iv. environmental remediation or protection.
- b. any governmental forfeiture, police, or regulatory, or national security power.
- c. the effect of a violation or enforcement of any matter excluded under Exclusion 1.a. or 1.b.  
Exclusion 1 does not modify or limit the coverage provided under Covered Risk 8.a., 14, 15, 16, 18, 19, 20, 23, or 27.
2. Any power to take the Land by condemnation. Exclusion 2 does not modify or limit the coverage provided under Covered Risk 17.
3. Any defect, lien, encumbrance, adverse claim, or other matter:
  - a. created, suffered, assumed, or agreed to by You;
  - b. not Known to Us, not recorded in the Public Records at the Date of Policy, but Known to You and not disclosed in writing to Us by You prior to the date You became an Insured under this policy;
  - c. resulting in no loss or damage to You;
  - d. attaching or created subsequent to the Date of Policy (Exclusion 3.d. does not modify or limit the coverage provided under Covered Risk 5, 8.f., 25, 26, 27, 28, or 32); or
  - e. resulting in loss or damage that would not have been sustained if You paid consideration sufficient to qualify You as a bona fide purchaser of the Title at the Date of Policy.
4. Lack of a right:
  - a. to any land outside the area specifically described and referred to in Item 3 of Schedule A; and
  - b. in any street, road, avenue, alley, lane, right-of-way, body of water, or waterway that abut the Land.  
Exclusion 4 does not modify or limit the coverage provided under Covered Risk 11 or 21.
5. The failure of Your existing structures, or any portion of Your existing structures, to have been constructed before, on, or after the Date of Policy in accordance with applicable building codes. Exclusion 5 does not modify or limit the coverage provided under Covered Risk 14 or 15.
6. Any claim, by reason of the operation of federal bankruptcy, state insolvency, or similar creditors' rights law, that the transfer of the Title to You is a:
  - a. fraudulent conveyance or fraudulent transfer;
  - b. voidable transfer under the Uniform Voidable Transactions Act; or
  - c. preferential transfer:
    - i. to the extent the instrument of transfer vesting the Title as shown in Schedule A is not a transfer made as a contemporaneous exchange for new value; or
    - ii. for any other reason not stated in Covered Risk 30.
7. Contamination, explosion, fire, flooding, vibration, fracturing, earthquake, or subsidence.
8. Negligence by a person or an entity exercising a right to extract or develop oil, gas, minerals, groundwater, or any other subsurface substance.
9. Any lien on Your Title for real estate taxes or assessments imposed or collected by a governmental authority that becomes due and payable after the Date of Policy. Exclusion 9 does not modify or limit the coverage provided under Covered Risk 8.a. or 27.
10. Any discrepancy in the quantity of the area, square footage, or acreage of the Land or of any improvement to the Land.

**LIMITATIONS ON COVERED RISKS**

Your insurance for the following Covered Risks is limited on the Owner's Coverage Statement as follows:  
For Covered Risk 16, 18, 19, and 21 Your Deductible Amount and Our Maximum Dollar Limit of Liability shown in Schedule A.  
The deductible amounts and maximum dollar limits shown on Schedule A are as follows:

	<u>Your Deductible Amount</u>	<u>Our Maximum Dollar Limit of Liability</u>
Covered Risk 16:	1% of Policy Amount Shown in Schedule A or \$2,500 (whichever is less)	\$10,000
Covered Risk 18:	1% of Policy Amount Shown in Schedule A or \$5,000 (whichever is less)	\$25,000
Covered Risk 19:	1% of Policy Amount Shown on Schedule A or \$5,000 (whichever is less)	\$25,000
Covered Risk 21:	1% of Policy Amount Shown on Schedule A or \$2,500 (whichever is less)	\$5,000

**ALTA OWNER'S POLICY [(07-01-2021) V. 01.00]**  
**CLTA STANDARD COVERAGE OWNER'S POLICY [(02-04-22) V. 01.00]**  
EXCLUSIONS FROM COVERAGE

The following matters are excluded from the coverage of this policy, and the Company will not pay loss or damage, costs, attorneys' fees, or expenses that arise by reason of:

1. a. any law, ordinance, permit, or governmental regulation (including those relating to building and zoning) that restricts, regulates, prohibits, or relates to:
    - i. the occupancy, use, or enjoyment of the Land;
    - ii. the character, dimensions, or location of any improvement on the Land;
    - iii. the subdivision of land; or
    - iv. environmental remediation or protection.
  - b. any governmental forfeiture, police, regulatory, or national security power.
  - c. the effect of a violation or enforcement of any matter excluded under Exclusion 1.a. or 1.b.
- Exclusion 1 does not modify or limit the coverage provided under Covered Risk 5 or 6.
2. Any power of eminent domain. Exclusion 2 does not modify or limit the coverage provided under Covered Risk 7.
  3. Any defect, lien, encumbrance, adverse claim, or other matter:
    - a. created, suffered, assumed, or agreed to by the Insured Claimant;
    - b. not Known to the Company, not recorded in the Public Records at the Date of Policy, but Known to the Insured Claimant and not disclosed in writing to the Company by the Insured Claimant prior to the date the Insured Claimant became an Insured under this policy;
    - c. resulting in no loss or damage to the Insured Claimant;
    - d. attaching or created subsequent to the Date of Policy (Exclusion 3.d. does not modify or limit the coverage provided under Covered Risk 9 or 10); or
    - e. resulting in loss or damage that would not have been sustained if consideration sufficient to qualify the Insured named in Schedule A as a bona fide purchaser had been given for the Title at the Date of Policy.
  4. Any claim, by reason of the operation of federal bankruptcy, state insolvency, or similar creditors' rights law, that the transaction vesting the Title as shown in Schedule A is a:
    - a. fraudulent conveyance or fraudulent transfer;
    - b. voidable transfer under the Uniform Voidable Transactions Act; or
    - c. preferential transfer:
      - i. to the extent the instrument of transfer vesting the Title as shown in Schedule A is not a transfer made as a contemporaneous exchange for new value; or
      - ii. for any other reason not stated in Covered Risk 9.b.
  5. Any claim of a PACA-PSA Trust. Exclusion 5 does not modify or limit the coverage provided under Covered Risk 8.
  6. Any lien on the Title for real estate taxes or assessments imposed or collected by a governmental authority that becomes due and payable after the Date of Policy. Exclusion 6 does not modify or limit the coverage provided under Covered Risk 2.b.
  7. Any discrepancy in the quantity of the area, square footage, or acreage of the Land or of any improvement to the Land.

NOTE: The 2021 ALTA Owner's Policy may be issued to afford either Standard Coverage or Extended Coverage. In addition to variable exceptions such as taxes, easements, CC&R's, etc., the Exceptions from Coverage in a Standard Coverage policy will also include the Western Regional Standard Coverage Exceptions listed below as numbers 1 through 7. The 2021 CLTA Standard Coverage Owner's Policy will include the Western Regional Standard Coverage Exceptions listed below as numbers 1 through 7.

EXCEPTIONS FROM COVERAGE

Some historical land records contain Discriminatory Covenants that are illegal and unenforceable by law. This policy treats any Discriminatory Covenant in a document referenced in Schedule B as if each Discriminatory Covenant is redacted, repudiated, removed, and not republished or recirculated. Only the remaining provisions of the document are excepted from coverage.

This policy does not insure against loss or damage and the Company will not pay costs, attorneys' fees, or expenses resulting from the terms and conditions of any lease or easement identified in Schedule A, and the following matters:

1. (a) Taxes or assessments that are not shown as existing liens by the records of any taxing authority that levies taxes or assessments on real property or by the Public Records; (b) proceedings by a public agency that may result in taxes or assessments, or notices of such proceedings, whether or not shown by the records of such agency or by the Public Records.
2. Any facts, rights, interests, or claims that are not shown by the Public Records but that could be ascertained by an inspection of the Land or that may be asserted by persons in possession of the Land.
3. Easements, liens or encumbrances, or claims thereof, not shown by the Public Records.
4. Any encroachment, encumbrance, violation, variation, or adverse circumstance affecting the Title that would be disclosed by an accurate and complete land survey of the Land and not shown by the Public Records.
5. (a) Unpatented mining claims; (b) reservations or exceptions in patents or in Acts authorizing the issuance thereof; (c) water rights, claims or title to water, whether or not the matters excepted under (a), (b), or (c) are shown by the Public Records.
6. Any lien or right to a lien for services, labor or material unless such lien is shown by the Public Records at Date of Policy.
7. Any claim to (a) ownership of or rights to minerals and similar substances, including but not limited to ores, metals, coal, lignite, oil, gas,

uranium, clay, rock, sand, and gravel located in, on, or under the Land or produced from the Land, whether such ownership or rights arise by lease, grant, exception, conveyance, reservation, or otherwise; and (b) any rights, privileges, immunities, rights of way, and easements associated therewith or appurtenant thereto, whether or not the interests or rights excepted in (a) or (b) appear in the Public Records or are shown in Schedule B.

**2006 ALTA OWNER'S POLICY (06-17-06)**  
EXCLUSIONS FROM COVERAGE

The following matters are expressly excluded from the coverage of this policy, and the Company will not pay loss or damage, costs, attorneys' fees, or expenses that arise by reason of:

1. (a) Any law, ordinance, permit, or governmental regulation (including those relating to building and zoning) restricting, regulating, prohibiting, or relating to
  - (i) the occupancy, use, or enjoyment of the Land;
  - (ii) the character, dimensions, or location of any improvement erected on the Land;
  - (iii) the subdivision of land; or
  - (iv) environmental protection;or the effect of any violation of these laws, ordinances, or governmental regulations. This Exclusion 1(a) does not modify or limit the coverage provided under Covered Risk 5.
  - (b) Any governmental police power. This Exclusion 1(b) does not modify or limit the coverage provided under Covered Risk 6.
2. Rights of eminent domain. This Exclusion does not modify or limit the coverage provided under Covered Risk 7 or 8.
3. Defects, liens, encumbrances, adverse claims, or other matters
  - (a) created, suffered, assumed, or agreed to by the Insured Claimant;
  - (b) not Known to the Company, not recorded in the Public Records at Date of Policy, but Known to the Insured Claimant and not disclosed in writing to the Company by the Insured Claimant prior to the date the Insured Claimant became an Insured under this policy;
  - (c) resulting in no loss or damage to the Insured Claimant;
  - (d) attaching or created subsequent to Date of Policy (however, this does not modify or limit the coverage provided under Covered Risk 9 and 10); or
  - (e) resulting in loss or damage that would not have been sustained if the Insured Claimant had paid value for the Title.
4. Any claim, by reason of the operation of federal bankruptcy, state insolvency, or similar creditors' rights laws, that the transaction vesting the Title as shown in Schedule A, is
  - (a) a fraudulent conveyance or fraudulent transfer; or
  - (b) a preferential transfer for any reason not stated in Covered Risk 9 of this policy.
5. Any lien on the Title for real estate taxes or assessments imposed by governmental authority and created or attaching between Date of Policy and the date of recording of the deed or other instrument of transfer in the Public Records that vests Title as shown in Schedule A.

NOTE: The 2006 ALTA Owner's Policy may be issued to afford either Standard Coverage or Extended Coverage. In addition to variable exceptions such as taxes, easements, CC&R's, etc., the Exceptions from Coverage in a Standard Coverage policy will also include the Western Regional Standard Coverage Exceptions listed below as numbers 1 through 7.

EXCEPTIONS FROM COVERAGE

This policy does not insure against loss or damage, and the Company will not pay costs, attorneys' fees or expenses, that arise by reason of:

The above policy form may be issued to afford either Standard Coverage or Extended Coverage. In addition to the above Exclusions from Coverage, the Exceptions from Coverage in a Standard Coverage policy will also include the following Exceptions from Coverage:

1. (a) Taxes or assessments that are not shown as existing liens by the records of any taxing authority that levies taxes or assessments on real property or by the Public Records; (b) proceedings by a public agency that may result in taxes or assessments, or notices of such proceedings, whether or not shown by the records of such agency or by the Public Records.
2. Any facts, rights, interests, or claims that are not shown by the Public Records at Date of Policy but that could be (a) ascertained by an inspection of the Land, or (b) asserted by persons or parties in possession of the Land.
3. Easements, liens or encumbrances, or claims thereof, not shown by the Public Records at Date of Policy.
4. Any encroachment, encumbrance, violation, variation, easement, or adverse circumstance affecting the Title that would be disclosed by an accurate and complete land survey of the Land and not shown by the Public Records at Date of Policy.
5. (a) Unpatented mining claims; (b) reservations or exceptions in patents or in Acts authorizing the issuance thereof; (c) water rights, claims or title to water, whether or not the matters excepted under (a), (b), or (c) are shown by the Public Records.
6. Any lien or right to a lien for services, labor, material or equipment unless such lien is shown by the Public Records at Date of Policy.
7. Any claim to (a) ownership of or rights to minerals and similar substances, including but not limited to ores, metals, coal, lignite, oil, gas, uranium, clay, rock, sand, and gravel located in, on, or under the Land or produced from the Land, whether such ownership or rights arise by lease, grant, exception, conveyance, reservation, or otherwise; and (b) any rights, privileges, immunities, rights of way, and easements associated therewith or appurtenant thereto, whether or not the interests or rights excepted in (a) or (b) appear in the Public Records or are shown in Schedule B.

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Engeo Inc. were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting [www.edrnet.com/sanborn](http://www.edrnet.com/sanborn).

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

## EXECUTIVE SUMMARY

### DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Report is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Report includes a search of available business directory data at approximately five year intervals.

### RECORD SOURCES

The EDR City Directory Report accesses a variety of business directory sources, including Haines, InfoUSA, Polk, Cole, Bresser, and Stewart. Listings marked as EDR Digital Archive access Cole and InfoUSA records. The various directory sources enhance and complement each other to provide a more thorough and accurate report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer.

### RESEARCH SUMMARY

The following research sources were consulted in the preparation of this report. A check mark indicates where information was identified in the source and provided in this report.

## **APPENDIX G**

### **ENVIRONMENTAL SITE ASSESSMENT QUESTIONNAIRE**

Project Name: The Vineyard, Pleasanton

Project No. P24773.002.001

**ENVIRONMENTAL SITE ASSESSMENT QUESTIONNAIRE  
FOR CLIENT**

To evaluate the potential for possible environmentally related impacts and site contamination the following information is requested. This questionnaire is to be completed by the user of the phase one environmental site assessment, or their authorized representative.

**PART I**

1. Property address and Assessor's Parcel Number (APN):

2000 Vineyard Avenue, Pleasanton, CA (APN) 946-4619-1.

2. Current property owner (name, address, voice/fax number):

Pleasanton Unified School District  
5758 W. Las Positas Blvd.,  
Pleasanton, CA 94588  
(925) 462-5500

3. Date current property owner assumed title of property:

Unknown

4. Current property development/improvements:

None - Vacant Land

5. Past property use, development/improvements:

Possible Orchard - site is vacant land

6. Neighboring property uses:

Single Family Residential

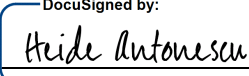

**PART II**

1. Are you aware of any environmental cleanup liens against the *property* that are filed under federal, tribal, local or state law?  Yes  No
2. Are you aware of any activity and land use limitations, such as engineering controls, land use restrictions, or institutional controls that are in place at the property and/or have been filed or recorded in a registry under federal, tribal, state or local law?  Yes  No
3. Do you have any specialized knowledge or experience related to the *property* or nearby properties? For example, are you involved in the same line of business as the current or former occupants of the *property* or an adjoining property so that you would have specialized knowledge of the chemicals and processes used by this type of business?  Yes  No
4. If a property transaction is occurring in conjunction with this environmental assessment, does the purchase price of this *property* reasonably reflect the fair market value of the *property*?  Yes  No  N/A
5. If you conclude that there is a difference, have you considered whether the lower purchase price is because contamination is known or believed to be present at the *property*?  Yes  No  N/A
6. Are you aware of any commonly known or reasonably ascertainable information about the property that would help the environmental professional to identify conditions indicative of releases or threatened releases? For example,
- (a) do you know of specific chemicals that are present or once were present at the *property*?  Yes  No
- (b) do you know of spills or other chemical releases that have taken place at the *property*?
- (c) do you know of any environmental cleanups that have taken place at the *property*?
7. Based on your knowledge and experience related to the *property* are there any obvious indicators that point to the presence or likely presence of contamination at the *property*?  Yes  No

If a "Yes" response was provided to any of the above questions, please provide details below:

I certify that the information herein is true and correct to the best of my knowledge as of the date signed below.

Name (Printed/Typed): Heide Antonescu

Signature:    
DocuSigned by:  
84DA8B65E00B463...

Date: June 5, 2024

### **QUALIFICATIONS OF ENVIRONMENTAL PROFESSIONAL**

## JEFFREY ADAMS, PHD, PE

Principal

### EDUCATION

BS Civil Engineering University of Illinois at Chicago 1994  
MS Civil Engineering University of Illinois at Chicago 1996  
PhD Civil Engineering University of Illinois at Chicago 1999  
MBA University of Washington 2004

### EXPERIENCE

Years with ENGEO: 22  
Years with Other Firms: 0

### REGISTRATIONS & CERTIFICATIONS

Environmental Manager, NV 2150  
Professional Engineer, CA 69633  
Envision ENV SP Credentialed

### SPECIALIZATIONS

- Environmental Assessments, Characterization, and Remediation
- Green and Sustainable Remediation (GSR)
- Resilient and Sustainable Infrastructure
- Geologic Hazard Abatement Districts (GHADs)

### AFFILIATIONS

ASCE American Society of Civil Engineers  
ASCE Geo-Institute  
GRA - Groundwater Resource Association

Jeff joined ENGEO in 1999. He leads environmental assessment, characterization, remediation projects, and Geologic Hazard Abatement District (GHAD) formation. He has contributed to a wide range of remediation and development projects in high-density and low-density urban and suburban settings redeveloped for a variety of uses.

Jeff's research interests include green and sustainable remediation (GSR), resilient and sustainable infrastructure solutions, environmental applications, and emerging public/private financial mechanisms to mitigate flood-related losses. He has authored and co-authored numerous environmental remediation-related textbooks, instructional materials, and research papers that have been presented worldwide and published in a diverse group of academic and professional journals.

### SELECT PROJECT EXPERIENCE

#### Howard Terminal—Oakland, CA

*Lead Environmental Principal.* Jeff has provided ongoing technical leadership during several environmental studies for the redevelopment of the Howard Terminal site. The approximately 62.1-acre Property is a former container terminal along the Port of Oakland's Inner Harbor. The Property was originally a bulk-break terminal dating back to the early 1900s, with a manufactured gas plant located in the eastern portion of the Property. The terminal was expanded and converted to a container terminal in the 1980s. Improvements will include a Major League Baseball stadium as well as mid-rise and high-rise buildings to provide a mix of residential, retail, and other commercial uses. ENGEO performed a Phase I Environmental Site Assessment (ESA), Phase II ESAs consisting of soil, soil gas, and groundwater sampling across the property, EIR preparation support, the preparation of a human health and ecological risk assessment (HHERA), and is developing a removal action work plan (RAW).

#### Google San Jose Downtown West—San Jose, CA

*Project Manager.* Jeff provided technical leadership and review for a comprehensive ESA for various industrial and commercial properties over approximately 50 acres in downtown San Jose considered for acquisition by Google. The purpose of the assessment was to identify known and unknown environmental concerns and recommended appropriate actions to quantify potential risks to inform due diligence efforts. The risk assessment utilized an innovative

Geographic Information System (GIS) digital interactive platform that provides additional data beyond typical environmental information and is scalable for future project plans.

### **The South Lathrop Commerce Center—Tracy, CA**

*Lead Environmental Principal.* Jeff provided technical leadership and review for a Phase I ESA for the approximately 245-acre master-planned industrial development. The 4.2-million-square-foot development includes nine tilt-up concrete buildings, ranging in size from 282,000 square feet to over 1,000,000 square feet. Additional improvements for the logistics center include detention and retention basins, paved streets, parking, and drive lanes, a stormwater pump station and outfall, and a sewer lift station. Site development activities include grading operations, primarily consisting of minor cuts and fills, for individual pads and roadways, underground utility installation, pump station and outfall structure construction, flexible and rigid pavement construction, and vertical construction.

