

DELTA/LAKE DEL VALLE

# CITY OF PLEASANTON Water Supply Sources and Transmission System

**ZONE 7 TREATMENT PLANTS**  
Zone 7 filters and disinfects surface water at its treatment plants, and disinfects well water before delivering it to Pleasanton.

Chlorine

The City purchases water from Zone 7 in underground vaults, called turnouts, where water from Zone 7 is pushed into the City's system and is controlled, fluoridated, and metered.

Fluoridation

Treated water storage is located throughout the city strategically for emergencies.

TREATED WATER STORAGE  
DISINFECTION CHEMICALS

TREATED WATER STORAGE  
DISINFECTION CHEMICALS

In summer, peak demands are often met by Zone 7 wells.

The water coming from your tap is a blend of several different sources. The percentage from each source varies from location to location in the City and from season to season. 100% of water is purchased from Zone 7 Water Agency, most of which comes from the Delta, Lake Del Valle, and local wells.

\*In 2023, 100% of Pleasanton's water was purchased from Zone 7. Pleasanton wells are available in case of emergency.