### **Crown Chevrolet Property—Dublin, CA**

*Project Manager.* Jeff provided comprehensive environmental consultation services for the project. Working on behalf of the purchaser, Jeff collaborated with a multi-firm consulting team to characterize and mitigate environmental impacts resulting from previous on-site automotive maintenance activities and off-site businesses. Jeff designed and managed a site characterization program that definitively demonstrated that groundwater and soil gas impacts at the site were the result of off-site releases. He peer reviewed the design and implementation of a permeable reactive barrier (PRB), which serves to remediate an encroaching groundwater plume, as well as vapor intrusion mitigation systems for the site. He also completed a Phase I ESA for a remnant parcel subsequently developed for housing for veterans. The site consists of a multi-story commercial and residential apartment/condominium “transit village” complex.

### **3512 Clayton Road—Concord, CA**

*Lead Environmental Principal.* Jeff provided technical leadership and review for a Brownfields redevelopment project in Concord. Following the Phase I and Phase II ESAs that identified soil and soil gas impacts, he assisted in the development of a remediation program that included a comprehensive pre-characterization program, accurately delineating soil impacts from past light-industrial uses and soil gas impacts from off-site businesses, allowing for accelerated field implementation. Following active soil remediation and post-remediation soil gas sampling, Jeff and the ENGEO team performed a vapor intrusion risk assessment that confirmed the site did not require long-term vapor mitigation systems. The site was granted case closure from the oversight regulatory agency within an accelerated review and approval timeframe. The project consists of a high-density residential development.

### **Blacow Road Project—Fremont, CA**

*Environmental Principal.* Jeff has provided technical assistance for project remediation activities and prepared a Phase I ESA for site. The site is an active, open remediation site under the regulatory oversight of the San Francisco Bay Regional Water Quality Control Board (RWQCB). Impacts resulted from a variety of on-site and off-site commercial and industrial land uses dating back over 50 years. ENGEO has performed numerous characterization, remediation design, and monitoring services for the Site. Remediation activities are underway at the site to address groundwater and soil gas impacts from volatile organic compounds (VOCs) and petroleum hydrocarbons. The remediation approach consists of several remedial and mitigative technologies, including soil vapor extraction (SVE), in-situ enhanced bioremediation, and post-remediation vapor intrusion mitigation systems to be installed in future residential structures. The project consists of a residential development.

**Eastvale 79—Eastvale, CA**

*Environmental Principal.* Jeff served in an Environmental Principal role for environmental studies at the site. ENGEO performed a Phase I ESA and a subsequent ESA update that included regulatory file reviews, interviews with property owners and regulatory agencies, a site reconnaissance, and preparation of a report documenting our findings. The approximately 16-acre site was historically associated with a portion of a dairy dating to at least 1967. During grading activities, a localized area of stained and odoriferous soil was observed in the southeast corner of the site. ENGEO coordinated and managed remediation efforts, confirmation sampling, and coordination with Riverside County DEH. Approximately 4,115 tons petroleum-impacted soil were removed and disposed. The DEH issued “No Further Action” status for the site.

**Alameda Landing—Alameda, CA**

*Project Manager. Project Manager, Lead Environmental Principal.* Jeff has provided comprehensive environmental consultation services for the Alameda Landing project. He has prepared and managed the completion of Phase I ESA and ESA Update studies for subunits of the greater project area. He directed environmental characterization operations for the site, which was suspected of having been affected by naturally occurring methane deposits within the subsurface. Working closely with innovative protocols, Jeff was able to demonstrate to regulatory oversight officials that expensive vapor intrusion mitigation systems were not necessary for proposed residential structures, potentially saving millions of dollars to the site developer. Additionally, he has prepared several Remedial Action Completion Reports (RACRs) of development phases to achieve regulatory case closure. The project consists of a multi-phased residential housing community built as part of a master-planned redevelopment of a former United States Navy facility.

**VTA BART Silicon Valley Berryessa Extension Design-Build Project—San Jose, CA**

*Project Manager.* As the lead project team member with respect to hazardous materials, Jeff provided a range of value engineering consulting services relating to existing soils, groundwater, and building materials. ENGEO provided a range of value engineering consulting services to address existing soils, hydrology resources, SWPPP, and building materials.

Following a complex right-of-way that extended through numerous developed areas and paralleled an existing rail line, the project generated hundreds of thousands of cubic yards of excavated soil with potential toxic and hazard concerns. The right-of-way intersected several groundwater plumes emanating from former industrial and commercial sources. Further, a number of structures in the project footprint harbored lead-based paint and asbestos-containing building materials. ENGEO led the effort to accurately quantify these materials and devise strategies to effectively manage and mitigate these materials to drive overall project cost savings.

**Foster City Civic Center Lots—Foster City, CA**

*Assistant Project Manager.* Jeff provided technical oversight for a Phase I ESA for the Foster City Civic Center site and environmental characterization operations for the site, which was suspected of having been affected by unauthorized petroleum hydrocarbon releases within the subsurface. Following the completion of a soil gas survey, Jeff and team demonstrated that vapor intrusion mitigation systems were not necessary for proposed development, providing a significant cost savings to the project. The project consists of a multi-use urban infill development.

**Macedo Property Environmental Consultation—Livermore, CA**

*Project Manager.* Jeff provided comprehensive environmental consultation services for a Brownfields redevelopment project in Livermore. The project included several challenges, including ongoing business activities at the site and complex contaminant conditions resulting

from a long history of site operation of an automotive service station. Following a comprehensive site characterization plan that he developed, Jeff developed a cost-effective remedial plan to address hydrocarbon-contaminated soil. Jeff worked closely with the design team to rapidly remediate the site contamination using a soil excavation program that minimized disturbance to the active businesses at the site. Through Jeff's project oversight, the characterization and remediation activities were completed on time and under budget. Because of his effective work with various project stakeholders, the site was granted case closure from the oversight regulatory agency within an accelerated timeframe, allowing redevelopment to occur on schedule. The project consists of a residential subdivision. The project consists of a residential subdivision.

#### **1511 Jefferson—Oakland, CA**

*Project Manager.* Jeff provided environmental and geotechnical consultation services for a Brownfields redevelopment project in downtown Oakland. The project included several challenges, including limited site access due to on-site business activities, environmental impact related to previous site use, and the presence of several adjacent mid-rise structures. Jeff developed efficient remedial value engineering solutions to mitigate the presence of geotechnical and environmental development constraints. Jeff worked with the design team to establish cost-effective retaining wall and foundation systems, designed and observed a subsurface environmental mitigation program, and assisted in the design of a structure-wide vapor barrier. The project, serving as a cornerstone of the revitalization of downtown Oakland, consists of a multi-story residential condominium structure.

#### **Alamo Creek—Danville, CA**

*Project Manager.* Jeff prepared guidance documents and helped to form a transit-focused County Service Area (CSA). The transit-focused CSA, believed to be the first in Contra Costa County, helped to establish commuter transit service for a recently constructed residential development. Utilizing market analysis research provided by other consultants, he prepared an Engineer's Report that outlined a three-part phased implementation of transit, beginning with vanpools and ultimately resulting in an airporter-style fleet of bus service to and from an existing Bay Area Rapid Transit station. Jeff also prepared a long-range budget and confirmed a yearly assessment to ensure financial solvency of the CSA over the lifetime of the development. The CSA serves the Alamo Creek development and vicinity in Contra Costa County, California.

#### **Alcosta Boulevard/Interstate 680 Interchange Project—San Ramon, CA**

*Project Engineer.* Jeff performed an Aerially Deposited Lead (ADL) assessment program for the Alcosta Boulevard/Interstate 680 Interchange Improvement. The purpose of the investigation was to determine existing lead levels in surface soils. The scope of services included the recovery of soil samples from the surface to a depth of 3 feet below the ground surface, analytical testing of the samples to determine hydrogen ion content (pH testing), total lead, STLC WET soluble lead, and STLC TCLP soluble lead analyses, and a statistical analysis to determine Confidence Intervals (CI) of soil lead concentrations. An innovative, risk-based statistical analysis was performed to assure site soils were suitable for on-site reuse in accordance with Caltrans/State of California regulations. The project consists of a rehabilitation and realignment of the interstate highway interchange.

#### **Arroyo Crossing—Livermore, CA**

*Project Engineer.* Jeff contributed to the award-winning project, which included an extensive scope of work, including supplemental geotechnical exploration, Phase I and II ESAs, underground storage tank removal and groundwater monitoring. Jeff provided environmental analysis of existing subsurface conditions, helping the design team to implement a comprehensive yet innovative geotechnical and environmental mitigation program. Following

completion of environmental remediation activities, Jeff was able to secure a substantial federal corporate income tax rebate on behalf of the client through the EPA's Brownfields Tax Incentive program. The project consists of a residential subdivision re-use of a former quarry.

**Brookside - Guadalupe Mines Road—San Jose, CA**

*Senior Engineer.* Jeff performed a review of existing environmental documents by others, consultation with the client, and peer review document preparation. This 16-acre commercial property is planned for redevelopment into a roughly 95-lot single-family residential development. Site challenges include pre-existing environmental impacts, existing fills, creek bank stability/meander, and faulting.

**East Garrison Development - Operations and Maintenance Plan—Carmel, CA**

*Project Engineer.* Jeff prepared an Operations and Maintenance Plan (OMP) that included an assemblage of projected capital and maintenance costs from a range of consultants into working 50-year budgets for both a County Service District (CSD) and a homeowner's association (HOA). He worked to reach agreement with a number of project stakeholders, including the developer, other consultants, and local government agencies. In addition to assisting in the preparation of capital expenditure projections, Jeff developed the two operating and maintenance budgets, maintenance activity schedules and checklists, and the governing document for the two maintenance entities. The project consists of a redevelopment from a former military facility to a residential subdivision.

**Highlands Ranch, Unit 3 - Environmental T&O—Pittsburg, CA**

*Project Engineer.* Jeff managed the remediation of a former petroleum tank farm located in a rural/exurban setting. The extensive remediation program was in support of a conversion of industrial site usage into residential site usage. At this prototypical Brownfield site, Jeff personally oversaw all field operations involving a series of subcontractors, including an innovative ex-situ enhanced bioremediation program of impacted soils. Following excavation, Jeff worked closely with California Department of Toxic Substances Control (DTSC) personnel to determine the suitability of the intended site reuse. Jeff implemented an innovative statistical procedure in accordance with State and Federal Environmental Agency Best Practices to assure the site was safe for residential use. The project consists of a large-scale residential subdivision.

**Highway 4 Bypass - Lime Treatment Consultation—Brentwood, CA**

*Project Manager.* Jeff served as Project Manager. He provided consultation services that consisted of a variety of forensic analyses pertaining to the lime treatment of sub-base soils. Jeff worked closely with the project contractor as well as a diverse range of stakeholders to determine if lime treatment materials used in construction had met project specification. Following several protocols, including ASTM methods, Jeff demonstrated the absence of a statistical correlation that would confirm the use of substandard materials. Jeff's work was used to produce an opinion on behalf of the project team that the treated materials would be expected to adequately perform over the design life of the project, saving significant cost overruns. The project consists of a multi-lane highway constructed within a rapidly growing region of Eastern Contra Costa County. The project consists of a multi-lane highway constructed within a rapidly growing region of Eastern Contra Costa County.

**Lockheed Martin Storm Water Pond No 4—Sunnyvale, CA**

*Project Manager.* Jeff provided permitting consultation services, including the federal and state permitting required for the maintenance of a stormwater detention system. Jeff has also provided geotechnical and environmental support to evaluate the geotechnical conditions of the site. He also determined the absence of environmentally impacted materials within the site area. The site

consists of a stormwater detention basin measuring approximately 4.5 acres in area and located adjacent to sensitive habitat.

**New Farm Agricultural and Meteorological Assessment—Contra Costa County, CA**

*Project Manager.* Jeff managed an agricultural suitability evaluation. As part of the project, a portion of hillside open space is to be devoted to cultivation as olive groves. Jeff led the effort to review USDA soil maps and to test onsite soils for the ability to support olive cultivation. The soils were compared to active olive orchards in other locations of Contra Costa County. The project consists of a residential development with agricultural-intensive open space. Jeff managed an agricultural suitability evaluation. As part of the project, a portion of hillside open space is to be devoted to cultivation as olive groves. Jeff led the effort to review USDA soil maps and to test on-site soils for the ability to support olive cultivation. The soils were compared to active olive orchards in other locations of Contra Costa County. The project consists of a residential development with agricultural-intensive open space.

**San Ramon Village Plaza - Environmental Consultation—Dublin, CA**

*Project Manager.* Jeff contributed to an environmental peer review of previous land uses, which included a former dry cleaner. Further investigation identified impact due to former site operations. Jeff assisted in a remediation program, closely collaborating with other consultants representing different parties of the property transaction. The site was efficiently remediated, allowing for redevelopment. The project consists of a high-density residential development within the 4.68-acre mixed-use San Ramon Village Plaza site.

**Schaefer Ranch - GHAD Consultation—Dublin, CA**

*Project Engineer.* Jeff assisted with the scoping, Plan of Control preparation, budget, and formation processes of a Geologic Hazard Abatement District (GHAD). The scope of the GHAD includes maintenance of slopes, water conveyance features, habitat, and other features. Proactive maintenance, assessment, repair and replacement are also the responsibility of the GHAD subject to the limitations of the Plan of Control. The project consists of a large-scale residential subdivision in the East Bay hills west of Dublin.

**Sparklizing Cleaners and Laundry—Fremont, CA**

*Project Engineer.* Jeff provided review and data analysis for this former dry cleaning facility that had released tetrachloroethylene (PCE) to site soil and groundwater. Work included site characterizations using direct push borings, soil gas surveys, well installations, and a remedial alternatives evaluation. He has also assisted in the development of a remedial program for the site. The project site consists of a dry-cleaning facility located within a commercial/retail center. Dry-cleaning operations occurred at the facility since 1974 and resulted in chlorinated solvent impacts to soil and groundwater beneath the site. As a result, the RWQCB opened a Spills, Leaks, Investigations, and Cleanups (SLIC) case and the site was referred to the Alameda County Water District (ACWD) for lead agency oversight. A series of soil and groundwater investigations identified a source area beneath the drycleaner suite and an adjoining retail suite. ENGEO prepared a Corrective Action Plan (CAP) and coordinated the in-situ chemical oxidation program that consisted of injecting 35,000 gallons of potassium permanganate to the subsurface to oxidize chlorinated solvents. The project is currently in the post-remediation monitoring phase.

**Stone Lock District Development - Consulting Services—West Sacramento, CA**

*Project Engineer.* Jeff prepared a pro forma analysis of infrastructure-related costs for a preliminary development concept of the property. The analysis included a cost estimate for all site improvements, grading, utilities, and non-structural facilities. Included in the analysis was an evaluation of the existing adjacent levee system. Jeff worked with other team members to provide

a preliminary assessment of the existing levee condition and prepared a cost estimate for levee rehabilitation and reconstruction. The project consists of a proposed mixed-use redevelopment as part of a city revitalization plan.

**Torian Parcels - Additional Phase II Environmental Site Assessment—Newark, CA**

*Project Manager.* Jeff served as Project Manager and Project Engineer. He provided comprehensive geotechnical and environmental evaluation. Several significant geotechnical and environmental conditions existed at the property, including compressible soils, liquefiable soils, and significant deposits of non-engineered fill and debris. Several areas of soil and groundwater environmental impact were present due to historic industrial use at and in the vicinity of the site. Jeff performed a financial analysis of several mitigation alternatives to identify the most cost effective remedial solution, one in which a single remedial program in several locations addressed both environmental and geotechnical impact. Additionally, Jeff worked closely with the environmental oversight agency to develop a work plan to assess potential environmental impact. In developing and implementing the work plan, Jeff was able to demonstrate that environmental impact at the property was not as extensive as previously believed. This allowed for an alteration of the proposed site plan to avoid areas of potential impact, saving significant projected redevelopment costs. The project consists of a residential redevelopment of a 40-acre property formerly used for industrial purposes. The project consists of a residential redevelopment of a 40-acre property formerly used for industrial purposes.

**Los Banos Airport - Phase I ESA—Los Banos, CA**

*Project Engineer.* Jeff provided a Phase I ESA, prepared a soil and groundwater characterization program, and developed a conceptual soil remediation work plan as part of a multi-phase development. The Los Banos Airport project measures approximately 112 acres in area.

**Navlet's Garden Center Concord - Phase I ESA—Concord, CA**

*Project Manager.* Jeff prepared a Phase I ESA for the site. Jeff was able to effectively navigate through the complex historic records and ownership legacy associated with the property. He prepared a report that satisfied the demands and deadline of both the ownership entity and the financial institutions associated with the property. The project consists of a Navlet's Garden Center.

**Mare Island, 3rd and Connelly Utility Corridor Environmental Services—Vallejo, CA**

*Project Engineer.* Jeff provided environmental consultation support. During excavation of the utility corridor, zones of impacted soil were identified and removed from an approximate 9,300-square-foot footprint area and depths from 5 to 10½ feet below existing grade. The project consisted of utility demolition and soil excavation activities required to prepare for construction of a 300-foot water and sewer utility corridor along Connelly Street between 3rd Street and Azuar Drive.

**Maggiore Property - Soil Remediation—Brentwood, CA**

*Project Engineer.* Jeff directed field remediation operations for the site, which had been affected by an unauthorized subsurface petroleum product release. He managed a site plume delineation and groundwater-monitoring program. Additionally, Jeff performed RBCA Tier I and Tier II assessments to determine feasibility of residential development of property. The project consists of a small residential subdivision.

**Cree Court Slide Repair—San Ramon, CA**

*Project Engineer.* Jeff assisted in the development and implementation of a custom-tailored “top-down” construction procedure, allowing the project to be constructed on time and under

budget. Additionally, Jeff helped develop an innovative non-structural grouting procedure to verify proper structural tieback performance. The project consisted of an integrated structural and grading-related repair for the mitigation of a large active landslide in proximity to existing homes. A 70-foot-high retaining wall is now in place to stabilize a major, active landslide.

**Sequoia/Conifer Terrace - Structural Repair Design—Danville, CA**

*Project Engineer.* Jeff assisted in the design of a structural repair system for a landslide remediation project within a residential setting. He provided recommendations to help optimize construction of system and lessen financial burden of project. The project consisted of a unique structural repair for the mitigation of a large active landslide in close proximity to existing homes.

## ASSESSMENT OF ENVIRONMENTAL NOISE

---

### 1.0 INTRODUCTION

*This report evaluates potential impacts associated with the construction and operation noise of The Vinyards Development.*

### 1.1 Project Description

The proposed project consists of 28 single-family homes, which are shown in Figure 1. The project is bounded by Thiessen Street to the west, Manoir Line to the east, Vineyard Avenue to the north, and Old Vineyard Avenue to the south.

**Figure 1 – Aerial Image of the Proposed Project Site**

### 1.2 Characteristics of Noise

Noise is usually defined as unwanted sound and can be an undesirable by-product of society's normal day-to-day activities. Sound becomes unwanted when it interferes with normal activities, causes actual physical harm, or has an adverse effect on health.

People judge the relative magnitude of sound sensation in subjective terms such as "noisiness" or "loudness." However, the sound pressure magnitude can be objectively measured and quantified using a logarithmic ratio of pressures which yields the level of sound, utilizing the measurement scale of decibels (dB). The decibel is generally adjusted to the A-weighted level (dBA) which de-emphasizes very low frequencies to better approximate the human

ear's range of sensitivity. In practice, the noise level of a sound source is measured using a sound level meter that includes an electronic filter corresponding to the A-weighting curve. Table A.1 in Appendix A of this report defines the decibel along with other technical terms used in this analysis.

Even though the A-weighted scale accounts for the relative loudness perceived by the human ear and, therefore, is commonly used to quantify individual events or general community sound levels, the degree of annoyance or other response effects also depends on several other perceptibility factors, including:

- Ambient (background) sound level
- Magnitude of the event sound level relative to the background noise
- Spectral (frequency) composition (e.g. presence of tones)
- Duration of the sound event
- Number of event occurrences, repetitiveness, and intermittency
- Time of day the event occurs.

In determining the daily level of environmental noise, it is important to account for the difference in human responses to daytime and nighttime noises. At night, exterior background noise levels are generally lower than daytime levels. However, most household noise also decreases at night, and exterior noise may become increasingly noticeable. Further, most people sleep at night and have greater sensitivity to noise intrusion. To account for human sensitivity to nighttime noise levels, a 24-hour descriptor, the Day-Night Average Sound Level (DNL or LDN) has been developed. The DNL divides the 24-hour day into a daytime period of 7:00 a.m. to 10:00 p.m. and a nighttime period of 10:00 p.m. to 7:00 a.m. In determining the DNL, noise levels occurring during the nighttime period are increased by 10 dB to account for the greater sensitivity during the nighttime.

The effects of noise on people fall into three general categories:

- Subjective effects of annoyance and nuisance
- Interference with activities such as speech, sleep and learning
- Physiological effects such as hearing loss

In most cases, the levels associated with environmental noise produce effects only in the first two categories. However, workers in industrial plants may experience noise effects in the last category. There is no completely effective way to measure the subjective effects of noise or the corresponding reactions of annoyance, because of the wide variation in individual thresholds of annoyance and degrees to which people become acclimated to noise. Thus, an important way of determining a person's subjective reaction to a new noise source is by comparison to the existing environment to which they are accustomed (the "ambient environment"). In general, the more the level of a noise event exceeds the prevailing ambient noise level, the less acceptable the noise source will be to those exposed to it.

With regard to increases in A-weighted noise levels, the following relationships are applicable to this analysis:

- Except in carefully controlled laboratory experiments, a 1 dBA change cannot be perceived.
- Outside of a laboratory, a 3 dBA change will be generally perceivable by most people.
- A change in level of at least 5 dBA is considered a noticeable change by most people.
- A 10 dBA change will result in the perception of doubling or halving the loudness of the noise.

Common noise levels associated with various activities are shown in Figure 2 below.

Figure 2 - Common Noise Levels

Noise sources are either “point sources”, such as stationary equipment or individual motor vehicles, or “line sources”, such as a roadway with a large number of mobile point sources (motor vehicles). Sound generated by a stationary point source typically diminishes (attenuates) at a rate of 6 dBA for each doubling of distance from the source to the receptor at acoustically “hard” sites, and at a rate of 7.5 dBA at acoustically “soft” sites. A “hard” or reflective site does not provide any excess ground-effect attenuation and is characteristic of asphalt, concrete, and very hard packed soils. An acoustically “soft” or absorptive site is characteristic of normal earth and most ground

with vegetation.<sup>1</sup> For example, a 60 dBA noise level measured at 50 feet from a point source at an acoustically hard site would be 54 dBA at 100 feet from the source and it would be 48 dBA at 200 feet from the source. Sound generated by a line source typically attenuates at a rate of 3 dBA and 4.5 dBA per doubling of distance from the source to the receptor for hard and soft sites, respectively.<sup>2</sup> Man-made or natural barriers can also attenuate sound levels.

The minimum attenuation of exterior to interior noise provided by typical structures is provided in Table 1, Outside to Inside Noise Attenuation.

---

**Table 1**  
**Outside to Inside Noise Attenuation (dBA)**

<b>Building Type</b>	<b>Open Windows</b>	<b>Closed Windows<sup>1</sup></b>
Residences	17	25
Schools	17	25
Churches	20	30
Hospitals/Convalescent Homes	17	25
Offices	17	25
Theaters	20	30
Hotels/Motels	17	25

*Source: Transportation Research Board, National Research Council, Highway Noise: A Design Guide for Highway Engineers, National Cooperative Highway Research Program Report 117.*

<sup>1</sup> *As shown, structures with closed windows can attenuate exterior noise by a minimum of 25 to 30 dBA.*

---

### **1.3 Characteristics of Vibration**

Vibration is minute variation in pressure through structures and the earth, whereas, noise is minute variation in pressure through air. Some vibration effects can be caused by noise; e.g., the rattling of windows from truck pass-bys. This phenomenon is related to the coupling of the acoustic energy at frequencies that are close to the resonant frequency of the material being vibrated. Ground-borne vibration attenuates rapidly as distance from the source of the vibration increases. Vibration amplitude can be measured as peak particle velocity (PPV), the maximum instantaneous peak amplitude in inches per second, or root-mean-square (RMS) velocity in inches per second or as vibration level in decibels (VdB) referenced to 1 micro-inch per second. The ratio between the PPV and the maximum RMS amplitude is termed the “crest factor.” According to the Federal Transit Administration (FTA), the PPV level for construction equipment is typically 1.7 to 6 times greater than the RMS vibration level. The FTA uses a crest factor of 4 for the conversion of PPV levels to RMS vibration levels. For the purposes of ground-borne vibration analysis of

<sup>2</sup> U.S. Department of Transportation, Federal Highway Administration, *Highway Noise Fundamentals*, (Springfield, Virginia: U.S. Department of Transportation, Federal Highway Administration, September 1980), p. 97.

impacts to existing structures, vibration velocity is described in terms of PPV. For the analysis of the human response to vibration, VdB is utilized.

The vibration velocity threshold of perception for humans is approximately 65 VdB, and a vibration velocity of 75 VdB is the approximate dividing line between barely perceptible and distinctly perceptible levels for many people<sup>3</sup>. Most perceptible indoor vibration is caused by sources within buildings such as operation of mechanical equipment, movement of people, or the slamming of doors. Typical outdoor sources of perceptible ground-borne vibration are construction equipment, steel-wheeled trains, and traffic on rough roads. Common ground-induced vibrations related to roadway traffic and construction activities pose no threat to buildings or structures. If a roadway is smooth, the ground-borne vibration from traffic is barely perceptible. The range of interest is from approximately 50 VdB, which is typically the background vibration velocity, to 94 VdB. This 94 VdB vibration level corresponds to 0.2 PPV, which is the general threshold where minor damage can occur in non-engineered timber and masonry buildings.

## **2.0 REGULATORY FRAMEWORK**

Many government agencies have established noise regulations and policies to protect citizens from potential hearing damage and various other adverse physiological and social effects associated with noise and ground-borne vibration. The Town of Pleasanton has adopted the Environment and Sustainability section of the General Plan, which is based in part on federal and State regulations and is intended to control, minimize or mitigate environmental noise effects. The regulations and policies that are relevant to project construction and operation noise are discussed below.

### **2.1 Applicable State Noise Standards**

The California Environmental Quality Act (CEQA) Guidelines include thresholds that can be used by lead agencies to evaluate the potentially significant impacts of environmental noise and vibration attributable to a proposed project.

The guidelines ask whether the project would result in:

- Generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of the standards established in the local general plan or noise ordinance, or applicable standards of other agencies?
- Generation of excessive ground-borne vibration or ground-borne noise levels?
- For a project located within the vicinity of a private airstrip or an airport land use plan, or where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?

---

<sup>3</sup> U.S. Department of Transportation, Federal Transit Administration, *Transit Noise and Vibration Impact Assessment*, (Washington, DC: U.S. Department of Transportation, Federal Transit Administration, May 2006), p. 7-8.

The CEQA Guidelines and the Town's General Plan provide no definition of what constitutes a substantial noise increase. Typically, in high noise environments, if the DNL due to the project would increase by 3 dBA at noise sensitive receptors, the impact is considered significant on the basis that 3 dBA is the smallest increase in noise level that is audible.<sup>4</sup>

## **2.2 City of Pleasanton General Plan – Noise Element**

The Noise Element of the City of Pleasanton General Plan identifies noise and land use compatibility standards for various land uses. The Noise and Land-Use Compatibility Guidelines listed in Figure 3 are used to determine the compatibility of land uses when evaluating proposed development projects.

- The goals for maximum outdoor noise levels in residential areas are an Ldn of 60 decibels for single-family and 65 decibels for multi-family units, levels intended to guide the design and location of future development and goals for the reduction of noise in existing development. However, all residential areas cannot necessarily reach this goal due to economic or aesthetic considerations. This goal should generally be applied where outdoor use is a major consideration (e.g., backyards in single-family housing developments and recreation areas in multi-family housing projects). People in front yards can generally tolerate an Ldn of up to 65 decibels. The interiors of these houses would generally not be uncomfortably loud, with proper mitigation such as sound-rated windows.
- State of California Noise Insulation Standards require that indoor noise levels not exceed an Ldn of 45 decibels in multi-family dwellings. While not applicable to single-family homes, Pleasanton considers this indoor criterion as the maximum acceptable indoor noise level for single-family homes, as well. As discussed above, the outdoor noise standard for single-family homes will result in at least an indoor single-family Ldn noise level of 45 dB because of the noise insulation afforded by typical residential construction.

---

<sup>4</sup> Lord, H. W., Gatley, W. S., & Evensen, H. A. (1987). *Noise control for engineers*. R.E. Krieger Pub. Co., P26-27.

**Figure 3 – Land Use Noise Compatibility Criteria**

Land Use Category	Exterior Noise Exposure (L <sub>dn</sub> )					
	55	60	65 <sup>b</sup>	70	75	80
Single-Family Residential <sup>a</sup>						
Multi-Family Residential, Hotels, and Motels <sup>a</sup>						
Outdoor Sports and Recreation, Neighborhood Parks and Playgrounds						
Schools, Libraries, Museums, Hospitals, Personal Care, Meeting Halls, Churches						
Office Buildings, Business, Commercial, and Professional						
Auditoriums, Concert Halls, Amphitheaters						

- a In noise environments resulting primarily from railroad trains, exterior noise levels up to 70 dBA L<sub>dn</sub> are normally acceptable recognizing that day-night average noise levels are controlled by intermittent, loud events.
- b <65 dBA outdoors = < 45 dBA indoors

**NORMALLY ACCEPTABLE**

Specified land use is satisfactory, based upon the assumption that any buildings involved are of normal conventional construction, without any special insulation requirements

**CONDITIONALLY ACCEPTABLE**

Specified land use may be permitted only after detailed analysis of the noise reduction requirements and needed noise insulation features included in the design.

**UNACCEPTABLE**

New construction or development should generally not be undertaken because mitigation is usually not feasible to comply with noise element policies.

### 2.3 City of Pleasanton Municipal Code – Noise Ordinance

Chapter 9.04, Section 9.04.030 (A) of the City of Pleasanton Municipal Code establishes the following:

*“Residential Property. No person shall produce or allow to be produced by any machine, animal, device, or any combination of the same, on residential property, noise level in excess of 60 dBA at any point outside of the property plane, unless otherwise provided in this chapter.”*

Section 9.04.070 of the Noise Ordinance states Daytime exceptions, indicating the following:

*“Any noise which does not produce a noise level exceeding 70 dBA at a distance of 25 feet under its most noisy condition of use shall be exempt from the provisions of Sections 9.04.030, ..., of this chapter between the hours of 8:00 a.m. and 8:00 p.m. daily, except Sundays and holidays, when the exemption herein shall apply between 10:00 a.m. and 6:00 p.m.”*

Section 9.04.100 of the Noise Ordinance limits construction activity to the hours shown in Table 2, below.

Construction activity during the times reflected below is allowed if the activity meets one of the following conditions:

1. No individual piece of equipment shall produce a noise level exceeding eighty-three (83) dBA at twenty-five (25) feet. If the device is housed within a structure on the property, the measurement shall be made outside the structure at a distance as close to twenty-five (25) feet from the device as possible.
2. The noise level at any point outside of the property plane shall not exceed eighty-six (86) dBA.

**Table 2**  
**Hours for Construction Activities**

Day of Week	Allowable Hours
Sunday and Legal Holidays	10:00am – 6pm
All other days	8:00am – 8:00pm
Source: City of Pleasanton Municipal Code, Sec. 9.04.100	

Construction activity outside the above hours is prohibited, although subject to certain exceptions.

## 2.4 Ground-Borne Vibration

The City’s General Plan and Municipal Code does not regulate ground-borne vibration levels at existing structures.

The Federal Transit Administration (FTA)’s Transit Noise and Vibration Impact Assessment Manual sets recommended levels of ground-borne vibration at neighboring properties based on annoyance and building damage. FTA guidelines suggest that vibration levels above 80 VdB will typically cause annoyance to typical residential uses. Furthermore, vibration levels related to construction activities should not exceed 94 VdB to prevent structural damage for non-engineered timber and masonry buildings.

## 2.5 Project Requirements

The above requirements for the project are summarized in the following Table 3.

**Table 3**  
**Project Requirements**

Activity	Standard
Exterior Noise at Single-Family Residences	- 60 Ldn
Interior Noise in Residences	- 45 Ldn
Construction Noise	- Limited to the hours of: 10:00am – 6:00pm      Sunday and holidays 8:00am – 8:00pm      All other days - At property line: 86 dBA
Operational Noise	- At residential property: - 60 dBA - Daytime Exceptions - If the device produces 70 dBA at max: 10:00am – 6:00pm      Sunday and holidays 8:00am – 8:00pm      All other days
Vibration	- Typical annoyance at residential properties: - 80 Vdb - Vibration-related Building Damage Thresholds - 94 VdB

### **3.0 ENVIRONMENTAL IMPACTS AND SIGNIFICANCE**

#### **3.1 Significance Thresholds**

The following significance thresholds are used in this report to evaluate the significance of the project noise impacts:

1. Would the project result in generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of the standards established in the local general plan or noise ordinance, or applicable standards of other agencies?
2. Would the project result in generation of excessive ground-borne vibration or ground-borne noise levels?
3. For a project located within the vicinity of a private airstrip or an airport land use plan, or where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?

#### **3.2 Impact 1. Generation of noise levels in excess of standards**

Threshold: Would the project result in generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of the standards established in the local general plan or noise ordinance, or applicable standards of other agencies?

##### *3.2.1 Existing Ambient Monitored Noise Levels*

The proposed project site is bounded by Vineyard Avenue to the north, Manoir Line to the east, Thiessen Street to the west and Old Vineyard Avenue to the south. The surrounding land use is predominantly single-family residential. The primary noise source in the area is traffic from Vineyard Avenue.

To establish existing ambient noise levels in areas surrounding the project site, a field monitoring study was conducted. Measurements were performed in and around the project site for documenting the ambient conditions. NTi Audio Model XL2 Sound Level Meter, which satisfy the American National Standards Institute (ANSI) for general environmental noise measurement instrumentation, was used for this purpose. Vehicular traffic is the predominant noise source around the project site. Measurements were performed at several locations as shown in Figure 4. The measurements occurred at these locations from June 4 to 5, 2024. Noise readings were measured over 1-second intervals with “A” frequency fast time weighting. The weather conditions were normal, and no anomalies were present during the survey periods.

Table 4 provides the noise level data associated with each monitoring period for each location. As shown, daytime noise levels ranged from 46 dBA to 66 dBA at the project site. The high noise levels measured at some locations was due to the high volume of traffic and heavy vehicle pass-bys.

**Figure 4 – Project Site and Noise Monitoring Locations**

**Table 4  
 Existing Ambient Monitored Noise Levels**

Position	Primary Noise Source	Time	Noise Level (dBA Leq)	Noise Level (dBA L <sub>dn</sub> )
L1	Vineyard Avenue	9am 6/4 – 9am 6/5	46	49
S1	Vineyard Avenue	9:40am 6/4	66	---
S2	Vineyard Avenue	9:20am 6/4	49	---
S3	Vineyard Avenue	10:00am 6/4	49	---

### 3.2.2 Future Exterior Project Noise Levels

The anticipated traffic flow resulting from the proposed project is unlikely to significantly impact on the ambient noise levels in neighboring areas. A barely perceptible change will need an increment of at least 3 decibels and such

a change in sound level will require doubling the volume of traffic in the area. Project traffic study by Hexagon Transportation Consultants, Inc. shows the existing conditions and existing conditions plus project of traffic per hour at Thiessen St and Manoir Ln intersection with Vineyard Ave. Table 5 below summarize the traffic study results and shows the increase expected with the proposed project.

**Table 5  
 Summary of Traffic Volumes**

Location	Existing Peak-Hour Traffic Volumes	Existing plus Project Peak-Hour Traffic Volumes	Increase (%)
Thiessen St.	40	60	50
Manoir Ln.	23	33	43
Vineyard Ave.	764	771	< 1

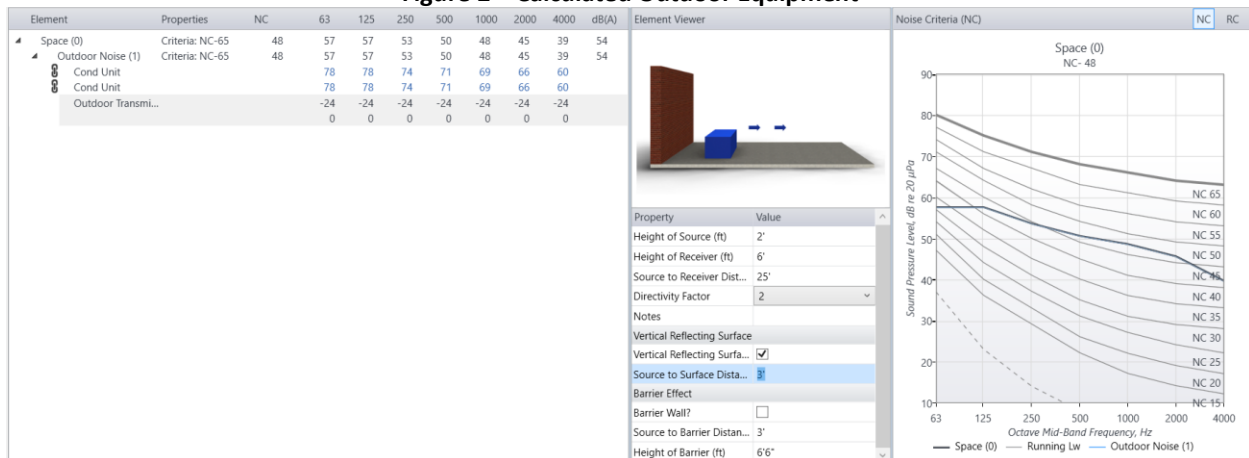

Source: Hexagon Transportation Consultants Inc., Traffic Study 2024.

As indicated in Table 5, the increase is not greater than 50%. Therefore, the resultant off-site noise levels are deemed less than significant, and no additional analysis is required.

### 3.2.3 Permanent Operational Noise

Veneklasen understands that the project will include outdoor mechanical equipment, such as split-system outdoor condensing units. Veneklasen has utilized sound power data for typical air conditioning condensing units which range between 2 to 5 tons. In order to represent the worst-case scenario, Veneklasen modeled the operation of multiple condensing units operating 24-hours a day at a minimum distance of 25 feet which represent the closest distance from the mechanical equipment and the nearest property line. The software AIM by Pottorff was utilized to model this noise condition which considers the distance sound attenuation as well as the height of the mechanical equipment relative to the receiver height.

**Figure 2 – Calculated Outdoor Equipment**

As is shown in the figure above, the predicted mechanical equipment noise level at the nearest property line will be 54 dBA. These levels comply with the Pleasanton Noise Standards of 60dBA. Therefore, the impact is less than significant.

### *3.2.4 Temporary Construction Noise*

To minimize potential impact from construction activities, the City of Pleasanton Municipal Code under Section 9.04.100 limits construction activity from 10:00 a.m. to 6:00 p.m. on Sundays and federal holidays or from 8 a.m. to 8 p.m. on any other day.

Construction equipment noise data was selected from industry-standard reference databases, including the Federal Highway Administration (FHWA) and the Federal Transit Administration (FTA), for equipment typical to projects of this scale.

The construction noise impact was analyzed considering the type and amount of equipment used at each phase of construction. An itemized list of the equipment used at each construction phase was considered based on similar projects and is shown in Table 6.

**Table 6**  
**Typical Equipment used in Construction Phases for Similar Projects**

Phase Name	Equipment Type	Sound Level at Reference Distance (dBA at 50-feet)	Total number of Equipment Allowed to be used at each Phase	Load Factor	Noise Data Source
Phase 1-Site Clearance	Chain saw	85	3	20%	FHWA
	Tractor	88	2	100%	FTA
	Shovel	82	4	100%	FTA
Phase 2-Grading	Dozer	85	3	40%	FHWA
	Grader	85	3	40%	FHWA
Phase 3-Site Utility	Delivery Truck	88	2	100%	FHWA
	Excavators	85	3	40%	FHWA
	Forklifts	80	4	40%	FHWA
Phase 4-Foundation & Slab Pouring	Excavators	85	3	40%	FHWA
	Concrete Truck Mixture	85	3	40%	FHWA
Phase 5-Paving	Dozer	85	3	40%	FHWA
	Paver	88	2	50%	FHWA
	Roller	85	3	20%	FHWA
Phase 6-Building Construction	Pneumatic tools	85	3	50%	FHWA
	Air Compressor	80	4	100%	FHWA

The Noise Ordinance allows construction activity if it meets one of the following noise conditions:

- No individual piece of equipment shall produce a noise level exceeding eighty-three (83) dBA at twenty-five (25) feet. If the device is housed within a structure on the property, the measurement shall be made outside the structure at a distance as close to twenty-five (25) feet from the device as possible.
- The noise level at any point outside of the property plane shall not exceed eighty-six (86) dBA.

All equipment listed in Table 6 above produces noise levels above 83 dBA at 25 feet. Veneklasen understands that the equipment will be moving through the site and multiple construction equipment will operate simultaneously. To represent the average noise levels at each construction phase, Veneklasen assumed that the equipment would be moving between the center of the site and near all property lines. Therefore, the noise level of eighty-six (86) at any point outside the property plane is considered for the analysis.

The nearest property line to each side of the project site from the center of the closest proposed building is shown in Table 7 below.

**Table 7**  
**Distance to the Property Line from the Nearest Proposed Building**

Receiver	Distance to the Property Line (feet)
East	193
North	236
West	110
South	179

The maximum predicted average noise levels at these locations due to construction operations are shown in Table 8 below.

**Table 8**  
**Construction Noise Levels at the Boundary of Receiver Locations**

Project Phase	Receptor	Construction Noise Level (dBA)
Site Clearance	East	78
	North	76
	West	82
	South	78
Phase 2-Grading	East	72
	North	71
	West	77
	South	73
Phase 3-Site Utility	East	77
	North	75
	West	82

	North	74
	West	80
	South	76
Phase 6-Building Construction	East	72
	North	71
	West	77
	South	73

According to the equipment list considered from similar projects, the construction noise level will range between 71 to 82 dBA at the nearest property line. Therefore, the project construction noise impact is less than significant with mitigation.

**Mitigation 1.** The impact is less than significant and the following mitigation measures have been identified to further minimize potential effects of construction noise on adjacent properties.

- Limit construction activity to the hours listed in Table 2.
- Schedule highest noise-generating activity and construction activity 75 ft away from the nearest property line.
- Equip internal combustion engine-driven equipment with original factory (or equivalent) intake and exhaust mufflers which are maintained in good condition.
- Prohibit and post signs prohibiting unnecessary idling of internal combustion engines.
- Locate all stationary noise-generating equipment such as air compressors and portable generators as far as practicable from project boundaries.
- Utilize “quiet” air compressors and other stationary equipment where feasible and available.
- Designate a noise disturbance coordinator who would respond to neighborhood complaints about construction noise by determining the cause of the noise complaints and require implementation of reasonable measures to correct the problem. Conspicuously post a telephone number for the disturbance coordinator at the construction site.

The project has no peculiar impacts.

### **3.3 Impact 2. Excessive ground-borne noise and vibration**

Threshold: Would the project result in generation of excessive ground-borne vibration or ground-borne noise levels?

Construction equipment associated with building the project would be the only vibration-generating source introduced by the project, as there are no vibration sources from operations that will introduce vibration into the environment. Vibration generated by construction equipment, unless specified otherwise through permitting, would only occur during approved work hours per the City of Pleasanton, 8:00 am – 8:00 pm, six days a week and 10:00 a.m. – 6 p.m., Sundays and holidays. Table 6 shows the equipment used in each construction phase.

Table 9 below shows the construction equipment proposed by the project planning group and the typical vibration levels generated during operation. It is understood that for this project, pile drivers will not be used. The vibration levels for the equipment used in the construction phase are unavailable, therefore, Veneklasen utilized the vibration levels provided by the FTA Manual. Calculations were performed according to the FTA manual method. Samples of the calculations are included in Appendix D.

**Table 9**  
**Vibration Levels (Lv, VdB) of Typical Construction Equipment at 25 ft**

Equipment	Reference RMS Velocity (Lv) at 25 ft. (VdB)
Vibratory roller	94
Large bulldozer	87
Caisson drilling	87
Loaded trucks	86
Jackhammer	79
Small bulldozer	58

Source: Federal Transit Administration (except Hanson 2001 for Vibratory rollers), 1995.

Based on the reference vibration levels generated by typical construction equipment and analysis carried out by Veneklasen, construction equipment vibration levels at the project site boundary will not exceed the criteria per FTA guidelines shown in Table 3. Therefore, the impact is less than significant, and no mitigation is required. The predicted vibration levels of the proposed construction equipment at the boundary of the project site are shown in Table 10.

**Table 10**  
**Construction Vibration Levels at the Boundary of Project Site**

Project Phase	Receptor	Construction Vibration Level, Lv, dB

### 3.4 Impact 3. Private Airstrip and Airport noise exposure

Threshold: For a project located within the vicinity of a private airstrip or an airport land use plan, or where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?

There are no private airstrips located within two miles away of the project site.

The closest public use airport to the project is the Livermore Municipal Airport, which is 2.4 miles away from the project site.

Therefore, there is no impact.

## 4.0 SUMMARY

### 4.1 Summary of significance of impacts

CEQA Noise Impact Question		No Impact	Less Than Significant	Less Than Significant with Mitigation	Potentially Significant
<b>1</b>	Generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies.			<b>X</b>	
<b>2</b>	Generation of excessive ground borne vibration or ground born noise levels.		<b>X</b>		
<b>3</b>	For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels	<b>X</b>			

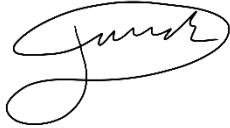

### 4.2 Summary of Mitigation Measures

**Mitigation 1.** The impact is less than significant and the following mitigation measures have been identified to further minimize potential effects of construction noise on adjacent properties.

- Limit construction activity to the hours listed in Table 2.
- Schedule highest noise-generating activity and construction activity 75 ft away from the nearest property line.
- Equip internal combustion engine-driven equipment with original factory (or equivalent) intake and exhaust mufflers which are maintained in good condition.
- Prohibit and post signs prohibiting unnecessary idling of internal combustion engines.
- Locate all stationary noise-generating equipment such as air compressors and portable generators as far as practicable from project boundaries.
- Utilize “quiet” air compressors and other stationary equipment where feasible and available.
- Designate a noise disturbance coordinator who would respond to neighborhood complaints about construction noise by determining the cause of the noise complaints and require implementation of reasonable measures to correct the problem. Conspicuously post a telephone number for the disturbance coordinator at the construction site.

We trust this meets the project’s needs. If you have any questions, please do not hesitate to call.

Sincerely,  
Veneklasen Associates, Inc.

## APPENDIX A

**Table A.1 – Definitions of Noise-Related Terms**

<b>Term</b>	<b>Definition</b>
<b>Decibel, dB</b>	A unit describing the amplitude of sound equivalent to 20 times the logarithm, to the base 10, of the ratio of the pressure of the sound to the reference pressure of 20 $\mu$ Pa.
<b>Frequency, Hz</b>	The number of complete pressure fluctuations per second above and below atmospheric pressure.
<b>A-Weighted Sound Level, dBA</b>	The sound pressure level in decibels as measured in an A-weighting filter network. The A-weighting de-emphasizes the very low frequency components of the sound in a manner similar to the frequency response of the human ear and correlates well with subjective reactions to noise. All sound levels in this report are in the A-weighted scale.
<b>L<sub>0</sub> (L<sub>max</sub>), L<sub>2</sub>, L<sub>8</sub>, L<sub>25</sub>, L<sub>50</sub></b>	The A-weighted noise levels that are exceeded 0 percent (maximum noise level), 2 percent, 8 percent, 25 percent, and 50 percent of the time during the measurement period.
<b>Equivalent Noise Level, L<sub>eq</sub></b>	The average A-weighted noise level during the stated measurement period.
<b>Community Noise Equivalent Level, DNL</b>	The average A-weighted noise level during a 24-hour day, obtained after addition of 5 decibels in the evening from 7:00 P.M. to 10:00 P.M., and after addition of 10 decibels to noise levels in the night between 10:00 P.M. and 7:00 A.M.
<b>Day-Night Noise Level, DNL, DNL</b>	The average A-weighted noise level during a 24-hour day, obtained after addition of 10 decibels to levels measured in the night between 10:00 P.M. and 7:00 A.M.
<b>Ambient Noise Level</b>	The composite of noise from all sources near and far. The normal or existing level of environmental noise at a given location.
<b>Impulsive Noise</b>	Sound of short duration. Typically associated with an abrupt onset and rapid decay (i.e., gun-shots, etc.).
<b>Pure Tones</b>	A sound wave, residing over a small range of frequencies, which has a sinusoidal behavior over time.
<b>VdB</b>	Unit of measurement used by FHWA to describe ground-borne vibration. Equivalent to 20 times the logarithm, to the base 10, of the ratio of the root mean square ground-borne velocity to the reference of reference of $1 \times 10^{-6}$ in/sec.

**Appendix H:  
Transportation Analysis**

## Memorandum

---

Date: November 19, 2024  
To: Mr. Matt Nelson, City of Pleasanton  
From: Brett Walinski, T.E.  
Subject: Transportation Analysis for 1 Vineyard Avenue Residential Development

---

Hexagon Transportation Consultants, Inc. has completed this transportation analysis for the proposed residential development at 1 Vineyard Avenue in Pleasanton, California. The site location is shown on Figure 1. The existing site is vacant. The project proposes to construct 27 single family homes with accessory dwelling units (ADUs). Primary access to the site would be provided via Thiessen Street and Manoir Lane. The site plan is shown on Figure 2.

### Scope of Study

The analysis was conducted following the standards and methodologies prescribed by the *City of Pleasanton 2023-2031 Housing Element Update EIR* (hereafter referred to as the "Housing Element EIR") and the California Environmental Quality Act (CEQA). In accordance with Housing Element EIR methods, a VMT analysis was performed.

In addition to a VMT analysis, the City of Pleasanton required a Local Transportation Analysis (LTA) to evaluate the project's adverse effects on nearby intersection operations and to identify any potential operational deficiencies caused or exacerbated by the project. To that end, this study includes an analysis of weekday peak hour traffic conditions at six intersections on Vineyard Avenue.

These are identified below and shown on Figure 1.

1. Vineyard Avenue & Pietronave Lane/Yolanda Court (signalized)
2. Vineyard Avenue & Vineyard Terrace (unsignalized)
3. Vineyard Avenue & Thiessen Street (unsignalized)
4. Vineyard Avenue & Manoir Lane (unsignalized)
5. Vineyard Avenue & Safreno Way (unsignalized)
6. Vineyard Avenue & Machado Place (unsignalized)

The effects of the project were evaluated during the weekday AM and PM peak hours. The AM peak hour of traffic is typically between 7:00 AM and 9:00 AM and the PM peak hour is typically between 4:00 PM and 6:00 PM. It is during these periods that the most congested traffic conditions occur on an average weekday.

This report also includes a focused evaluation of project site access and circulation as well as impacts to bikes, pedestrians, and transit.

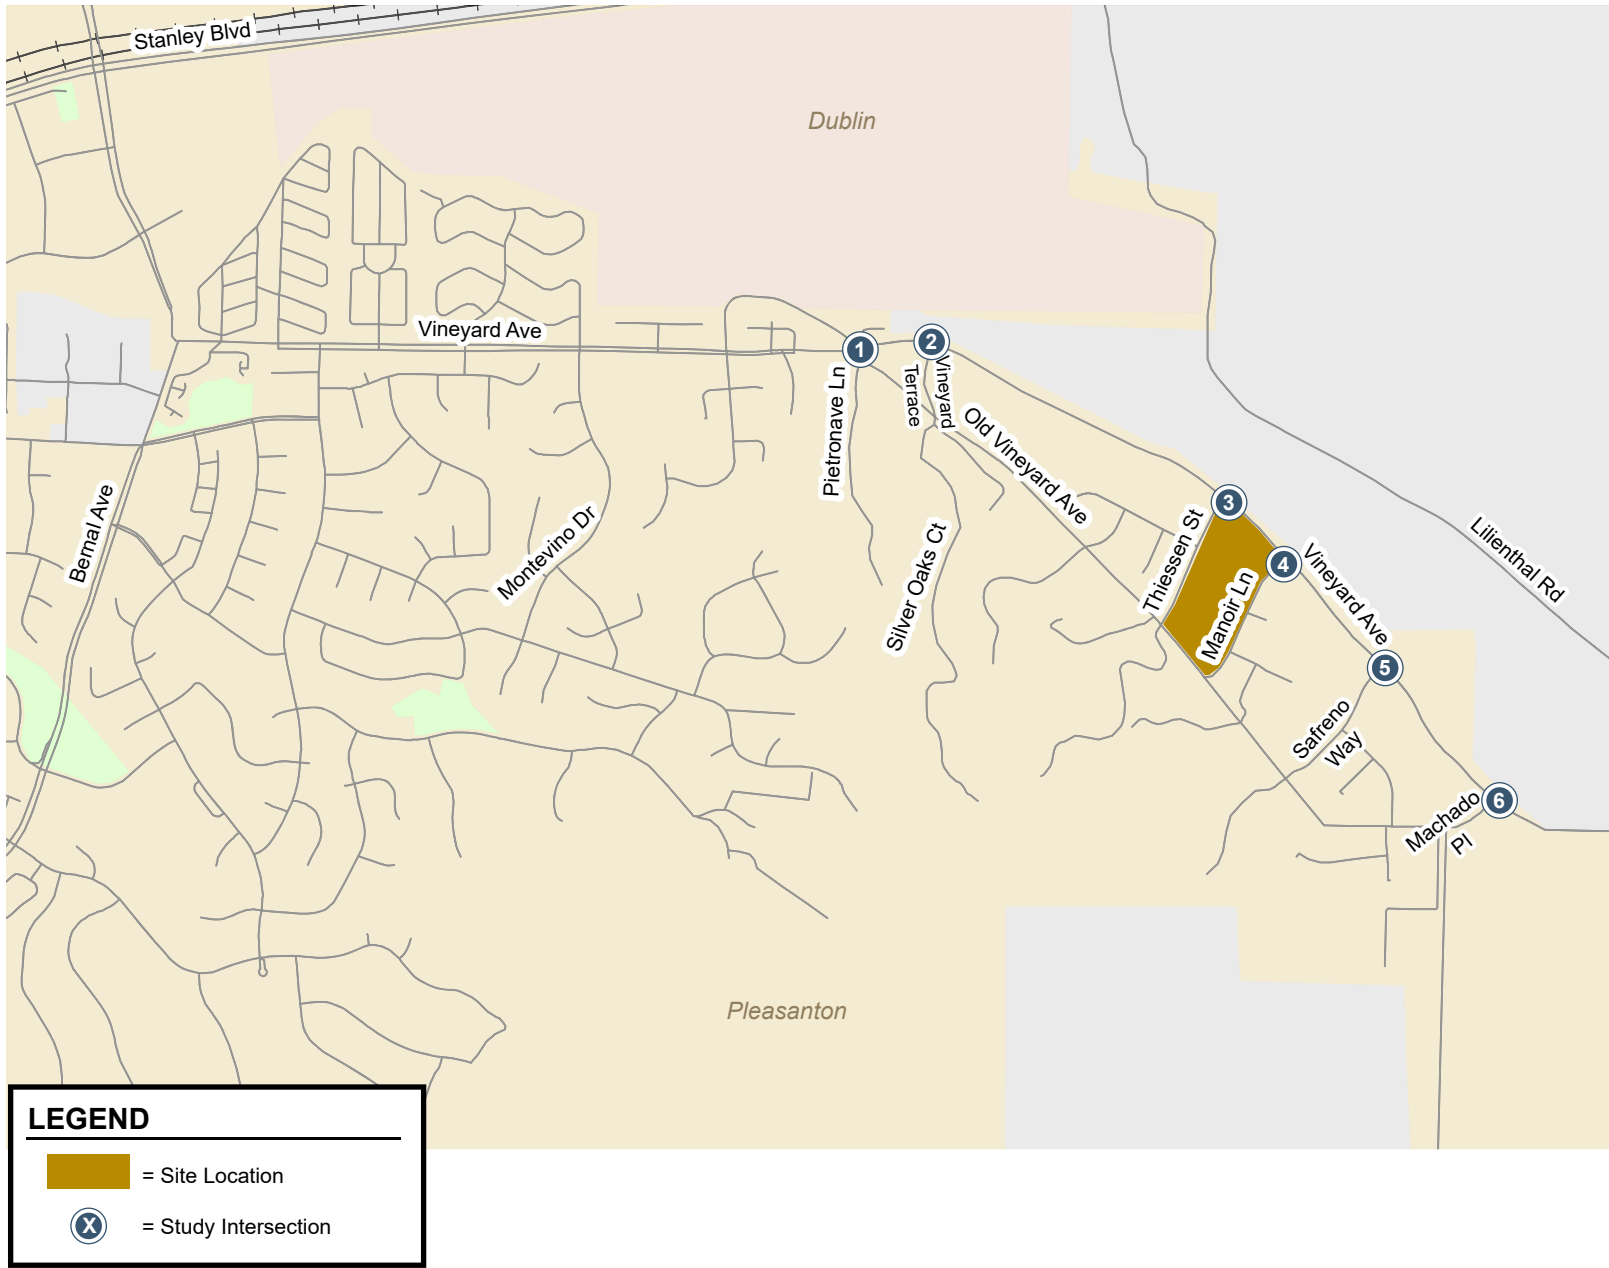

Figure 1  
Site Location

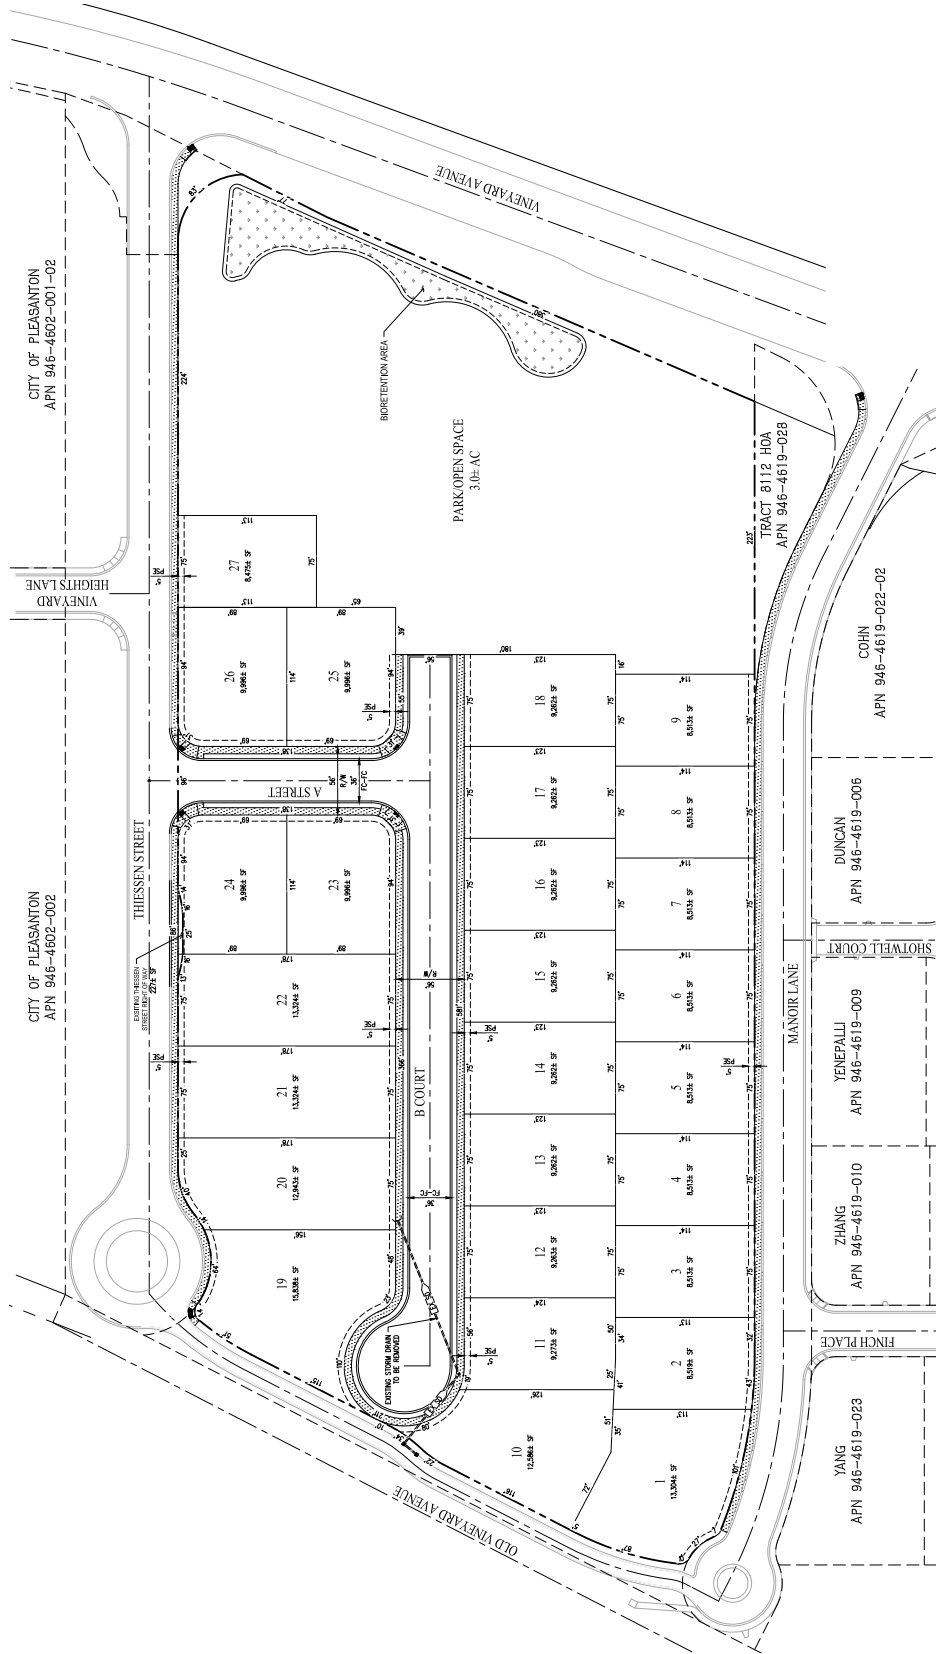

Figure 2  
Site Plan

Traffic conditions were evaluated for the following scenarios:

**Scenario 1: Existing Conditions.** Existing conditions are represented by existing peak hour traffic volumes on the existing roadway network. Existing traffic volumes were obtained from recent traffic counts conducted in February and August 2024.

**Scenario 2: Existing Plus Project Conditions.** Project trips were added to existing traffic volumes. Existing plus project conditions were evaluated relative to existing conditions in order to determine potential adverse project effects.

**Scenario 3: Cumulative Conditions without the Project.** Cumulative conditions are represented by buildout of the City's 2040 General Plan. Traffic volumes for cumulative conditions without the project were provided in the City's Synchro database, which includes the 2040 buildout of the City's General Plan.

**Scenario 4: Cumulative Conditions with the Project.** Traffic volumes for cumulative conditions with the project were estimated by adding the project traffic to the cumulative without project traffic volumes. Cumulative with project conditions were evaluated relative to cumulative without project conditions in order to determine potential far-term adverse project effects.

A Congestion Management Program (CMP) analysis was not required because the project is estimated to generate fewer than 100 peak-hour trips.

## Intersection Analysis Methods

Traffic conditions at the signalized study intersections were evaluated using level of service (LOS). *Level of Service* is a qualitative description of operating conditions ranging from LOS A, or free-flow conditions with little or no delay, to LOS F, or jammed conditions with excessive delays.

The City of Pleasanton evaluates level of service at signalized intersections based on the Highway Capacity Manual (HCM) level of service methodology using Synchro software. The HCM method evaluates signalized intersection operations on the basis of average control delay time for all vehicles at the intersection. The City of Pleasanton level of service standard for signalized intersections is LOS D, with exceptions that are not applicable to this study. All of the study intersections are located in the City of Pleasanton and are therefore subject to the City of Pleasanton level of service standards.

The project is said to create an adverse effect if (1) it would cause the signalized intersection LOS to degrade below its level of service standard or (2) it would add 10 or more project trips to a signalized intersection that is operating below its level of service standard under no project conditions.

An adverse effect at a signalized intersection is said to be satisfactorily mitigated when measures are implemented that would restore intersection levels of service to an acceptable LOS or restore the intersection to operating levels that are better than no project conditions.

Five of the six study intersections are unsignalized. Synchro software was also used to apply the HCM operations method for evaluation of conditions at unsignalized intersections. This method is applicable for side-street-stop-controlled (SSSC) intersections. For SSSC intersections, levels of service and delays are calculated for both the overall average delay for the intersection and for the approach with highest delay.

The level of service analysis at unsignalized intersections was supplemented with an assessment of the need for signalization of the unsignalized intersections. For this study, the need for signalization is assessed, in part, on the basis of the operating conditions at the unsignalized intersections (i.e., level of service) and on the peak hour volume signal warrant – warrant #3 – described in the *California Manual on Uniform Traffic Control Devices* (MUTCD). This method provides an indication of whether traffic conditions and peak hour traffic levels are, or would be, sufficient to justify installation of a traffic signal.

The peak hour signal warrant is intended for use at locations where traffic conditions are such that for a minimum of one hour of an average day, the minor-street traffic suffers undue delay when entering or crossing the major street. Accordingly, in the peak-hour signal warrant for SSSC intersections, the side street represents the 'minor' street.

The project is said to create an adverse effect on an unsignalized intersection if the LOS of a controlled movement degrades from LOS E or better to LOS F, or at intersections where a controlled movement already operates at LOS F, one of the following:

- Project traffic results in satisfaction of the peak hour volume traffic signal warrant;
- Project traffic increases minor movement delay by more than 30 seconds; or
- Where the peak hour volume signal warrant is met without project traffic and delay cannot be measured, the project increases traffic by 10 or more vehicles per lane on the controlled approach.

Unlike signalized intersections, which typically represent constraint points for the roadway network, unsignalized intersections rarely limit the potential capacity of a roadway. The determination of appropriate improvements to unsignalized intersections typically includes a qualitative and quantitative analysis of movement delay, traffic signal warrants, movement traffic volumes, availability of alternate routes, and intersection safety. For this reason, improvements to unsignalized intersections are frequently determined on the basis of professional judgment.

## Summary of Housing Element EIR VMT Analysis

The Housing Element EIR concluded that the VMT from the Housing Element would be significant and unavoidable at both the project and cumulative level, even after implementation of mitigation measures. The Housing Element EIR disclosed that development consistent with the Housing Element Update would reduce the home-based VMT per resident, with an average of 22.3 VMT per resident in 2040, but that home-based VMT would exceed the threshold of significance of 15.0 (i.e., 15 percent below the Alameda County 2040 No Project Average home-based VMT per capita).

The Housing Element Update includes Mitigation Measure (MM) TRANS-2 to reduce VMT. MM TRANS-2 requires individual housing project development proposals that do not screen out from a VMT impact analysis to provide a quantitative VMT analysis using the methodology used for the Draft Program Housing Element EIR and, if results indicate the VMT associated with the individual housing project would be above the threshold, that project would be required to include VMT reduction measures. Under MM TRANS-2, projects resulting in a significant impact may implement Transportation Demand Management (TDM) measures and/or physical measures to reduce VMT. The Housing Element EIR determined that because the effectiveness of the VMT reduction measures in reducing an individual development project's VMT impact to a less than significant level could not be confirmed, implementation of MM TRANS-2 would not be sufficient to reduce impacts to less than significant levels. VMT impacts would remain significant and unavoidable even with mitigation incorporated.

## Project VMT Analysis

Senate Bill (SB) 743 has changed the primary metric for identifying transportation impacts under the California Environmental Quality Act (CEQA). Whereas the metric had been vehicle level of service (LOS), it's now daily vehicle-miles travelled (VMT). The City of Pleasanton VMT Policy for residential projects was established in the Housing Element EIR. The policy defines the process by which to determine a project's impact on VMT. The process entails first conducting a screening analysis for the project. If the project cannot be screened out, then the project's effect on VMT needs to be evaluated by means of a detailed VMT analysis. The proposed project does not meet the screening criteria.

Project VMT was evaluated based on data from the Housing Element EIR to estimate project VMT per capita for year 2040. City staff has stated that the Housing Element EIR clears 28 units on the project site. The project is proposing 27 units. Housing Element EIR employed the Alameda County Transportation Commission (Alameda CTC) model to estimate project VMT against the City's established threshold of significance to determine if the project would impact VMT. Residential developments like this project are evaluated in terms of VMT per capita (or per home-based VMT per resident).

According to the Housing Element EIR, the 2040 project VMT threshold of significance for residential developments in Pleasanton is 15 percent below the Alameda County average home-based VMT per resident. The Alameda County average home-based VMT per resident is 17.6. The threshold for the project is then 85 percent of that, or 15.0. The home-based VMT per capita identified in Housing Element EIR shows that the 2040 VMT per capita is 39.9 in the traffic analysis zone in which the project is located.

Because the project is smaller than what was previously approved in the Housing Element EIR (27 units proposed versus 28 units cleared), the project would not result in an overall VMT from the project site that is higher than what was previously environmentally cleared. The reduction in housing units by the project relative to the Housing Element EIR results in a lower overall VMT from the project site (i.e. fewer units means less VMT from the site, overall). However, since the VMT metric used in the Housing Element EIR to determine a significant impact is an "average per capita," the average VMT per capita for a 27-unit project would be no different than it would be for 28 units. Therefore, the Housing Element EIR's reported 39.9 average VMT per capita from the project site is also applicable to the proposed project. As required by the Housing Element EIR methodology, a detailed assessment of project VMT was evaluated using the Alameda CTC VMT Reduction Calculator Tool (see Appendix A). The project would include two measures that would reduce VMT - Measure 3D which provides a 0.1% reduction for "Bike Parking," and Measure 4B which provides a 1.3% reduction for "Pedestrian Facility Improvement" (sidewalk construction along the project frontage). Including these measures, the Project VMT per capita would be reduced to 39.3, but still exceed the 15.0 threshold of significance. The project would therefore have a significant adverse transportation impact on VMT under CEQA. The Housing Element EIR states:

*Mitigation Measure (MM) TRANS-2 requires individual housing project development proposals that do not screen out from a VMT impact analysis to provide a quantitative VMT analysis using the methodology used for this Draft Program EIR analysis and, if results indicate the VMT associated with the individual housing project would be above the threshold, it would be required to include VMT reduction measures. Projects which result in a significant impact may implement Transportation Demand Management (TDM) measures and physical measures to reduce VMT.*

*Because the effectiveness of the VMT reduction measures in reducing an individual development project's VMT impact to a less than significant level cannot be confirmed in this analysis, the impact would remain significant and unavoidable with mitigation.*

The project's VMT per capita would exceed the threshold set forth in the Housing Element EIR. However, this impact was identified in the Housing Element EIR and it was determined to be significant and unavoidable with mitigation. The project is proposing two measures to reduce VMT. This would comply with Mitigation Measure TRANS-2, which states that the project is required to implement VMT reduction measures.

## Existing Transportation Setting

Local access to the project site is provided via Vineyard Avenue, Thiessen Street and Manoir Lane. These roadways are described below.

*Vineyard Avenue* is an east/west two-lane roadway that extends from Bernal Avenue at the west end to State Route 84 at the east end, with a two-way center left turn lane fronting the site. Vineyard Avenue has Class II bike lanes on both sides with no sidewalks and no curb & gutter in the vicinity of the site. Parking is prohibited on both sides of Vineyard Avenue in the vicinity of the site. Vineyard Avenue provides direct access to the site via Thiessen Street and Manoir Lane.

*Thiessen Street* is a two-lane north/south local street that extends from Vineyard Avenue at the north end to a cul-de-sac at the south end. The cul-de-sac provides access to private streets and driveways across from, and south of, the Old Vineyard Avenue Trail (the trail is described in a later section). Motor vehicle access to the Old Vineyard Avenue Trail is blocked by bollards. The intersection of Thiessen Street and the trail is stop-controlled on all approaches. Thiessen Street borders the west side of the site. It has curb & gutter on both sides, with sidewalks on the east side (directly fronting the site) but for a short gap in the sidewalk midway along Thiessen Street. Parking is permitted on street except for a short section on the east side opposite Vineyard Heights Lane. Thiessen Street would provide direct access to the project site.

*Manoir Lane* is a two-lane north/south local street that extends from Vineyard Avenue at the north end and ends in a cul-de-sac at the south end, about 20 feet north of the Old Vineyard Avenue Trail. Manoir Lane borders the east side of the site. It has curb & gutter and sidewalk on both sides, except for a short section on the west side south of Finch Place. Parking is permitted on both sides except for a southern section of Manoir Lane on the west side.

*Frontage Road.* There is a one-lane, one-way eastbound frontage road at the south end of the site between the site and the Old Vineyard Avenue Trail. Access to the frontage road is currently blocked by bollards at the entrance from the Thiessen Street cul-de-sac. The frontage road would otherwise provide access from the cul-de-sac on Thiessen Street to the cul-de-sac on Manoir Lane. The frontage road does not connect to the site or the trail, except by pedestrian path at the Manoir Lane cul-de-sac. The frontage road has no sidewalks and no parking on either side.

## Bicycle Facilities

The bicycle facilities in the City of Pleasanton are identified and described in the *City of Pleasanton Bicycle & Pedestrian Master Plan, 2018*. The existing and planned bicycle facilities in the immediate vicinity of the project are described below.

Vineyard Avenue has existing Class II bike lanes from Bernal Avenue to SR 84.

Old Vineyard Avenue Trail is an existing Class I shared-use path/trail extending from north of the intersection at Vineyard Avenue and Pietronave Lane to Mingoia Street to the east where the trail ends and turns into Machado Place. Between Vineyard Terrace and Mingoia Street, the trail is crossed at several locations where the public streets turn into private streets on the south side of the trail. In the vicinity of the site, the streets that cross the trail are Thiessen Street, Frog Hill Lane, and Safreno Way/Tuscany Place. All of these crossings are stop controlled on all approaches (including the trail) and bollards are in place to block motor vehicle access to the trail.

## Pedestrian Facilities

Most local streets in the immediate vicinity of the site have sidewalks, with the few exceptions as described previously. Vineyard Avenue, the principal access to the site, does not have sidewalks.

As described above, the Old Vineyard Avenue Trail is a Class I shared-use path from north of the intersection at Vineyard Avenue and Pietronave Lane to Mingoia Street east of the site.

The signalized intersection at Vineyard Avenue & Pietronave Lane/Yolanda Court has crosswalks on all approaches with curb ramps and pedestrian-actuated pedestrian-crossing phases on all approaches. The intersection is directly accessible on foot or by bike via the Old Vineyard Avenue Trail. The intersection is approximately one-half mile from the site.

## Transit Service

Existing transit service in the area is provided by the Livermore Amador Valley Transit Authority (LAVTA). LAVTA currently provides school bus service on Vineyard Avenue between Ruby Hill and schools in Pleasanton.

Bus Line 601 will, in Fall 2024, provide bus service between Ruby Hill and Pleasanton Middle School, via Vineyard Avenue and Bernal Avenue. Route 601 will operate one westbound bus in the AM peak hour departing Ruby Hill at 7:50 AM and arriving at Pleasanton Middle School at 8:30 AM. Wednesday times are approximately 60 minutes later. In the PM peak hour, Route 601 will operate one eastbound bus departing Pleasanton Middle School at 3:15 and arriving at Ruby Hill at approximately 3:50 PM. The bus stop nearest the site is located at the intersection of Vineyard Avenue and El Capitan Drive/Montevino Drive one mile west of the site.

Bus Line 611 will, in Fall 2024, provide bus service between Ruby Hill, Vintage Hills and Amador Valley High School, via Vineyard Avenue, Stanley Boulevard and Main Street/Santa Rita Road. Route 611 will operate one westbound bus in the AM peak hour departing Ruby Hill at 7:30 AM and arriving at Amador Valley High School at 8:10 AM. Wednesday and Thursday times are 20 minutes later. In the PM peak hour, Route 611 will operate one eastbound bus departing Amador Valley High School at 3:35 PM and arriving at Ruby Hill at approximately 4:15 PM. The bus stop nearest the site is located at the intersection of Vineyard Avenue and El Capitan Drive/Montevino Drive one mile west of the site.

The San Francisco Bay Area Rapid Transit (BART) District provides heavy-rail, regional transit service in four Bay Area counties, including Alameda, Contra Costa, San Francisco, and San Mateo via five rail lines, operating approximately between 5:00 AM and 1:00 AM, with departures every 20 minutes. The Dublin/Pleasanton BART station is located approximately five miles from the project site.

## Existing Traffic Observations

Traffic conditions in the field were observed in order to identify existing operational deficiencies and to confirm the accuracy of calculated levels of service. The purpose of this effort was (1) to identify any existing traffic problems that may not be directly related to intersection level of service, and (2) to identify any locations where the level of service calculation does not accurately reflect level of service in the field.

Observations in the field showed no issues that would adversely affect level of service at the study intersections or otherwise suggest that the calculated levels of service are not representative of conditions in the field. However, several of the unsignalized study intersections on Vineyard Avenue currently have limited sight distance for minor street traffic.

The speed limit on Vineyard Avenue in the vicinity of the site is 45 miles per hour east of the intersection at Vineyard Avenue and Pietronave Lane/Yolanda Court. It was observed in the field at the unsignalized study intersections that, looking west (along Vineyard Avenue) from the minor streets, the sight distance for northbound left and right turns is less than ideal because of landscaping partially obscuring the line of sight. Achieving adequate sight distance sometimes requires vehicles to pull past the stop bar into the bike lane. City staff have reviewed the collision data at all of the unsignalized study intersections and determined that there have been no collisions at any of these locations in the past 3 years. In order to improve sight distance at these locations, the landscaping would need to be cleared back from Vineyard Avenue.

**Recommendation 1:** At the unsignalized study intersections along Vineyard Avenue, the City should field review and cut back the landscaping where appropriate in order to ensure adequate sight distance from the minor streets.

## Project Traffic Estimates

The magnitude of traffic produced by a new development, and the locations where that traffic would appear, are typically estimated using a three-step process: (1) trip generation, (2) trip distribution, and (3) trip assignment. In determining project trip generation, the magnitude of traffic entering and exiting the site was estimated for the weekday AM and PM peak hours. As part of the project trip distribution step, an estimate was made of the directions to and from which the project trips would travel. In the project trip assignment step, the project trips were assigned to specific streets and intersections in the study area. These procedures are described further in the following sections.

Through empirical research, data have been collected that correlate common land uses to their propensity for producing traffic. Thus, for the most common land uses there are standard trip generation rates that can be applied to help predict the future traffic increases that would result from a new development. Project trip generation was estimated by applying to the size and use of the development the appropriate trip generation rates published by the Institute of Transportation Engineers (ITE) in *Trip Generation, 11th Edition*.

Trip generation for the project was estimated by combining the ITE trip generation rates for single family homes (ITE code 210) and ADUs (represented by ITE code 220 for multi-family units). Accordingly, the project would generate 437 daily vehicle trips, with 30 trips occurring during the AM peak hour and 39 trips occurring during the PM peak hour. The project trip generation is shown in Table 1.

The project trip distribution was determined from existing travel patterns near the site, as measured by recent traffic counts of vehicle movements to and from Vineyard Avenue by residential uses at the study intersections. From the counts, it was estimated that 75 percent of project trips would travel to and from the west. The remainder would travel to and from the east. The trip assignment is shown on Figure 3.

**Table 1  
Project Trip Generation Estimates**

Land Use	Size	Daily		AM Peak Hour				PM Peak Hour			
		Rate <sup>1</sup>	Trips	Rate <sup>1</sup>	Trips	In	Out	Rate <sup>1</sup>	Trips	In	Out
Residential Project	27 units	16.17	437	1.10	30	8	22	1.45	39	25	14

<sup>1</sup>Rates based on ITE Trip Generation, 11th Edition for Single Family Detached Housing (LU code 210) and Multi Family Housing (LU code 220).

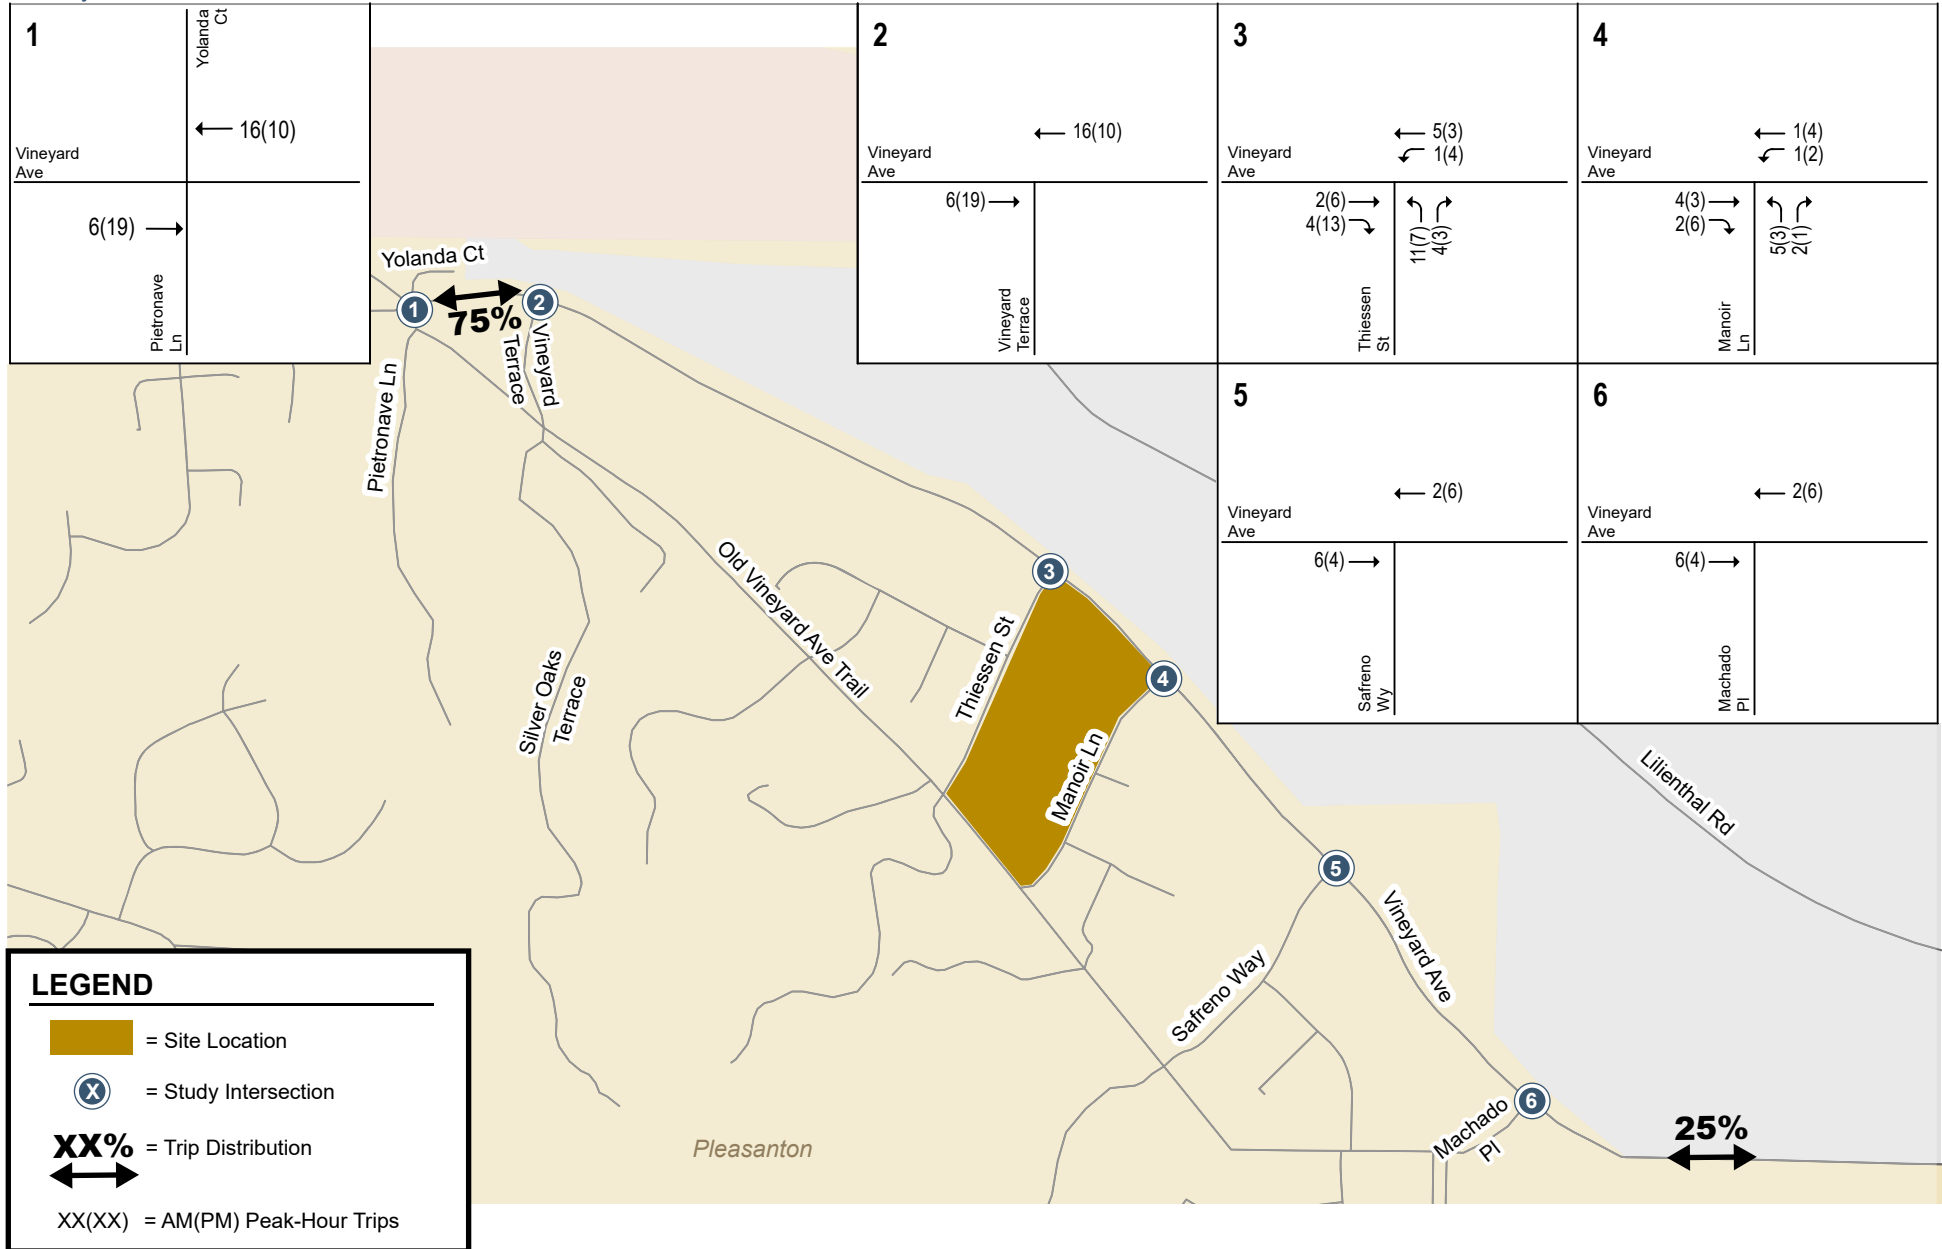

## Existing Traffic Volumes and Roadway Network

Traffic volumes for the unsignalized intersections were determined from existing traffic counts conducted in August 2024. Existing traffic volumes at the signalized intersection of Pietronave Lane & Vineyard Avenue were obtained from February 2024 counts by the city. The existing volumes are shown on Figure 4. Existing plus project traffic conditions are represented by existing traffic volumes plus project trips on the existing roadway network. Existing plus project volumes are shown on Figure 5. The count data are included in Appendix B.

Project Trip Assignment and Trip Distribution

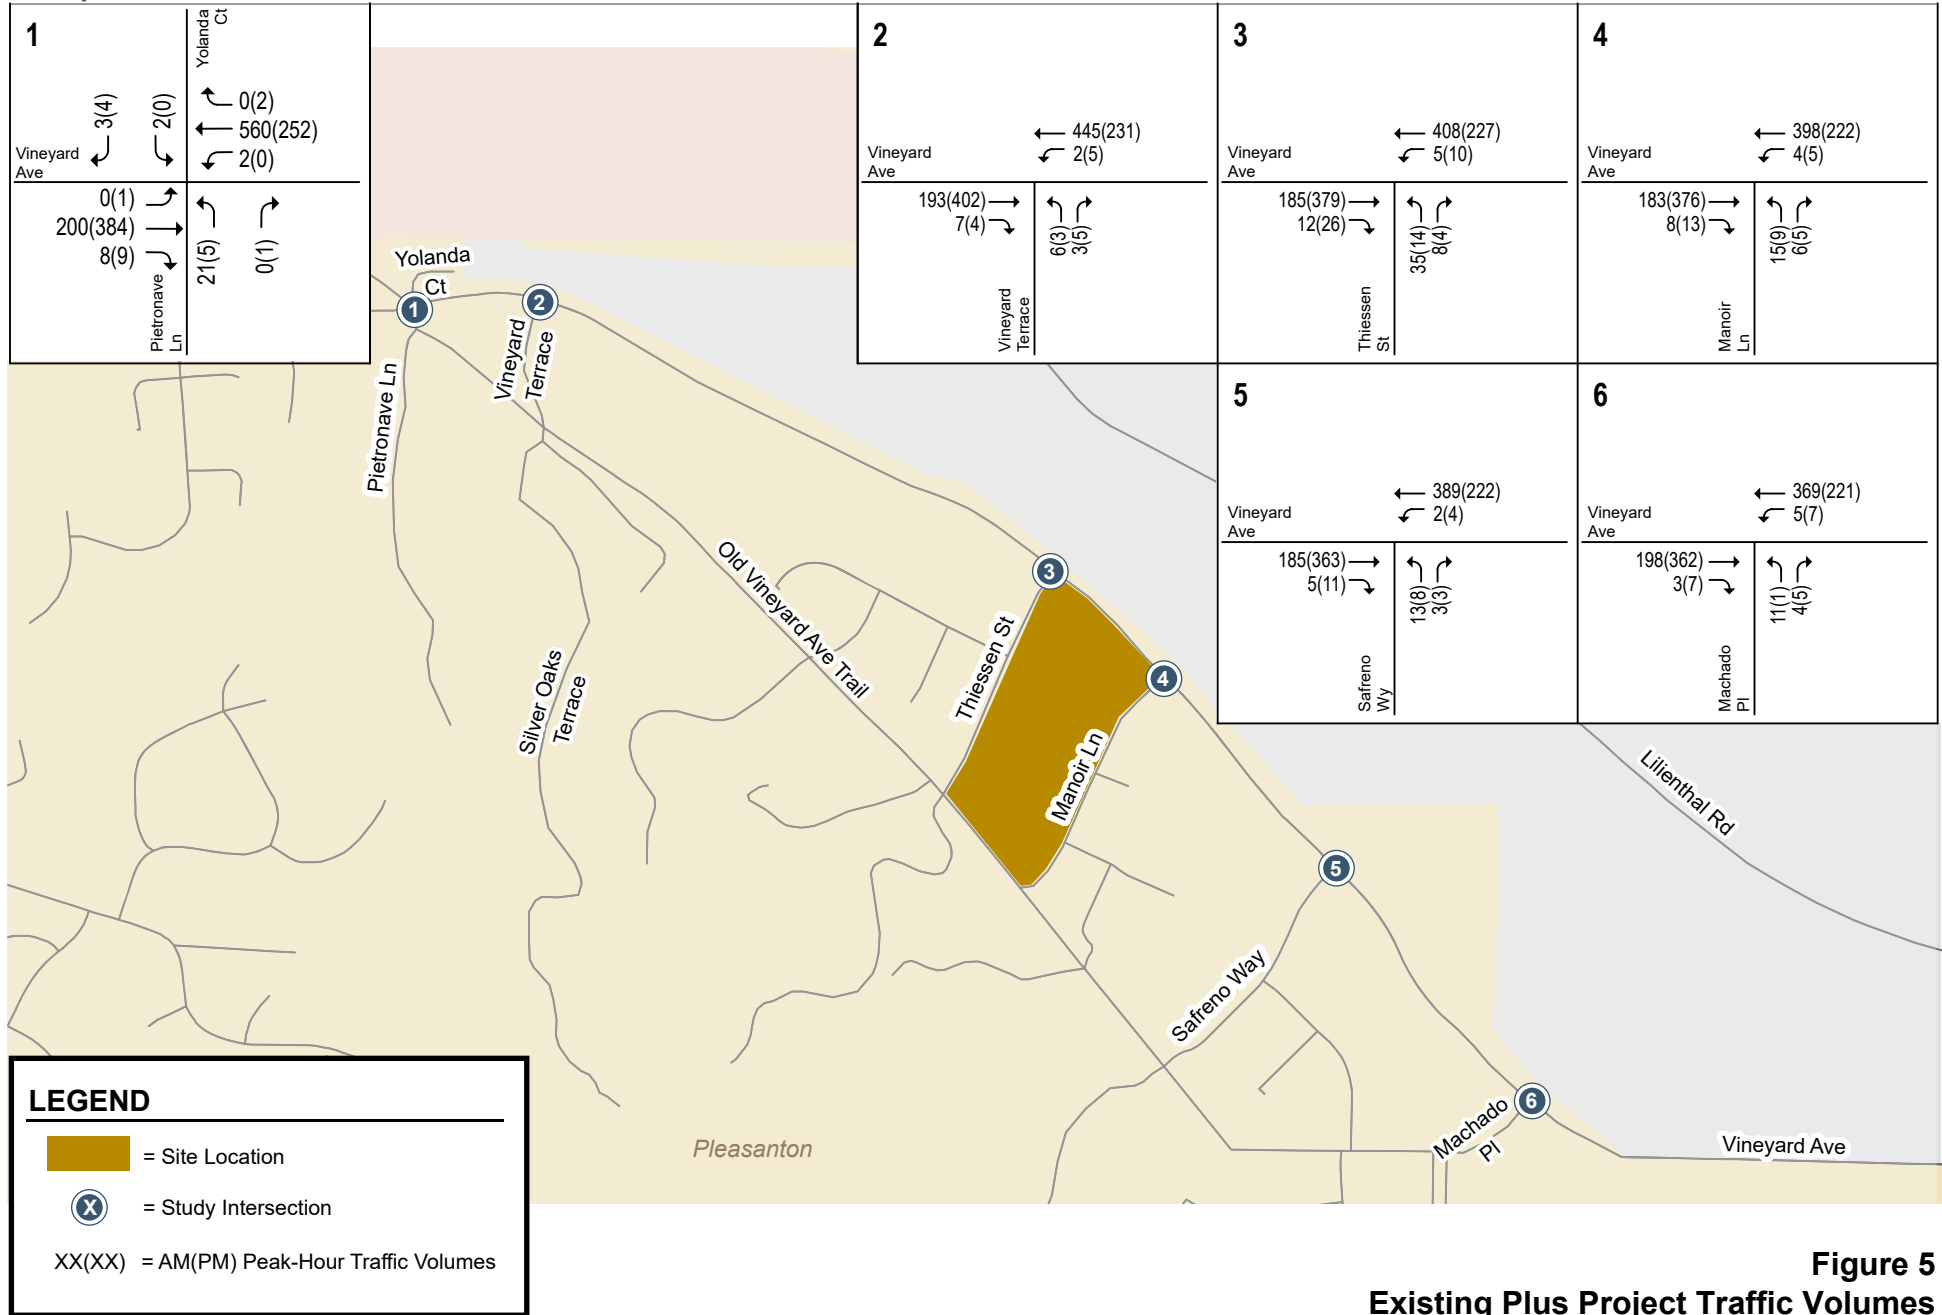

1 Vineyard Avenue Residential

**Figure 4**  
**Existing Traffic Volumes**

1 Vineyard Avenue Residential

**Figure 5**  
**Existing Plus Project Traffic Volumes**

## Existing Conditions Intersection Levels of Service

Intersection levels of service were calculated for both signalized and unsignalized intersections under existing and existing plus project conditions. The results of the intersection level of service analysis under these scenarios are summarized in Table 2. The level of service calculations are included in Appendix C.

**Table 2**  
**Existing and Existing plus Project Intersection Levels of Service**

Intersection	Traffic Control	Peak Hour	Count Date <sup>1</sup>	Existing		Existing + Project		
				Delay <sup>2</sup>	LOS <sup>2</sup>	Delay <sup>2</sup>	LOS <sup>2</sup>	Change in Delay
<b>Signalized Intersection</b>								
Vineyard Ave & Pietronave Ln/Yolanda Ct	signal	AM	2/29/24	3.1	A	3.2	A	0.1
		PM	2/28/24	2.5	A	2.5	A	0.0
<b>Unsignalized Intersections</b>								
Vineyard Ave & Vineyard Terrace	SSSC	AM	8/22/24	0.2/13.2	A/B	0.2/13.4	A/B	0.0/0.2
		PM	8/22/24	0.2/12.0	A/B	0.2/12.3	A/B	0.0/0.3
Vineyard Ave & Thiessen St	SSSC	AM	8/22/24	0.7/13.9	A/B	1.0/14.2	A/B	0.3/0.3
		PM	8/22/24	0.3/13.9	A/B	0.5/14.2	A/B	0.2/0.3
Vineyard Ave & Manoir Lane	SSSC	AM	8/22/24	0.3/12.9	A/B	0.5/13.1	A/B	0.2/0.2
		PM	8/22/24	0.2/12.7	A/B	0.4/13.1	A/B	0.2/0.4
Vineyard Ave & Safreno Way	SSSC	AM	8/22/24	0.4/13.4	A/B	0.4/13.5	A/B	0.0/0.1
		PM	8/22/24	0.3/13.0	A/B	0.3/13.1	A/B	0.0/0.1
Vineyard Ave & Machado Place	SSSC	AM	8/22/24	0.4/13.0	A/B	0.4/13.1	A/B	0.0/0.1
		PM	8/22/24	0.2/11.2	A/B	0.2/11.3	A/B	0.0/0.1
<p>Note 1: Intersection levels of service were determined using Synchro traffic analysis software, based on the Highway Capacity Manual (HCM) methodology.</p> <p>Note 2: City of Pleasanton LOS standard for signalized intersections is LOS D. The LOS standard for unsignalized intersections is LOS E for the side-street controlled movement at the intersection.</p> <p><sup>1</sup> Traffic counts for the intersection of Vineyard Ave &amp; Pietronave Ln/Yolanda Court were obtained from the City of Pleasanton. The remainder were conducted for this study.</p> <p><sup>2</sup> Signalized intersection levels of service and delays reported are for average control delay per vehicle. The intersection levels of service and delays reported for the side-street-stop-controlled (SSSC) intersections are reported for both the overall average delay/ the approach with highest delay.</p>								

The results of the existing conditions analysis show that, during the AM and PM peak hours, all study intersections currently operate at acceptable levels of service and would continue to do so after the project is completed. These findings apply to both the signalized and unsignalized study intersections.

## Cumulative Conditions Intersection Levels of Service

Cumulative traffic volumes (without the project) were estimated using forecasts from the City of Pleasanton travel demand forecast (TDF) model under the city's 2040 Buildout scenario. The

Pleasanton TDF model includes various local and regional transportation improvements outside of the project area, none of which would directly affect the traffic conditions reported here. There are no planned improvements at the study intersections under buildout conditions.

Project trips were added to the cumulative (without the project) traffic volumes to estimate the cumulative with project traffic volumes. Cumulative with project conditions were evaluated relative to cumulative conditions without the project in order to determine potential project effects. Traffic volumes under cumulative conditions without and with the project are shown on Figures 6 and 7, respectively.

Intersection levels of service were calculated for both signalized and unsignalized intersections under cumulative without project and cumulative with project conditions. The level of service results for cumulative conditions are summarized in Table 3. The level of service calculations are included in Appendix C.

**Table 3  
Cumulative without Project and Cumulative with Project Intersection Levels of Service**

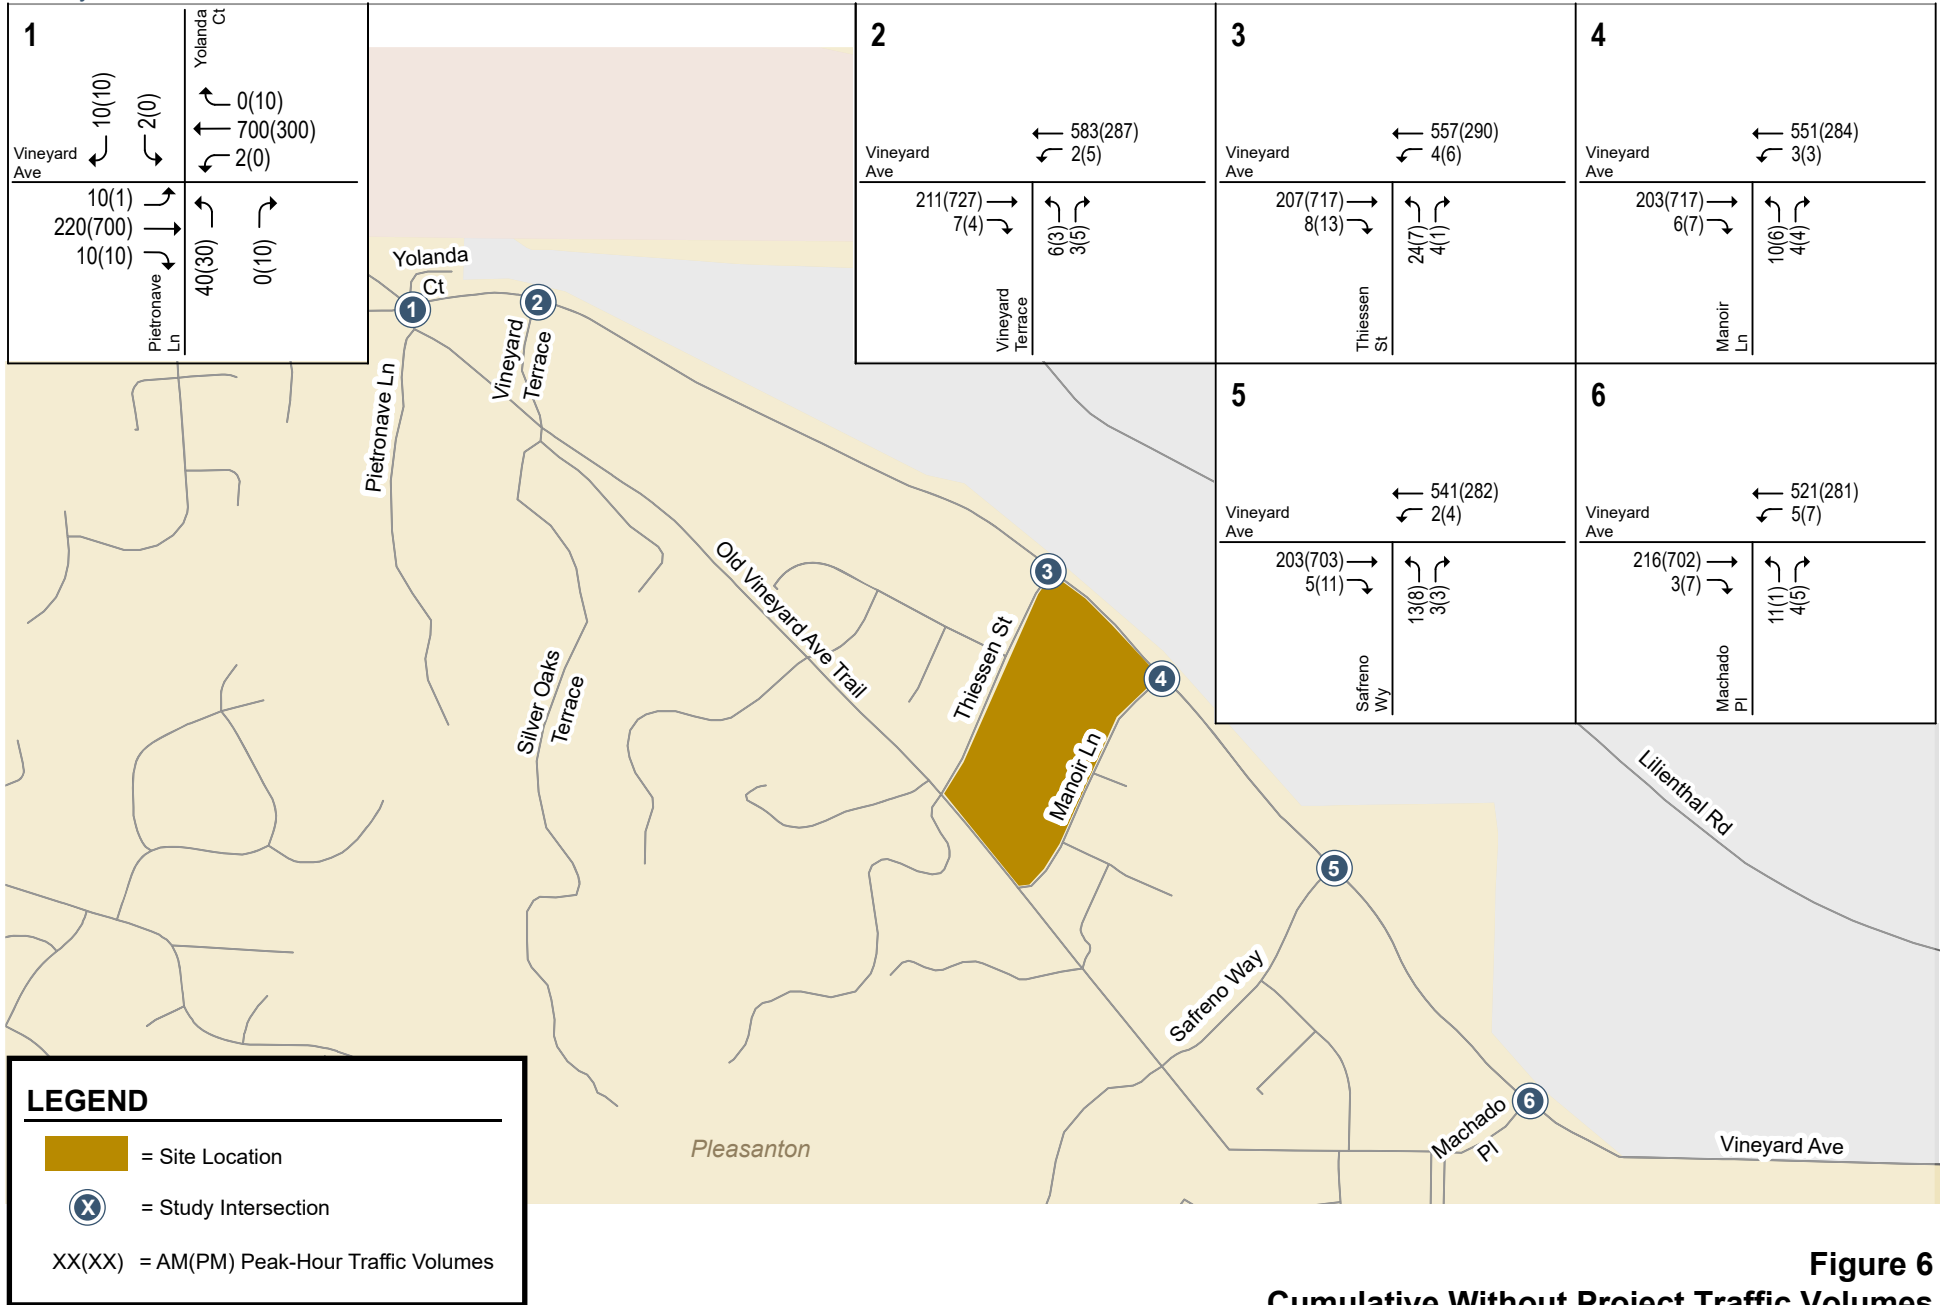

Intersection	Traffic Control	Peak Hour	Cumulative without Project		Cumulative with Project		
			Delay <sup>1</sup>	LOS <sup>1</sup>	Delay <sup>1</sup>	LOS <sup>1</sup>	Change in Delay
<b>Signalized Intersection</b>							
Vineyard Ave & Pietronave Ln/Yolanda Ct	signal	AM	4.0	A	4.1	A	0.1
		PM	4.0	A	4.0	A	0.0
<b>Unsignalized Intersections</b>							
Vineyard Ave & Vineyard Terrace	SSSC	AM	0.2/15.6	A/C	0.2/16.0	A/C	0.0/0.4
		PM	0.2/17.6	A/C	0.2/18.1	A/C	0.0/0.5
Vineyard Ave & Thiessen St	SSSC	AM	0.6/16.8	A/C	0.9/17.4	A/C	0.3/0.6
		PM	0.2/22.4	A/C	0.5/23.3	A/C	0.3/0.9
Vineyard Ave & Manoir Lane	SSSC	AM	0.3/15.2	A/C	0.5/15.6	A/C	0.2/0.4
		PM	0.2/19.3	A/C	0.3/20.3	A/C	0.1/1.0
Vineyard Ave & Safreno Way	SSSC	AM	0.4/16.1	A/C	0.4/16.3	A/C	0.0/0.2
		PM	0.3/20.2	A/C	0.3/20.5	A/C	0.0/0.3
Vineyard Ave & Machado Place	SSSC	AM	0.4/15.5	A/C	0.4/15.6	A/C	0.0/0.1
		PM	0.2/15.8	A/C	0.2/15.9	A/C	0.0/0.1

Note 1: Intersection levels of service were determined using Synchro traffic analysis software, based on the Highway Capacity Manual (HCM) methodology.

Note 2: City of Pleasanton LOS standard for signalized intersections is LOS D. The LOS standard for unsignalized intersections is LOS E for the side-street controlled movement at the intersection.

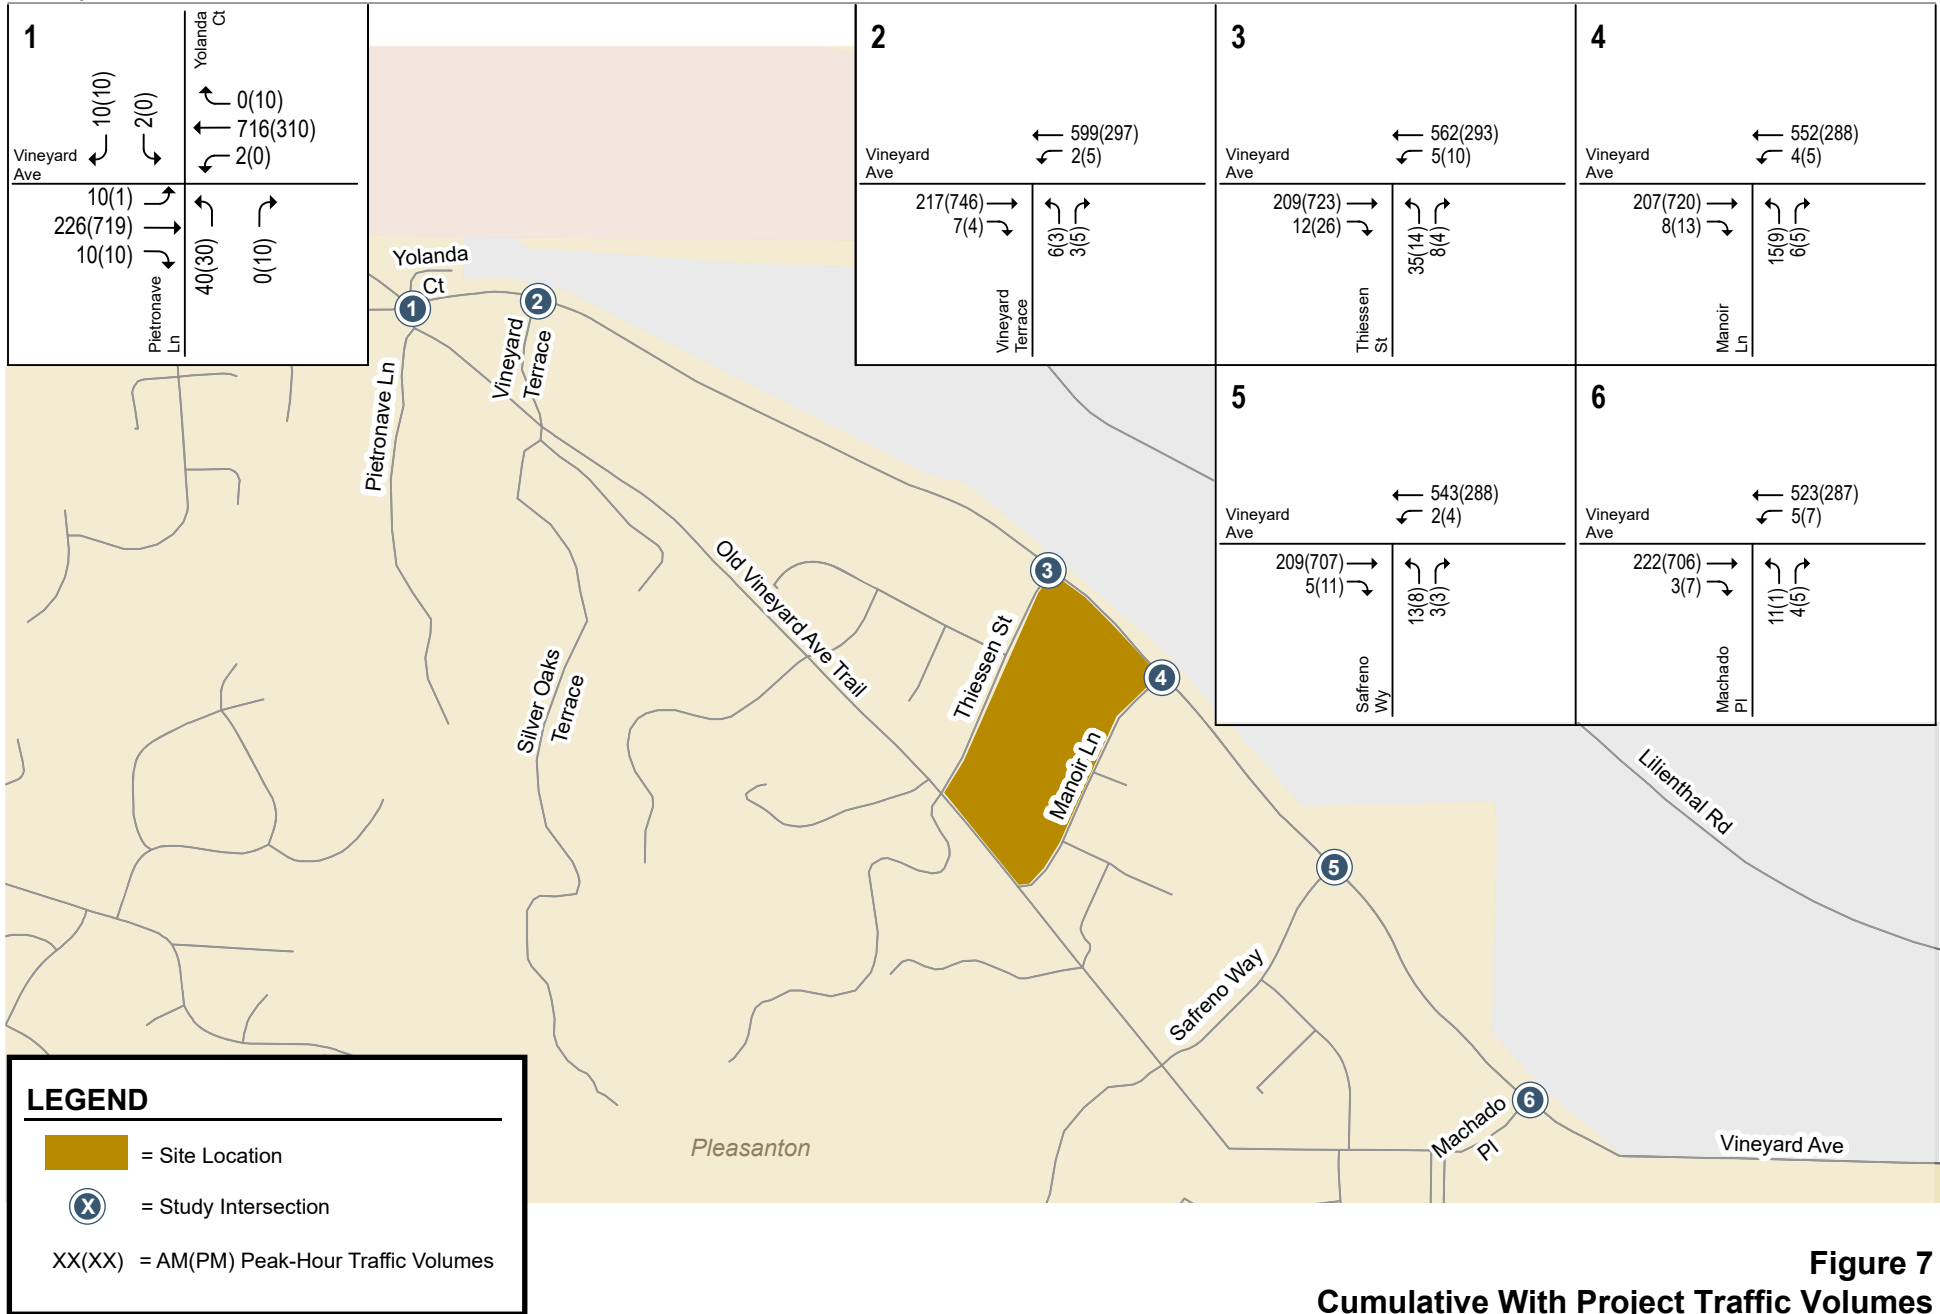

<sup>1</sup> Signalized intersection levels of service and delays reported are for average control delay per vehicle. The intersection levels of service and delays reported for the side-street-stop-controlled (SSSC) intersections are reported for both the overall average delay / the approach with highest delay.

1 Vineyard Avenue Residential

**Figure 6**  
Cumulative Without Project Traffic Volumes

1 Vineyard Avenue Residential

**Figure 7**  
Cumulative With Project Traffic Volumes

The results of the cumulative conditions analysis show that, during the AM and PM peak hours, all study intersections would operate at acceptable levels of service under cumulative conditions without and with the project. These findings apply to both the signalized and unsignalized study intersections.

## Signal Warrants

A signal warrant analysis was conducted for the five unsignalized intersections: Vineyard Avenue & Vineyard Terrace, Vineyard Avenue & Thiessen Street, Vineyard Avenue & Manoir Lane, Vineyard Avenue & Safreno Way, and Vineyard Avenue & Machado Place.

The peak hour signal warrant was established based on the number of available gaps in traffic on the main street (which for this study, was Vineyard Avenue). The existing traffic on Vineyard Avenue is approximately 600 vehicles per hour. According to the chart shown in Appendix D, the side street volume would need to be at or above 175 vehicles in the peak hour to meet the warrant. This applies to all the unsignalized intersections under existing conditions. At Buildout, the expected volumes on Vineyard Avenue would be around 1000 vehicles per hour. The chart shows that, under Buildout, the side street volume would need to be at or above 75 vehicles in the peak hour to meet the warrant. The highest volume on any of the five side streets is around 40 vehicles per hour under all study scenarios.

Accordingly, the results of the signal warrant analysis indicate that none of the five intersections would meet the peak-hour warrant criteria under any of the analysis scenarios. The signal warrant summary tables are included in Appendix D.

## Vehicle Queuing

A vehicle queuing analysis was conducted for the high-demand turn movements that serve project traffic. The movements evaluated were the westbound left turns from Vineyard Avenue onto southbound Thiessen Street and westbound left turns from Vineyard Avenue onto southbound Manoir Lane, for all four study scenarios. The results of the queuing analysis are shown in Tables 4 and 5. Refer to the site access section below for a description of vehicle queuing at the site driveway.

Consistent with observations in the field, the queuing analysis showed that there is adequate vehicle storage for the aforementioned turn movements.

## Site Access

The project site plan, by CBG Engineers, dated July 1, 2024, is shown on Figure 2. The site is bounded by Vineyard Avenue to the north, Thiessen Street to the west, The Old Vineyard Avenue Trail to the south, and Manoir Lane to the east.

### Site Driveways

The proposed site has one driveway on Thiessen Street that would provide access to the interior of the site. The nine residential units fronting Manoir Lane and the one unit fronting Thiessen Street would have their own private driveway on their respective streets.

The site driveway (A Street) on Thiessen Street is located approximately 500 feet south of Vineyard Avenue. The driveway is shown to be 36 feet wide curb to curb. The driveway provides one lane in each of the westbound and eastbound directions with a single lane from which to exit the site on Thiessen Street. The driveway throat depth (distance from the public street to the first residential driveway on site) is approximately 60 feet.

### Vehicle Queuing at Driveways

Vehicle queuing was assessed for the outbound vehicular movements at the site driveway (A Street). Approximately 10 to 15 project trips would exit Street A onto Thiessen Street during the AM and PM peak hours. These volumes equate to approximately one outbound trip onto northbound Thiessen Street every 4 to 6 minutes during peak hours.

Traffic volumes on Thiessen Street and Manoir Lane were observed to be very low. Given that Thiessen Street effectively dead-ends at the cul-de-sac, there would be a negligible number of outbound left turns from the site driveway onto Thiessen Street. Similarly, there would likely be no northbound (inbound) right turns into the site driveway. Overall, vehicle delays at the site driveway would be of minimal duration. The outbound vehicle queues would rarely exceed one vehicle, such that blockage of access to the westernmost residences would be very infrequent.

### Sight Distance at Driveways

Vehicle sight distance was evaluated for the project driveway (A Street). Thiessen Street is currently approximately 35 feet wide with parking permitted on street except for a short section on the east side opposite Vineyard Heights Lane. Given the de facto 25-mile-per-hour speed limit for local streets, and the low volume of traffic on Thiessen Street, the sight distance at the driveway would be adequate. It's advisable that on-street parking be prohibited within approximately 25 feet of the site driveway.

**Recommendation 2:** Parking should be prohibited within approximately 25 feet of A Street on Thiessen Street.

## Site Circulation

The onsite circulation system consists of two drive aisles. The aforementioned A Street is shown to extend approximately 200 feet eastward from Thiessen Street where it terminates in a T-intersection at B Court—the one other street on site. A Street is a two-lane east-west street and B Court is a two-lane north-south street. Both streets are shown to be 36 feet wide and have parallel parking on both sides. The parallel parking stalls are shown to be 7 feet wide, leaving 22 feet for vehicular travel (11-foot wide lanes in each direction). The City's *Objective Design Standards (ODS) for Housing Sites* state that travel lanes should be 11 feet wide and parallel parking stalls should be 7 feet wide when parking is allowed on both sides of the street.

Therefore, the street and parallel parking widths proposed comply with the standards set forth in the City's ODS.

B Court starts at the northern border of the site and extends southward approximately 600 feet, ending in a cul-de-sac at the southern border of the site. The precise radius of the cul-de-sac is not specified on the project plans, but it would be adequate to accommodate turn-around maneuvers by passenger vehicles. The north segment of B Court would extend about 80 feet north of its intersection with A Street and dead-end. While dead-end aisles are generally undesirable, the proposed dead-end would be relatively short, and should not create any material operational issues.

### **Parking On-Site**

The project proposes to provide parking as follows: five spaces per residential unit (135 total spaces), 33 guest spaces on site, 25 guest spaces on Thiessen Street, and 19 guest spaces on Manoir Lane, for a total of 212 parking spaces. Except for the private (non-guest) parking spaces, all parking spaces are parallel stalls. Within the guest parking allocation, there would be four handicap-accessible parking spaces, the specific locations of which are not identified on the site plan. The City of Pleasanton Municipal Code (18.88.030) states that each single-family unit, and each condominium unit, shall have at least 2 parking spaces. Because each single-family unit includes an ADU, a conservative interpretation of this policy would be 4 parking spaces per unit. The project includes 5 spaces per residential unit, and therefore, complies with City code.

The City's parking code does not require that visitor parking be provided for single-family units, but the project's visitor parking supply would include 33 spaces on site, and 44 spaces on Thiessen Street and Manoir Lane. This should be more than adequate to accommodate guest parking.

### **Emergency Vehicles and Trucks**

The site plan does not include the truck turning templates that would show the adequacy of the on site circulation system to accommodate trucks, garbage collection, and emergency vehicles. However, a visual examination of the site street layout shows that the turning radii would likely be sufficient to meet city standards, except at the B Court cul-du-sac, which is shown to accommodate parking. The adequacy of this design will need to be confirmed by City staff and/or an applicant-provided exhibit showing truck turning templates.

**Recommendation 3:** The project applicant should coordinate with city staff to ensure the on site drive aisles and cul-du-sac conform to city standards for fire services and trucks. Truck turning templates may be used to confirm adequacy.

### **Loading**

The site plan does not show designated loading areas. It's assumed that all loading would be provided on the streets on site or on Thiessen Street and Manoir Lane for those units fronting the streets. This would be acceptable given the infrequency of truck traffic and low traffic volumes on site and the adjacent streets.

**Recommendation 4:** The project applicant should coordinate with city staff to ensure the project meets the requirements for trash collection.

## Pedestrian Facilities On-Site

All streets on site – A Street and B Court – are shown on the site plan to have sidewalks. The sidewalks on A Street provide direct access to the sidewalk on the east side of Thiessen Street. The units fronting Thiessen Street and Manoir Lane would have direct access to the existing sidewalks, or new sidewalks provided by the project along these frontages. The project would close all existing gaps in the sidewalks on Thiessen Street and Manoir Lane along the project frontages. Onsite, the volume of traffic and speeds would be sufficiently low to permit shared usage of the streets with autos, bikes, and pedestrians.

The site plan does not show any detail for the park/open space or the pedestrian paths to/from and within it. Generally, it would be desirable for the project to include pedestrian links so that units on each side of the development have convenient pedestrian access to existing neighborhoods located to the east and west, as well as to the Old Vineyard Avenue Trail.

**Recommendation 5:** The site plan should show the layout of the park and open space, including pedestrian connectivity within the site and to/from the sidewalks off site. Additional pedestrian paths should be considered within the development to link the units on each side of the project to Manoir Lane and Thiessen Street, as well as the Old Vineyard Avenue Trail.

The site plan shows curb ramps on the southwest and northwest corners of the onsite intersection of A Street and B Court. Curb ramps are also shown on the northeast and southeast corners of the intersection of Thiessen Street and A Street.

The widths of the sidewalks proposed are not shown for all streets on the current plan, but the plan provides a typical street cross section indicating 6-foot wide sidewalks internal to the site. The City's ODS standards state that 6-foot wide sidewalks are to be provided along perimeter frontages and internal streets.

**Recommendation 6:** The site plan does not show the widths of proposed sidewalks along the project frontages. The City's ODS standards state that 6-foot wide sidewalks are required. This should be reviewed by City staff for compliance prior to final design.

## Bike Parking

The site plan does not show bicycle parking, but the plan indicates that short-term bicycle parking will be located in the park/open space. The site plan includes a tabulation of proposed bicycle parking on site – four short-term spaces. This meets and exceeds the city's ODS requirements for two short-term bicycle parking spaces per 50 residential units. The ODS also states that all long-term bicycle parking spaces can be provided in private garages. The project conforms with this requirement.

**Recommendation 7:** The site plan should show the location of short-term bicycle parking within the site.

## Pedestrian, Bicycle and Transit Impacts

### Pedestrians & Bicycles

Existing pedestrian and bicycle activity in the project vicinity was reviewed for Thiessen Street and Manoir Lane at their intersections with Vineyard Avenue. Field observations, as well as pedestrian and bicycle counts at these two intersections showed that pedestrian and bicycle

traffic at the intersections are light. Recent pedestrian counts showed only 2 pedestrians along Vineyard Avenue at Manoir Lane in the AM peak hour. Other than that, no pedestrians were counted at these intersections during either peak hour. Recent bicycle counts showed just 5 bicycles in the AM peak hour at each of Thiessen Street and Manoir Lane (along Vineyard Avenue). In the PM peak hour 6 bicycles were counted at each intersection. There are no complementary land uses (retail, office, schools, etc.) in close proximity to the project site. Thus, the expected volume of pedestrian and bike trips from the project would be very low, with most of these trips occurring for recreational purposes.

There presently are sidewalks along the east side of Thiessen Street and both sides of Manoir Lane. There are currently gaps in the sidewalks on these streets along the project frontage, which the project would close. The Old Vineyard Avenue Trail is a shared-use path from north of the Vineyard Avenue at Yolanda Court intersection to Mingoia Street/Heinz Ranch Court. It is expected that, with the existing all-way stops and bollards at the previously described trail crossings, the existing safety conditions at the trail crossings would be preserved.

As stated previously, Class II bike lanes are currently provided on both sides of Vineyard Avenue directly adjacent to the site. There are no further improvements planned for bicycle facilities along Vineyard Avenue in the vicinity of the project site. Thiessen Street and Manoir Lane do not currently have bike lanes, but the volume and speed of traffic on these streets are suitable for shared use between bikes and motor vehicles.

The Alameda County Congestion Management Program (CMP) Transportation Impact Analysis Technical Guidelines state that a project would create an impact on pedestrian and bike circulation if: (1) its vehicle trips would present a barrier to bikes/pedestrians safely crossing roadways, or (2) it would reduce or sever existing or planned bike/pedestrian circulation in the area. The analysis shows that the addition of project trips (1) would not present a barrier to bikes or pedestrians safely crossing the local streets adjacent to the site, and (2) the project would not preclude any planned modifications to the bike/pedestrian network. Based on these criteria, the proposed project would not create an adverse impact to bike/pedestrian circulation in the area.

### **Transit Service**

As described previously, transit service available to the site is provided by the Livermore Amador Valley Transit Authority (LAVTA), operator of the Wheels bus system in the Tri-Valley. The site is served by bus lines 601 and 611, both of which provide school bus service along Vineyard Avenue. For both routes, the bus stop nearest the site is located at the intersection of Vineyard Avenue and El Capitan Drive/Montevino Drive one mile west of the site. Other than these routes, there is no transit service in the project vicinity, which is expected given the relatively low density of the surrounding residential areas. As such, nearly all commute trips to and from the project site would likely occur via automobile.

According to the Alameda County (CMP) Transportation Impact Analysis Technical Guidelines, a project would create an impact on transit service if it: (1) causes vehicular congestion that would significantly degrade transit operations, (2) causes a ridership increase that would exceed existing transit capacity, or (3) conflicts with existing transit service plans or precludes future transit service to the project area. The proposed project would not cause any of these criteria to be met. Given the low density of the project and its location, the project would generate very few transit trips, with most transit demand likely occurring to and from BART (park and ride trips). The number of vehicle trips generated by the proposed project would be relatively low, resulting in negligible delays for bus service in Pleasanton. In addition, the project

would not remove any existing transit facilities nor conflict with any adopted plans. Therefore, the proposed project would not cause a significant impact to transit operations in the study area.

## Conclusions

The effects of the proposed project were evaluated in accordance with the procedures and guidelines specified by the City of Pleasanton. Our findings are summarized below.

- The project's VMT per capita would exceed the threshold set forth in the Housing Element EIR. However, this impact was identified in the Housing Element EIR and it was determined to be significant and unavoidable with mitigation. The project is proposing two measures to reduce VMT. This would comply with Housing Element EIR Mitigation Measure TRANS-2, which states that the project is required to implement VMT reduction measures.
- The proposed project would not result in any significant impacts to pedestrian, bike, or transit facilities.
- The proposed project would not result in any adverse effects to signalized or unsignalized study intersections.
- The project site plan was reviewed for site circulation and access. Generally, the site circulation and access would be adequate, pending implementation of several recommendations.

In addition, this report produced the following recommendations

1. At the unsignalized study intersections along Vineyard Avenue, the City should field review and cut back the landscaping where appropriate in order to ensure adequate sight distance from the minor streets.
2. Parking should be prohibited within approximately 25 feet of A Street on Thiessen Street.
3. The project applicant should coordinate with city staff to ensure the onsite drive aisles and cul-du-sac conform to city standards for fire services and trucks. Truck turning templates may be used to confirm adequacy.
4. The project applicant should coordinate with city staff to ensure the project meets the requirements for trash collection.
5. The site plan should show the layout of the park and open space, including pedestrian connectivity within the site and to/from the sidewalks off-site. Additional pedestrian paths should be considered within the development to link the units on each side of the project to Manoir Lane and Thiessen Street, as well as the Old Vineyard Trail.
6. The site plan does not show the widths of proposed sidewalks along the project frontages. The City's ODS standards state that 6-foot wide sidewalks are required. This should be reviewed by City staff for compliance prior to final design.
7. The site plan should show the location of short-term bicycle parking within the site.

## 4B. Pedestrian Facility Improvement

Level of application: **Neighborhood/City**  
 Type of VMT affected: **All neighborhood/city trips**  
 Max VMT reduction: **3.4%**

[Return to Main](#)   
[Results Summary](#)

This strategy will increase the sidewalk coverage to improve pedestrian access. Providing sidewalks and an enhanced pedestrian network encourages people to walk instead of drive. This mode shift results in a reduction in VMT and GHG emissions. When improving sidewalks, a best practice is to ensure they are contiguous and link externally with existing and planned pedestrian facilities. Barriers to pedestrian access and interconnectivity, such as walls, landscaping buffers, and slopes, should be minimized. The strategy is based on the share of vehicle trips which could easily shift to walking - on average, approximately 21.4 percent of vehicle trips are 1 mile or less (3).

Existing sidewalk length in study area (miles)	0.4	user input
Existing street length in study area (miles)	0.4	user input

# **Appendix D**

## **Signal Warrant Sheets**

**Vineyard Avenue & Vineyard Terrace**

\* NOTE: 100 vph applies as the lower threshold volume for a minor street approach with 2 or more lanes and 75 vph applies as the lower threshold volume for a minor street approach with 1 lane.

**Peak Hour Volume Warrant Per 2014 MUTCD - Over 40 MPH**

		Approach Lanes		AM Peak Hour Volumes			
		2 or One More		Existing	Existing + Project	Cumulative	Cumulative w/Project
Major Street - Both Approaches	Vineyard Ave	x		625	647	803	825
Minor Street - Highest Approach	Vineyard Terrace	x		9	9	9	9
Warrant Met?				no	no	no	no

		Approach Lanes		PM Peak Hour Volumes			
		2 or One More		Existing	Existing + Project	Cumulative	Cumulative w/Project
Major Street - Both Approaches	Vineyard Ave	x		613	642	1023	1052
Minor Street - Highest Approach	Vineyard Terrace	x		8	8	8	8
Warrant Met?				no	no	no	no

**Vineyard Avenue & Thiessen Street**

\* NOTE: 100 vph applies as the lower threshold volume for a minor street approach with 2 or more lanes and 75 vph applies as the lower threshold volume for a minor street approach with 1 lane.

**Peak Hour Volume Warrant Per 2014 MUTCD - Over 40 MPH**

		Approach Lanes		AM Peak Hour Volumes			
		2 or One More		Existing	Existing + Project	Cumulative	Cumulative w/Project
Major Street - Both Approaches	Vineyard Ave	x		598	610	776	788
Minor Street - Highest Approach	Thiessen St	x		28	43	28	43
Warrant Met?				no	no	no	no

		Approach Lanes		PM Peak Hour Volumes			
		2 or One More		Existing	Existing + Project	Cumulative	Cumulative w/Project
Major Street - Both Approaches	Vineyard Ave	x		616	636	1026	1052
Minor Street - Highest Approach	Thiessen St	x		8	18	8	18
Warrant Met?				no	no	no	no

**Vineyard Avenue & Manoir Lane**

\* NOTE: 100 vph applies as the lower threshold volume for a minor street approach with 2 or more lanes and 75 vph applies as the lower threshold volume for a minor street approach with 1 lane.

**Peak Hour Volume Warrant Per 2014 MUTCD - Over 40 MPH**

		Approach Lanes		AM Peak Hour Volumes			
		2 or One More		Existing	Existing + Project	Cumulative	Cumulative w/Project
Major Street - Both Approaches	Vineyard Ave	x		585	593	763	771
Minor Street - Highest Approach	Manoir Lane	x		14	21	14	21
Warrant Met?				no	no	no	no

		Approach Lanes		PM Peak Hour Volumes			
		2 or One More		Existing	Existing + Project	Cumulative	Cumulative w/Project
Major Street - Both Approaches	Vineyard Ave	x		601	616	1011	1026
Minor Street - Highest Approach	Manoir Lane	x		10	14	10	14
Warrant Met?				no	no	no	no

**Vineyard Avenue & Safreno Way**

\* NOTE: 100 vph applies as the lower threshold volume for a minor street approach with 2 or more lanes and 75 vph applies as the lower threshold volume for a minor street approach with 1 lane.

**Peak Hour Volume Warrant Per 2014 MUTCD - Over 40 MPH**

		Approach Lanes		AM Peak Hour Volumes			
		2 or One More		Existing	Existing + Project	Cumulative	Cumulative w/Project
Major Street - Both Approaches	Vineyard Ave	x		573	581	751	759
Minor Street - Highest Approach	Safreno Way	x		16	16	16	16
Warrant Met?				no	no	no	no

		Approach Lanes		PM Peak Hour Volumes			
		2 or One More		Existing	Existing + Project	Cumulative	Cumulative w/Project
Major Street - Both Approaches	Vineyard Ave	x		590	600	1000	1010
Minor Street - Highest Approach	Safreno Way	x		11	11	11	11
Warrant Met?				no	no	no	no

**Vineyard Avenue & Machado Place**

\* NOTE: 100 vph applies as the lower threshold volume for a minor street approach with 2 or more lanes and 75 vph applies as the lower threshold volume for a minor street approach with 1 lane.

**Peak Hour Volume Warrant Per 2014 MUTCD - Over 40 MPH**
